Thank you for purchasing an Olympus digital camera. Before you start to use your new camera, please read these instructions carefully to enjoy optimum performance and a longer service life. Keep this manual in a safe place for future reference.

We recommend that you take test shots to get accustomed to your camera before taking important photographs.

The screen and camera illustrations shown in this manual were produced during the development stages and may differ from the actual product.

If there are additions and/or modifications of functions due to firmware update for the camera, the contents will differ. For the latest information, please visit the Olympus website.
This notice concerns the supplied flash unit and is chiefly directed to users in North America.

Information for Your Safety

IMPORTANT SAFETY INSTRUCTIONS

When using your photographic equipment, basic safety precautions should always be followed, including the following:

• Read and understand all instructions before using.
• Close supervision is necessary when any flash is used by or near children. Do not leave flash unattended while in use.
• Care must be taken as burns can occur from touching hot parts.
• Do not operate if the flash has been dropped or damaged - until it has been examined by qualified service personnel.
• Let flash cool completely before putting away.
• To reduce the risk of electric shock, do not immerse this flash in water or other liquids.
• To reduce the risk of electric shock, do not disassemble this flash, but take it to qualified service personnel when service or repair work is required. Incorrect reassembly can cause electric shock when the flash is used subsequently.
• The use of an accessory attachment not recommended by the manufacturer may cause a risk of fire, electric shock, or injury to persons.

SAVE THESE INSTRUCTIONS

Indications used in this manual
The following symbols are used throughout this manual.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>

<tr>
<td>📚 Reference pages describing details or related information.</td>
<td></td>
</tr>
</tbody>
</table>
Unpack the box contents

The following items are included with the camera. If anything is missing or damaged, contact the dealer from whom you purchased the camera.

- Flash case
- Computer software CD-ROM
- Instruction manual
- Warranty card

![Image of camera, body cap, strap, USB cable, and AV cable](image)

- Flash FL-LM2
- Lithium ion battery BLN-1
- Lithium ion charger BCN-1

Attaching the strap

1. Thread the strap in the direction of the arrows.

2. Lastly, pull the strap tight making sure that it is fastened securely.

- Attach the other end of the strap to the other eyelet in the same way.
Charging and inserting the battery

1 Charging the battery.

<table>
<thead>
<tr>
<th>Charging indicator</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Charging in progress</td>
<td>Lights orange</td>
</tr>
<tr>
<td>Charging complete</td>
<td>Off</td>
</tr>
<tr>
<td>Charging error</td>
<td>Blinks orange</td>
</tr>
</tbody>
</table>

(Charging time: Up to approximately 4 hours)

⚠️ Cautions
• Unplug the charger when charging is complete.

2 Loading the battery.

3 Closing the battery compartment cover.

Removing the battery
Turn off the camera before opening or closing the battery compartment cover.
To remove the battery, first push the battery lock knob in the direction of the arrow and then remove.

⚠️ Cautions
• Contact an authorized distributor or service center if you are unable to remove the battery. Do not use force.

⚠️ Notes
• It is recommended to set aside a backup battery for prolonged shooting in case the battery in use drains.
Inserting and removing cards

1 Loading the card.
   - Open the card slot cover.
   - Slide the card in until it is locked into place.
   - “Card basics” (P. 103)

   **Cautions**
   - Turn off the camera before loading or removing the card.

2 Closing the card slot cover.
   - Close the cover until you hear a click.

   **Cautions**
   - Be sure the card slot cover is closed before using the camera.

---

**Removing the card**
Press the inserted card lightly and it will be ejected. Pull out the card.

**Cautions**
- Do not remove the battery or card while the card write indicator (P. 31) is displayed.

---

**Eye-Fi Cards**
- Use the Eye-Fi card in compliance with the laws and regulations of the country where the camera is used.
- Remove the Eye-Fi card from the camera or select [Off] for [Eye-Fi] (P. 93) in airplanes and other locations in which use is prohibited.
- Eye-Fi cards may become hot during use.
- The drain on the battery may increase when Eye-Fi cards are used.
- Camera response may slow when Eye-Fi cards are used.
Attaching a lens to the camera

1 Attach a lens to the camera.

   ① Rear cap
   ②

   • Align the lens attachment mark (red) on the camera with the alignment mark (red) on
     the lens, then insert the lens into the camera’s body.
   • Rotate the lens in the direction indicated by the arrow until you hear it click.

Cautions
• Make sure the camera is turned off.
• Do not press the lens release button.
• Do not touch internal portions of the camera.

2 Remove the lens cap.

Using lenses with an UNLOCK switch
Retractable lenses with an UNLOCK switch can not
be used while retracted.
Turn the zoom ring in the direction of arrow (①) to
extend the lens (②).
To store, turn the zoom ring in the direction of arrow
(④) while sliding the UNLOCK switch (③).

Removing the lens from the camera
While pressing the lens release button, rotate the
lens in the direction of the arrow.
“Interchangeable lenses” (P. 104)
1 Remove the terminal cover from the flash unit and attach the flash to the camera.
   • Slide the flash unit all the way in, stopping when it contacts the back of the shoe and is securely in place.

2 To use the flash, raise the flash head.
   • Lower the flash head when the flash is not in use.

Removing the Flash Unit
Press the UNLOCK switch while removing the flash unit.
1 Rotate the **ON/OFF** switch to the ON position to turn the camera on.
   - When the camera is turned on, the monitor will turn on.
   - To turn the camera off, rotate the **ON/OFF** switch to OFF.

2 Set the mode dial to **AUTO**.

**Viewfinder (P. 30)**
The viewfinder turns on and the monitor turns off automatically when you put your eye to the viewfinder.

**Monitor**
The super control panel (P. 22) will be displayed.

**Adjusting Viewfinder Focus**
Look through the viewfinder and rotate the dial until the display is in sharp focus.

**Using the Monitor**
You can adjust the angle of the monitor.
Setting the date/time

Date and time information is recorded on the card together with the images. The file name is also included with the date and time information. Be sure to set the correct date and time before using the camera.

1 Display the menus.
   - Press the **MENU** button to display the menus.

2 Select [③] in the [①] (setup) tab.
   - Use ▲▼ to select [①] and press ▶.
   - Select [③] and press ▶.

3 Set the date and time.
   - Use ◀▶ to select items.
   - Use ▲▼ to change the selected item.
   - Use ▲▼ to select the date format.

4 Save settings and exit.
   - Press ☑ to set the camera clock and exit to the main menu.
   - Press the **MENU** button to exit the menus.

</tbody>
</table>

■ Taking photographs during movie recording

- To take a photograph during movie recording, press the shutter button. Press the ◎ button to end recording. Three files will be recorded to the memory card: the movie footage preceding the photograph, the photograph itself, and the movie footage following the photograph.
- Only one photograph can be taken at a time during movie recording; the self-timer and flash can not be used.

⚠️ Cautions

- Image size and quality for photographs are independent of movie frame size.
- The autofocus and metering used in movie mode may differ from that used to take photographs.
- The ◎ button can not be used to record movies in the following instances: shutter button pressed halfway/during bulb or time photography/Sequential shooting/PANORAMA/3D/multiple exposure, etc. (still photography also ends)
Taking photographs/shooting movies

1 Frame a picture in the viewfinder.
   - The monitor turns off and the display in the viewfinder lights up.
   - Be careful that your fingers or the camera strap do not obstruct the lens.

![Horizontal grip and Vertical grip]

   - Press the shutter button halfway.
   - The AF confirmation mark (● or ○) will be displayed and focus will lock.

<table>
<thead>
<tr>
<th>Lenses that supports Hi-Speed Imager AF*</th>

</thead>
<tbody>
<tr>
<td>Lenses with other Four Thirds mounts</td>
</tr>
</tbody>
</table>

* Visit our website for more information.

- The shutter speed and aperture value that have been set automatically by the camera are displayed.
- If the in-focus indicator blinks, the subject is not in focus. (P. 98)

2 Adjust the focus.
   - Lightly press the shutter button down to the first position (press the shutter button halfway).

   - Pressing the shutter button halfway and all the way down

   The shutter button has two positions. The act of lightly pressing the shutter button to the first position and holding it there is called “pressing the shutter button halfway,” that of pressing it all the way down to the second position “pressing the shutter button all (or the rest of) the way down.”
3 Release the shutter.

**Taking photographs**
Press the shutter button all the way (fully).
• The shutter sounds and the picture is taken.

**Recording movies**
Release the shutter button and press the 
button to begin recording.
Press the 
button again to end recording.

■ **Framing subjects in the monitor**
Press the button to display the subject in the monitor. Press the button again to switch back to the original display.

**Notes**
• The camera can be configured to switch between the viewfinder and monitor displays either automatically or manually. Press and hold the button until the automatic display toggle menu is displayed and select an option using . Pressing the button toggles between the monitor and viewfinder displays.
• If no operations are performed for a minute, the camera enters “sleep” (stand-by) mode to turn off the monitor and to cancel all actions. The camera activates again when you touch any button (the shutter button, button, etc.). The camera will turn off automatically if left in sleep mode for 4 hours. Turn the camera on again before use.
• Automatic display selection is not available in the following instances.
  3D photography/During live bulb photography

**Cautions**
• If the camera is used for extended periods, the temperature of the image pickup device will rise and noise and colored fog may appear in images recorded at high ISO sensitivities. Choose a lower ISO sensitivity or turn the camera off for a short period.

**Tips**
Changing the delay before the camera enters sleep mode. [Sleep] (P. 88)/
Choosing a viewfinder display style. [Built-in EVF Style] (P. 92)
Viewing Images

■ Single-frame playback

- Press the ▶ button to display your most recent photograph or movie.
- Use the sub dial or arrow pad to view other pictures.

<table>
<thead>
<tr>
<th>Sub dial</th>
<th>Arrow pad</th>
</tr>
</thead>
</table>
| Displays the previous frame | ![Image]
| Displays the next frame | ![Image]

■ Close-up playback

Rotate the main dial to ◀ to zoom in on a picture in single-image playback, or to ◀ to display the image full frame.

■ Index display/Calendar display

- When the image is displayed full frame, rotating the main dial to ◀ displays thumbnail images. Rotating the dial multiple times brings you to calendar playback.
- Rotate the main dial to ◀ to return to full-frame playback.

■ Movie playback

Select a movie and press ◀ to display the playback menu. Select [Movie Play] and press ◀ to begin playback. To interrupt movie playback, press MENU.
**Volume**

Volume can be adjusted by pressing ▲ or ▼ during single-frame and movie playback.

**Erasing images**

Display an image you want to delete and press ▼. Select [Yes] and press Q. You can also select multiple images for deletion.

**Protecting images**

Protect images from accidental deletion. Display an image you wish to protect and press the Fn2 button; a ▲ icon will appear on the image. Press the Fn2 button again to remove protection. You can also protect multiple selected images.

**Cautions**

- Formatting the card erases all images even if they have been protected.
Using art filters

1 Rotate the mode dial to ART.
• A menu of art filters will be displayed. Select a filter using \( \Delta \) \( \nabla \).
• Press \( \circ \) or press the shutter button halfway to select the highlighted item and exit the art filter menu.

Types of art filters

- Pop Art
- Soft Focus
- Pale&Light Color
- Light Tone
- Grainty Film
- Pin Hole
- Diorama
- Cross Process
- Gentle Sepia
- Dramatic Tone
- Key Line
- ART BKT (ART bracketing)

2 Shoot.
• To choose a different setting, press \( \circ \) to display the art filter menu.

ART bracketing
Each time the shutter is released, the camera creates copies for all art filters. Use the \( \text{[] \[} \) option to choose filters.

Art effects
Art filters can be modified and effects can be added. Pressing \( \text{[+] \[} \) in the art filter menu displays additional options.

Modifying filters
Option I is the original filter, while options II and on add effects that modify the original filter.

Adding effects*
Soft focus, pin-hole, frames, white edges, starlight
* The effects available vary with the selected filter.

Cautions
- If [RAW] is currently selected for image quality, image quality will automatically be set to [\( \text{[+]} \) \( \text{[+] \[} \)]. The art filter will be applied to the JPEG copy only.
- Depending on the subject, tone transitions may be ragged, the effect may be less noticeable, or the image may become more “grainy.”
- Some effects may not be visible in live view or during movie recording.
- Playback may differ according to the filters, effects, or movie quality settings applied.
Shooting in scene mode

1 Rotate the mode dial to SCN.
   • A menu of scene menu will be displayed. Select a scene using △ ▽.
   • Press ◀ or press the shutter button halfway to select the highlighted option and exit the scene menu.

Types of scene modes

- Portrait
- e-Portrait
- Landscape
- Landscape+Portrait
- Sport
- Night Scene
- Night+Portrait
- Children
- High Key
- Low Key
- DIS Mode
- Macro
- Nature Macro
- Candle
- Sunset
- Documents
- Panorama (P. 60)
- Fireworks
- Beach & Snow
- Fisheye Effect
- Wide-angle
- Macro
- 3D 3D Photo (P. 61)

2 Shoot.
   • To choose a different setting, press ◀ to display the scene menu.

Cautions

- In [e-Portrait] mode, two images are recorded: an unmodified image and a second image to which [e-Portrait] effects have been applied. The unmodified image is recorded using the option currently selected for image quality, the modified copy at an image quality of JPEG (M-quality (2560 × 1920)).
- [Fisheye Effect], [Wide-angle], and [Macro] are for use with optional converter lenses.
- Movies cannot be recorded in [e-Portrait], [Panorama], or [3D Photo] mode.
Movie mode (Movie mode) can be used to film movies with special effects.

1 Rotate the mode dial to Movie mode.

2 Press ▼ or ▲.

<table>
<thead>
<tr>
<th>▼ Multi Echo</th>
<th>Apply an after-image effect. After-images will appear behind moving objects.</th>
</tr>
</thead>
<tbody>
<tr>
<td>▲ One Shot Echo</td>
<td>An after-image will appear for a short time after you press the button. The after-image will disappear automatically after a while.</td>
</tr>
</tbody>
</table>

- Movie effects will be displayed in the monitor.
- Pressing the button again when [Multi Echo] is selected cancels the effect. If [One Shot Echo] is selected, the effect is updated each time the button is pressed.

3 Press the shutter button to start recording.
- Press ▼ or ▲ to enable or disable movie effects during recording.

⚠️ Cautions
- The frame rate will drop slightly during recording.
- The 2 effects can not be applied simultaneously.
- Use a memory card with an SD speed class of 6 or better. Movie recording may end unexpectedly if a slower card is used.
- Taking a photograph during movie recording cancels the effect; the effect does not appear in the photograph.
Using live guides

Live guides are available in iAUTO (iAUTO) mode. While iAUTO is a full auto mode, live guides make it easy to access a variety of advanced photographic techniques.

1. Set the mode dial to iAUTO.
2. After pressing Q to display the live guide, use the △ ▽ buttons on the arrow pad to highlight an item and press Q to select.
3. Use △ ▽ on the arrow pad to choose the level.
   - If [Shooting Tips] is selected, highlight an item and press Q to view a description.
   - Press the shutter button halfway to select.
   - The effect of the selected level is visible in the display. If [Blur Background] or [Express Motions] is selected, the display will return to normal, but the selected effect will be visible in the final photograph.
4. Shoot.
   - Press the shutter button to shoot.
   - To clear the live guide from the display, press the MENU button.

Caution

- If [RAW] is currently selected for image quality, image quality will automatically be set to [N+RAW].
- Live guide settings are not applied to the RAW copy.
- Pictures may appear grainy at some live guide setting levels.
- Changes to live guide setting levels may not be visible in the monitor.
- Frame rates drop when [Blurred Motion] is selected.
- The flash can not be used with the live guide.
- Changes to live guide options cancel previous changes.
- Choosing live guide settings that exceed the limits of the camera exposure meters may result in pictures that are over- or under-exposed.
Using the super control panel

The super control panel lists shooting options and their status. The LV super control panel is displayed when the monitor is used to frame pictures.

Super control panel

Settings that can be modified using super control panel

1. Currently selected option
2. ISO sensitivity ............................................. P. 55
3. Sequential shooting/self-timer .......................... P. 56
4. Flash mode .................................................... P. 65
5. Flash intensity control ................................... P. 66
6. White balance .............................................. P. 50
   White balance compensation ...................... P. 50
7. Picture mode ................................................ P. 52

18. AF mode ..................................................... P. 43
19. AF target .................................................... P. 44
20. Image stabilizer .......................................... P. 49

Cautions

- Not displayed in movie record mode.
### Framing pictures in the viewfinder

When the viewfinder is used to frame photographs, the super control panel will be displayed in the monitor. The panel can be hidden or displayed by pressing the **INFO** button.

1. Press **OK**.
2. Highlight items with △ ▽ ◀◀ or the main dial and use the sub dial to choose an option.
   - To choose an option from a menu, highlight the item and press **OK**.

### Framing pictures in the monitor

When pictures are framed in the monitor, settings can be adjusted using the live control (P. 24) or LV super control panel. Before using the LV super control panel, select [On] for [Control Settings] (P. 87) > [Live SCP].

1. Press **OK**.
   - The live control will be displayed.
2. Press the **INFO** button to display the LV super control panel.
3. Use △ ▽ ◀◀ to highlight the desired item and use the dial to choose an option.
   - To choose an option from a menu, highlight the item and press **OK**.
Basic guide

Using live control

The live control is used to adjust settings when pictures are framed in the monitor. The effects can be viewed in the monitor. In modes other than P/S/A/M/N, you will need to adjust settings in the custom menu (P. 86) before using the live control.

1 Press to display the live control.
   - To hide the live control, press again.

2 Highlight items with , then use or the sub dial to highlight an option and press .
   - The selected settings take effect automatically if no operations are performed for about 8 seconds.

Cautions

- Some items are not available in some shooting modes.

Tips

For information on displaying or hiding the live control. [Control Settings] (P. 87)
Using the Multi-Function Button

When framing pictures in the viewfinder, you can adjust settings quickly using the multi-function button. At default settings, the **Fn2** button is assigned the role of the multi-function button.

### Choosing a function

1. Press and hold the **Fn2** button and rotate the dial.
   - The menus are displayed.

2. Keep rotating the dial to select the desired function.
   - Release the button when the desired function is selected.

### Using multifunction options

Press the **Fn2** button. An option selection dialog will be displayed.

**Using the menus**

1. Press the **MENU** button to display the menus.

   **Menus**
   - Preliminary and basic shooting options
   - Advanced shooting options
   - Playback and retouch options
   - Custom menu
   - Accessory port menu*
   - Camera setup (e.g., date and language)
   * Not displayed at default settings.

2. Use ▲▼ to select a tab and press **OK**.

3. Select an item using ▲▼ and press **OK** to display options for the selected item.

4. Use ▲▼ to highlight an option and press **OK** to select.
   - Press the **MENU** button repeatedly to exit the menu.

**Notes**
- For details on the functions that can be set with the menu, refer to “Menu directory” (P. 111).
- A guide is displayed for about 2 seconds after you select an option. Press the **INFO** button to view or hide guides.

**Tips**
- Camera settings can be customized to your shooting style: Use the custom menus to customize camera settings to your own goals or taste. “Customizing camera settings” (P. 86)
- Using accessory port devices: Settings for the EVF and OLYMPUS PENPAL accessories are accessed from the accessory port menu. This menu is not displayed by default, and you will need to display it before proceeding. “Customizing camera settings” (P. 86)
Using the Touch screen

Use the touch screen during playback or when framing pictures in the monitor. You can also use the touch screen to adjust settings in the super control and LV super control panels.

Live Guides

The touch screen can be used with live guides.

1 Touch the tab and swipe your finger to the left to display live guides.
   • Tap to select items.

2 Use your finger to position the sliders.
   • Press the MENU button to exit the live guide display.

Shooting Mode

You can focus and shoot by tapping the monitor.

Tap to cycle through touch screen settings.

Touch screen operations disabled.

Tap a subject to focus and automatically release the shutter.

Tap to display a focus frame and focus on the subject in the selected area. You can use the touch screen to choose the position and size of the focus frame. Photographs can be taken by pressing the shutter button.

Previewing Your Subject

1 Tap the subject in the display.
   • An AF frame will be displayed.
   • Use the slider to choose the size of the frame.

2 Next, tap to zoom in on the subject in the focus frame.
   • Use your finger to scroll the display.
Playback Mode

Use the touch screen to page through images or zoom in and out.

**Full-Frame Playback**

**Viewing Additional Images**
- Slide your finger to the left to view later frames, right to scroll view earlier frames.
- Keep your finger on the edges of the display to scroll continuously backward or forward through pictures.

**Playback Zoom**
- Slide the bar up or down to zoom in or out.
- Use your finger to scroll the display when the picture is zoomed in.
- Tap to display Index playback. For calendar playback, tap until the calendar is displayed.

**Index/Calendar Playback**

**Page Ahead/Page Back**
- Slide your finger up to view the next page, down to view the previous page.
- Use or to choose the number of images displayed.
- For single-frame playback, tap until the current image is displayed full frame.

**Viewing Images**
- Tap an image to view it full frame.

**Adjusting Settings**

Settings can be adjusted in the super control and LV super control panels.

1. Display the super control panel.
   - Press to display the cursor.
2 Tap the desired item.
   • The item will be highlighted.

3 Rotate the dial to choose an option.

⚠️ Cautions
• The situations in which touch screen operations are not available include the following.
  Movie recording/panorama/3D/e-portrait/multiple exposure/during bulb or time photography/one-touch white balance dialog/when buttons or dials are in use
• In self-timer mode, the timer can be started by tapping the display. Tap again to stop the timer.
• Do not touch the display with your fingernails or other sharp objects.
• Gloves or monitor covers may interfere with touch screen operation.

💡 Tips
Disabling the touch screen. [Touch Screen Settings] (P. 93)

*1 ART or SCN

*2 Displayed if [On] is selected in the [Control Settings] menu (P. 87).
Displaying information during playback

The **INFO** button can be used to choose the information displayed during playback.

- **Image only**
- **Simplified display (P. 32)**
- **Overall display (P. 32)**
- **Light box display**
- **Highlight & Shadow display**
- **Histogram display**

* Displayed when [On] is selected for [Info Settings] > [Info]. (P. 87)

**Histogram display**
Display a histogram showing the distribution of brightness in the image. The horizontal axis gives the brightness, the vertical axis the number of pixels of each brightness in the image. Areas above the upper limit at shooting are displayed in red, those below the lower limit in blue, and the area metered using spot metering in green.

**Highlight & Shadow display**
Areas above the upper limit of brightness for the image are shown in red, those below the lower limit in blue. [Histogram Settings] (P. 88)

**Light box display**
Compare two images side-by-side. Press \(\) to select the image on the opposite side of the display.

- The base image is displayed on the right. Use \(\) or sub dial to highlight an image and press \(\) to move it to the left. The image to be compared to the image on the left can be selected on the right. To choose a different base image, highlight the right frame and press \(\).
- Press **Fn1** to zoom the images in. Rotate the main dial to choose a zoom ratio. When images are zoomed in, use \(\) \(\) \(\) \(\) to scroll and the sub dial to select the image.
Other uses for the INFO button

- **One-touch white balance**
  Select [Q] or [O] for one-touch white balance.

- **Color temperature**
  Select [CWB] to choose the color temperature. (P. 50)

- **Playback zoom**
  Press the INFO button to choose the zoom ratio for the zoom frame display.

- **Highlight and shadow control**
  Highlights and shadows can be adjusted from the exposure compensation dialog. (P. 47)

- **Focal length**
  Select IS mode and choose a focal length for image stabilization. (P. 49)

- **Help**
  Help is displayed automatically about two seconds after an item is selected. To disable help, press the INFO button. Press the INFO button again to re-enable help.

- **Manual flash compensation**
  Flash output can be selected from flash mode manual flash level options. (P. 65)

- **Manual exposure compensation for the zoom display**
  Press the INFO button to preview how the selected shutter speed and aperture affect exposure when you have zoomed in on your subject in mode M (BULB/TIME excluded). Settings can be adjusted using the arrow pad or dial. (P. 45)

- **Face priority AF/AF target mode**
  Press the INFO button in the AF target selection display to use the direction keys to select face-priority or AF target mode. (P. 44)
Restoring default or custom settings

Camera settings can be easily restored to one of three presets.

**Reset:** Restore default settings.

**Myset:** Restore preselected settings for P, A, S, or M mode. The shooting mode does not change. Up to four sets of preselected settings can be stored.

**Quick Myset:** Stored settings take effect while the Fn1 or button is pressed. Shooting mode is adjusted to the preset settings.

Using reset settings

1. Select [Reset/Myset] in shooting menu (P. 111).
2. Select [Reset] and press .
   - Highlight [Reset] and press to choose the reset type. To reset all settings except the time and date, highlight [Full] and press .
   - “Menu directory” (P. 111)
3. Select [Yes] and press .

Saving Myset

1. Adjust settings in order to save.
2. Select [Reset/Myset] in shooting menu (P. 111).
3. Select the desired destination ([Myset1]–[Myset4]) and press .
   - [Set] appears next to destinations ([Myset1]–[Myset4]) to which settings have already been saved. Selecting [Set] again overwrites the registered setting.
   - To cancel the registration, select [Reset].
4. Select [Set] and press .
   - “Menu directory” (P. 111)

Using Myset

1. Select [Reset/Myset] in shooting menu (P. 111).
2. Select the desired settings ([Myset1]–[Myset4]) and press .
3. Select [Set] and press .
Choosing a focus mode (AF mode)

Select a focusing method (focus mode).

1 Display the super control panel or live control and select the AF mode item.

2 Use the sub dial to choose a setting.
   - The selected AF mode is displayed on the monitor.

<table>
<thead>
<tr>

<td></td>
</tr>
</tbody>
</table>

**S-AF (single AF)**

The camera focuses once when the shutter button is pressed halfway. When the focus is locked, a beep sounds, and the AF confirmation mark and the AF target mark light up. This mode is suitable for taking pictures of still subjects or subjects with limited movement.

**C-AF (continuous AF)**

The camera repeats focusing while the shutter button remains pressed halfway. When the subject is in focus, the AF confirmation mark lights up on the monitor and the beep sounds when the focus is locked at the first and second time. Even if the subject moves or you change the composition of the picture, the camera continues trying to focus.

- Four Thirds system lenses focus using [S-AF].

**MF (manual focus)**

This function allows you to manually focus on any subject. [MF Assist] (P. 86): The focus ring can be used for zoom display. [Focus Ring] (P. 86): Choose the \( \infty \) (close up) direction.

**S-AF+MF (simultaneous use of S-AF mode and MF mode)**

After pressing the shutter button halfway to focus in [S-AF] mode, you can turn the focus ring to fine-adjust focus manually.

**C-AF+TR (AF tracking)**

Press the shutter button halfway to focus; the camera then tracks and maintains focus on the current subject while the shutter button is held in this position.

- The AF target is displayed in red if the camera can no longer track the subject. Release the shutter button and then frame the subject again and press the shutter button halfway.

- Four Thirds system lenses focus using [S-AF].

**Tips**

- The [Rls Priority S] (P. 87) and [Rls Priority C] (P. 87) options can be used to choose whether the shutter can be released when the camera is unable to focus.

**Notes**

- “Subjects that are difficult to focus on” (P. 98)
Choosing a focus target (AF target)

Use △ ▽ ← → to select AF targets.
• “All targets” mode is restored if you move the cursor off the screen.
• You can choose from the following 4 target types. Press the INFO button and use △ ▽.

- **All Targets**
  - The camera automatically chooses from the full set of focus targets.

- **Single Target (Standard size, small size)**
  - Select the focus target manually. Set the target size to [ • ]s (small) to further limit the focus position.

- **Group Target**
  - The camera automatically chooses from the targets in the selected group.

**Focus lock**

If the camera is unable to focus on your chosen subject, select single target mode and use focus lock to focus on another subject at about the same distance.

1  In [S-AF] mode, position the AF target over the subject and press the shutter button halfway.
   • Make sure that the AF confirmation mark is lighting up.
   • Focus locks while the shutter button is pressed halfway.

2  Keeping the shutter button pressed halfway, recompose the photograph and then press the shutter button the rest of the way down.
   • Do not change the distance between the camera and the subject while pressing the shutter button halfway.

**Quick AF target selection**

You can save the selected AF target for quick recall using the Fn1/Fn2 or ° buttons.
• Select the AF target using [Set Home] (P. 86).
• Assign [Home] to the button using the [Button Function] option (P. 86).

**Toggling quickly between AF and MF**

The Fn1/Fn2 or ° button can be used to toggle [MF].
• Assign the [MF] function to the button using the [Button Function] option (P. 86).
**Zoom frame AF/zoom AF**

You can also zoom in on an area of the image in the monitor and adjust focus. Choosing a high zoom ratio allows you to use autofocus to focus on a smaller area than is normally covered by the AF target. You can also position the focus target more precisely.

1. Before proceeding, use [Button Function] (P. 86) to assign [Q] to a button.

2. Press the Q button to display the zoom frame.
   - If the camera was focused using autofocus just before the button was pressed, the zoom frame will be displayed at the current focus position.
   - Use △ ▽ 〈 〉 to position the zoom frame.
   - Press the INFO button and use △ ▽ to choose the zoom ratio.

3. Press the Q button again to zoom in on the zoom frame.
   - Use △ ▽ 〈 〉 to position the zoom frame.
   - Rotate the dial to choose the zoom ratio.

4. Press the shutter button halfway to initiate autofocus.
   - The zoom is cancelled.
   - If [mode2] is selected for [LV Close Up Mode] (P. 88), pressing the shutter button will not cancel zoom and the camera will focus continuously while the shutter button is pressed halfway.

⚠️ **Cautions**
- Zoom is visible only in the monitor and has no effect on the resulting photographs.
**Face priority AF/pupil detection AF**

The camera detects faces and adjusts focus and digital ESP.

**Taking pictures using face priority**

1. Display the super control panel or live control and select the face priority item.
2. Use the sub dial to choose a setting.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>OFF</strong> Face Priority Off</td>
<td>Face priority off.</td>
</tr>
<tr>
<td><strong>Face Priority On</strong></td>
<td>Face priority on.</td>
</tr>
<tr>
<td><strong>Face &amp; Eye Priority On</strong></td>
<td>The autofocus system selects the pupil of the eye closest to the camera for face-priority AF.</td>
</tr>
<tr>
<td><strong>Face &amp; R. Eye Priority On</strong></td>
<td>The autofocus system selects the pupil of the eye on the right for face-priority AF.</td>
</tr>
<tr>
<td><strong>Face &amp; L. Eye Priority On</strong></td>
<td>The autofocus system selects the pupil of the eye on the left for face-priority AF.</td>
</tr>
</tbody>
</table>

3. Point the camera at your subject.
   - If a face is detected, it will be indicated by a white border.

4. Press the shutter button halfway to focus.
   - When the camera focuses on the face in the white border, the border will turn green.
   - If the camera is able to detect the subject’s eyes, it will display a green frame over the selected eye. (pupil detection AF)

5. Press the shutter button the rest of the way down to shoot.

⚠️ **Cautions**
- Face priority applies only to the first shot in each sequence taken during sequential shooting.
- Depending on the subject, the camera may not be able to correctly detect the face.
- In metering modes other than [Digital ESP metering], the camera will meter exposure for the selected position.

✅ **Notes**
- Face priority is also available in [MF]. Faces detected by the camera are indicated by white frames.
Controlling exposure (exposure compensation)

Rotate the sub dial to choose exposure compensation. Choose positive (“+”) values to make pictures brighter, negative (“−”) values to make pictures darker. Exposure can be adjusted by ±3 EV.

![Negative (−) - No compensation (0) - Positive (+)]

**Tips**

To change the exposure adjustment interval. [EV Step] (P. 88)/ Changing the direction of the dial. [Dial Direction] (P. 87)/

If [Button Function] (P. 86) is used to assign [F] (exposure compensation) to a button, exposure compensation can be adjusted after [F] is pressed.

**Cautions**

- Exposure compensation is not available in [AUTO], [M], or [SCN] modes.

Changing the brightness of highlights and shadows

Before shooting begins, use [Button Function] (P. 86) to assign [F] (exposure compensation) to a button. Press [F] and then the INFO button to display exposure compensation options. Use < or > to adjust exposure compensation. Adjust exposure downward to make shadows darker, upward to make highlights brighter.
Choosing how the camera measures brightness (metering)

Choose how the camera meters subject brightness.

1. Display the super control panel or live control and select the metering item.

2. Use the sub dial to choose a setting.

<table>
<thead>
<tr>
<th>Digital ESP metering</th>
<th>The camera meters exposure in 324 areas of the frame and optimizes exposure for the current scene or (if an option other than [OFF] is selected for [Face Priority]) portrait subject. This mode is recommended for general use.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Center weighted averaging metering</td>
<td>This metering mode provides the average metering between the subject and the background lighting, placing more weight on the subject at the center.</td>
</tr>
<tr>
<td>Spot metering</td>
<td>Choose this option to meter a small area (about 2% of the frame) with the camera pointed at the object you wish to meter. Exposure will be adjusted according to the brightness at the metered point.</td>
</tr>
<tr>
<td>Spot metering - highlight control</td>
<td>Increases spot metering exposure. Ensures bright subjects appear bright.</td>
</tr>
</tbody>
</table>

3. Press the shutter button halfway.
   - Normally, the camera will start metering when the shutter button is pressed halfway and lock exposure while the shutter button is held in this position.

Exposure lock (AE lock)

Press Fn1 to lock only exposure. Exposure lock can be used when you want to set focus and exposure separately while recomposing photographs, or if you want to take a series of photographs at the same exposure.

- [Button Function] can be used to assign exposure and focus lock to other buttons.

Exposure locks and an AE icon is displayed when the button is pressed once. Press the shutter button to take a picture.
- Press the button again to cancel AE lock.

Tips
To activate AE lock with a set metering mode. [AEL Metering] (P. 88)
Reducing camera shake (the image stabilizer)

You can reduce the amount of camera shake that can occur when shooting in low light situations or shooting with high magnification.

1 Display the super control panel or live control and select the image stabilizer item.

2 Use the sub dial to choose a setting.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IS Off</td>
<td>Image stabilizer is off.</td>
</tr>
<tr>
<td>Auto</td>
<td>Image stabilizer is on.</td>
</tr>
<tr>
<td>Vertical IS</td>
<td>Image stabilization applies only to vertical (_vertical) camera shake. Use when panning the camera horizontally.</td>
</tr>
<tr>
<td>Horizontal IS</td>
<td>Image stabilization applies only to horizontal (horizontal) camera shake. Use when panning the camera horizontally with the camera held in portrait orientation.</td>
</tr>
</tbody>
</table>

Choosing a focal length (Micro Four Thirds/Four Thirds System lenses excluded)

Use focal length information to reduce camera shake when shooting with lenses that are not Micro Four Thirds or Four Thirds system lenses.

1 Select the image stabilizer item in the super control panel or live control and press the INFO button.

2 Use \( \leftarrow\rightarrow \) to choose a focal length and press OK.

- Choose a focal length between 8 mm and 1000 mm.
- Choose the value that most closely matches to the one that is printed on the lens.

Cautions

- The image stabilizer cannot correct excessive camera shake or camera shake that occurs when the shutter speed is set to the slowest speed. In these cases, it is recommended that you use a tripod.
- When using a tripod, set [Image Stabilizer] to [OFF].
- When using a lens with an image stabilization function, turn off the image stabilizer function of either the lens or the camera.
- You may notice an operating sound or vibration when the image stabilizer is activated.

Tips

Pressing the shutter button halfway activates image stabilization. \( \text{[Half Way Rls With IS]} \) (P. 87)
Basic photography/frequently-used options

Adjusting color (white balance)

White balance (WB) ensures that white objects in images recorded by the camera appear white. [AUTO] is suitable in most circumstances, but other values can be selected according to the light source when [AUTO] fails to produce the desired results or you wish to introduce a deliberate color cast into your images.

1 Display the super control panel or live control and select the white balance item.

2 Use the sub dial to choose a setting.

<table>
<thead>
<tr>
<th>WB mode</th>
<th>Color temperature</th>
<th>Light conditions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto white balance WB AUTO</td>
<td>—</td>
<td>Use this mode for general use.</td>
</tr>
<tr>

</tr>
<tr>
<td>Custom white balance CWB</td>
<td>2000K – 14000K</td>
<td>After pressing the INFO button, use buttons to select a color temperature and then press .</td>
</tr>
</tbody>
</table>

White balance compensation

This function lets you make fine changes to the auto WB and preset WB settings.

1 Select [WB] in Custom Menu (P. 86) tab .

2 Select the option to be modified and press .

3 Select a slider with and use to choose the amount.
Adjusting the white balance in the A direction  
(Amber-Blue)
Higher values produce “warmer” (redder) tints, lower values “cooler” (bluer) tints.

Adjusting the white balance in the G direction  
(Green-Magenta)
Higher values produce greener tints, lower values tints that are more purple.

4 Press ✅ to save settings and exit.

Tips
• To display a test photograph taken at the selected white balance value, press the ✅ button.
• Adjusting all WB mode settings at once. [All WB ] (P. 89)

One-touch white balance
Measure white balance by framing a piece of paper or other white object under the lighting that will be used in the final photograph. This is useful when shooting a subject under natural light, as well as under various light sources with different color temperatures.

1 Select [ ] or [ ] (one-touch white balance 1 or 2) and press the INFO button.

2 Photograph a piece of colorless (white or gray) paper.
  • Frame the object so that it fills the display and no shadows fall it.
  • The one-touch white balance screen appears.

3 Select [Yes] and press ✅.
  • The new value is saved as a preset white balance option.
  • The new value is stored until one-touch white balance is measured again. Turning the power off does not erase the data.

Tips
If the subject is too bright or too dark or visibly tinted, the message “WB NG Retry” will be displayed and no value will be recorded. Correct the problem and repeat the process from Step 1.
Processing options (picture mode)

Select a picture mode and make individual adjustments to contrast, sharpness, and other parameters. Changes to each picture mode are stored separately.

1  Select [Picture Mode] in shooting menu (P. 111).
2  Select an option with \( \Delta \) \( \nabla \) and press \( \text{OK} \).

</table>

⚠️ Cautions

- Changes to contrast have no effect at settings other than [Normal].

Image quality (record mode)

Select an image quality for photographs and movies according their intended use, for example retouching on a computer or display on the web.

Choosing a record mode

1. Display the live control and highlight the current record mode option for photographs or movies.
   - Photo image quality can also be adjusted from the super control panel.

2. Use the sub dial to choose a setting.

Record modes (still images)

Choose from RAW and JPEG (L, LN, MN, and SN) modes. Choose a RAW+JPEG option to record both a RAW and a JPEG image with each shot. JPEG modes combine image size (L, M, and S) and compression ratio (SF, F, N, and B). The options available can be selected using the [Set] (P. 90) option in the custom menus.

<table>
<thead>
<tr>
<th>Image size</th>

</tr>
<tr>
<td></td>
<td>640×480</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

* Default.

- The size of [M] and [S] images can be selected using the [Pixel Count] (P. 90) option in the custom menus.

RAW image data

This format (extension “.ORF”) stores unprocessed image data for later processing. RAW image data cannot be viewed using other cameras or software, and RAW images cannot be selected for printing. JPEG copies of RAW images can be created using this camera.

“Editing still images” (P. 72)
### Record modes (movies)

<table>
<thead>
<tr>
<th>Record mode</th>
<th>Pixel count</th>
<th>Frame rate</th>
<th>File format</th>
<th>Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>Full HD Fine</td>
<td>1920×1080</td>
<td>59.94i²</td>
<td>MPEG-4 AVC/H.264¹</td>
<td>Display on TVs and other devices</td>
</tr>
<tr>
<td>Full HD Normal</td>
<td>1920×1080</td>
<td>59.94i²</td>
<td></td>
<td></td>
</tr>
<tr>
<td>HD Fine</td>
<td>1280×720</td>
<td>59.94p²</td>
<td></td>
<td></td>
</tr>
<tr>
<td>HD Normal</td>

<td></td>
</tr>
<tr>
<td>HD</td>
<td>1280×720</td>
<td></td>
<td>Motion JPEG⁴</td>
<td>For computer playback or editing.</td>
</tr>
<tr>
<td>SD</td>
<td>640×480</td>
<td>Approx. 30 fps³</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- Depending on the type of card used, recording may end before the maximum length is reached.
- *1 Individual movies can be up to 29 minutes long.
- *2 Image sensor output about 30 fps.
- *3 The frame rate may drop when an art filter is used.
- *4 Files may be up to 2GB in size.

### Setting the image aspect

You can change the aspect ratio (horizontal-to-vertical ratio) when taking pictures using live view. Depending on your preference, you can set the aspect ratio to [4:3] (standard), [16:9], [3:2], [1:1], or [3:4].

1. Display the super control panel or live control and select the aspect ratio item.
2. Use the sub dial to choose a setting.

**Cautions**
- JPEG images are cropped to the selected aspect ratio; RAW images, however, are not cropped but are instead saved with information on the selected aspect ratio.
- When RAW images are played back, the selected aspect ratio is shown by a frame.

**Tips**
For information on cropping existing photographs or changing their aspect ratio, see “Editing still images” (P. 72).

### ISO sensitivity

Increasing ISO sensitivity increases noise (graininess) but allows photographs to be taken when lighting is poor. The setting recommended in most situations is [AUTO], which starts at ISO 200 — a value that balances noise and dynamic range — and then adjusts ISO sensitivity according to shooting conditions.

1. Display the super control panel or live control and select the ISO sensitivity item.
2. Use the sub dial to choose a setting.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AUTO</td>
<td>The sensitivity is set automatically according to the shooting conditions.</td>
</tr>
<tr>
<td>LOW, 200–25600</td>
<td>Sensitivity is set to the selected value.</td>
</tr>
</tbody>
</table>
**Tips**

---

**Sequential shooting/using the self timer**

Keep the shutter button pressed all the way down to take a series of photos. Alternatively, you can take pictures using the self timer.

1. Display the super control panel or live control and select [ ].
2. Use the sub dial to choose a setting.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Single-frame shooting</td>
<td>Shoots 1 frame at a time when the shutter button is pressed (normal shooting mode).</td>
</tr>
<tr>
<td>Sequential H</td>
<td>Photographs are taken at about 9 frames per second (fps) while the shutter button is pressed all the way down. Focus, exposure, and white balance are fixed at the values for the first shot in each series.</td>
</tr>
<tr>
<td>Sequential L</td>
<td>Photographs are taken at about 4 frames per second (fps) while the shutter button is pressed all the way down. Focus and exposure are fixed according to the options selected for [AF Mode] (P. 86) and [AEL/AFL] (P. 86).</td>
</tr>
<tr>
<td>Self-timer 12 SEC</td>
<td>Press the shutter button halfway to focus, the rest of the way down to start the timer. First, the self-timer lamp lights up for approximately 10 seconds, then it blinks for approximately 2 seconds and the picture is taken.</td>
</tr>
<tr>
<td>Self-timer 2 SEC</td>
<td>Press the shutter button halfway to focus, the rest of the way down to start the timer. The self-timer lamp blinks for approximately 2 seconds, and then the picture is taken.</td>
</tr>
</tbody>
</table>

---

**Notes**
- To stop the timer before a picture is taken, press or or the **MENU** button.

**Cautions**
- The confirmation display is not available during sequential shooting at frame rates under 5 fps. At rates of 5 fps or above, the last photo taken will be displayed during shooting.
- During sequential shooting, if the battery check blinks due to low battery, the camera stops shooting and starts saving the pictures you have taken on the card. The camera may not save all of the pictures depending on how much battery power remains.
- Display quality may drop during sequential shooting. Filter effects are not reflected in the display.
- Fix the camera securely on a tripod for self-timer shooting.
- If you stand in front of the camera to press the shutter button halfway when using the self-timer, the photograph may be out of focus.
Other shooting options

“Point-and-shoot” photography (P program mode)

In mode P, the camera automatically adjusts shutter speed and aperture in response to subject brightness. Set the mode dial to P.

Framing pictures in the viewfinder

Framing pictures in the monitor

- The shutter speed and aperture selected by the camera are displayed.
- Rotate the main dial for program shift.
- Rotate the sub dial to choose exposure compensation.

⚠️ Cautions
- The shutter speed and aperture displays flash if the camera is unable to achieve optimal exposure. See “Exposure warning display” (P. 107).

Program shift (Ps)

In P and ART modes, you can adjust aperture and shutter speed without affecting exposure compensation. A “s” icon appears next to the shooting mode when program shift is in effect. To cancel program shift, rotate the dial until “s” is no longer displayed.

⚠️ Cautions
- Program shift is not available when you are using a flash.

🔗 Tips

Changing the role assigned to the dial. [Dial Function] (P. 87)

Choosing aperture (A aperture-priority mode)

In mode A, you choose the aperture and let the camera automatically adjust shutter speed for optimal exposure. After rotating the mode dial to A, rotate the main dial to choose the aperture.
• Rotate the sub dial to choose exposure compensation.
• Larger apertures (lower f-numbers) decrease depth of field (the area in front of or behind the focus point that appears to be in focus), softening background details. Smaller apertures (higher f-numbers) increase depth of field.

**Preview function**
You can preview depth of field (the area behind and in front of the subject that appears to be in focus). The camera stops aperture down to the selected value while the button to which [Preview] has been assigned is pressed. [Button Function] (P. 93)

**Tips**
Changing the role assigned to the dial. [Dial Function] (P. 87)

**Choosing shutter speed (S shutter-priority mode)**

In mode S, you choose the shutter speed and let the camera automatically adjust aperture for optimal exposure. After rotating the mode dial to S, rotate the main dial to choose the shutter speed.

• Rotate the sub dial to choose exposure compensation.
• A fast shutter speed can freeze a fast action scene without any blur. A slow shutter speed will blur a fast action scene. This blurring will give the impression of dynamic motion.

**Tips**
Changing the role assigned to the dial. [Dial Function] (P. 87)

**Choosing aperture and shutter speed (M manual mode)**

In mode M, you choose both the aperture and the shutter speed. At a speed of BULB, the shutter remains open while the shutter button is pressed. After rotating the mode dial to M, rotate the main dial to choose the aperture and the sub dial to choose the shutter speed.

• Shutter speed can be set to values between 1/4000 and 60 seconds or to [BULB] or [LIVE TIME].

**Cautions**
• Exposure compensation is not available in M mode.
Choosing when the exposure ends (bulb/time photography)

Use for night landscapes and fireworks. Shutter speeds of [BULB] and [LIVE TIME] are available in mode M.

**Bulb photography (BULB):** The shutter remains open while the shutter button is pressed. The exposure ends when the shutter button is released.

**Time photography (TIME):** The exposure begins when the shutter button is pressed all the way down. To end the exposure, press the shutter button all the way down again.

### Viewing Progress in the Monitor

To view the progress of the exposure during shooting, choose a display interval for [Live BULB] (P. 89) or [Live TIME] (P. 89). This makes it easier to choose when to end the exposure. If [Live TIME] is selected, the display can be refreshed by pressing the shutter button halfway during time photography.

#### Tips

Changing the role assigned to the dial. [Dial Function] (P. 87) / To automatically end bulb shooting after a specified period of time. [BULB/TIME Timer] (P. 89) / To fix the focus during manual focus shooting. [BULB/TIME Focusing] (P. 86)

#### Cautions

- ISO sensitivity can be set to values between ISO LOW, 200 and 1600 for live bulb and live time photography.
- To reduce camera blur during long exposures, mount the camera on a tripod and use a remote cable (P. 106).
- The following features are not available during long exposures:
  - Sequential shooting/self-timer shooting/AE bracket shooting/image stabilizer/
    flash bracketing/multiple exposure
  - * An option other than [Off] is selected for [Live BULB] or [Live TIME].

#### Noise in images

While shooting at slow shutter speeds, noise may appear on-screen. These phenomena are caused when current is generated in those sections of the image pickup device that are not normally exposed to light, resulting in a rise in temperature in the image pickup device or image pickup device drive circuit. This can also occur when shooting with a high ISO setting in a high-temperature environment. To reduce this noise, the camera activates the noise reduction function. [Noise Reduct.] (P. 89)
Taking Panoramas

If you have installed the supplied computer software, you can use it to join pictures together to form a panorama. Images are framed in the monitor. “Using OLYMPUS Viewer 2” (P. 78)

Taking pictures for a panorama

1 Rotate the mode dial to SCN.

2 Select [Panorama] and press 

3 Use △ ◄ ◄ to choose a pan direction.

4 Take a picture, using the guides to frame the shot.
   • Focus, exposure, and other settings are fixed at the values for the first shot.

5 Take the remaining images, framing each shot so that the guides overlap with the previous picture.
   • A panorama may include up to 10 images. A warning indicator ( ) is displayed after the tenth shot.

6 After taking the last shot, press 

Cautions
   • During panorama shooting, the image previously taken for position alignment will not be displayed. With the frames or other markers for display in the images as a guide, set the composition such that the edges of the overlapping images overlap within the frames.

Notes
   • Pressing 
before shooting the first frame returns to the scene mode selection menu. Pressing 
 in the midst of shooting ends the sequence of panorama shooting, and allows you to continue with the next one.
3D Photography

Take 3D photographs. The results can be viewed on devices that support 3D display. Images are framed in the monitor. The camera monitor can not be used to view images in 3D.

1 Rotate the mode dial to **SCN**.

2 Select [3D Photo] and press **OK**.
   • The subject is displayed in the monitor.

3 Press the shutter button to take the first shot and keep the shutter button in this position.
   • Focus and exposure are locked at the values for the first shot.
   • If you are using a 3D lens, shooting is completed the first time the shutter button is pressed.

4 Move the camera horizontally without rotation until the first shot is superimposed on your subject. The camera will take the second shot automatically.
   • Do not adjust focus or zoom.
   • If the camera does not take the second shot automatically or if you released the shutter button before the second shot was taken, press the shutter button all the way down again.

5 The two images are combined automatically.
   • If the camera displays the message [3D photo was not created.], take the photograph again. The two shots are saved to separate files.

⚠️ Cautions
   • The quality of the display in the monitor drops slightly.
   • Adjusting zoom after the first shot is taken cancels the first shot.
   • The camera focuses on the subject in the center focus point only.
   • Image size is fixed at 1920 × 1080.
   • Image size is fixed at 1824 × 1024 SF when a 3D lens is used.
   • Manual focus lenses can not be used.
   • Depending on the lens and camera settings, the 3D effect may not be visible.
   • The camera will not go to sleep during 3D photography.
   • RAW photography is not available.
   • Frame coverage is not 100%.

🔍 Notes
   • To retake the photograph after taking the first shot, press **△**. Press **OK** to save the first shot and exit without recording a 3D image.
Recording multiple exposures in a single image (multiple exposure)

Record multiple exposures in a single image, using the option currently selected for image quality.

1. Select [Multiple Exposure] in shooting menu \( \bullet \) (P. 111).

2. Adjust settings.

<table>
<thead>
<tr>
<th>Frame</th>
<th>(multiple exposure)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Auto Gain</td>
<td>When set to [On], the brightness of each frame is set to 1/2 and the images are overlaid. When set to [Off], the images are overlaid with the original brightness of each frame.</td>
</tr>
<tr>
<td>Overlay</td>
<td>When set to [On], a RAW image recorded on a card can be overlaid with multiple exposures and stored as a separate image. The number of pictures taken is one.</td>
</tr>
</tbody>
</table>

- \( \bullet \) is displayed in the monitor while multiple exposure is in effect.

3. Take pictures.

- \( \bullet \) is displayed in green when shooting starts.
- Press \( \bullet \) to delete the last shot.
- The previous shot is superimposed on the view through the lens as a guide to framing the next shot.

Tips

- To overlay 3 or more frames: Select RAW for \( \bullet \) (P. 54) and use the [Overlay] option to make repeated multiple exposures.
- For more information on overlaying RAW images: \( \bullet \) “Image overlay” (P. 73)

Cautions

- The camera will not go to sleep while multiple exposure is in effect.
- Photographs taken with other cameras can not be included in a multiple exposure.
- When [Overlay] is set to [On], the images displayed when a RAW image is selected are developed with the settings at the time of shooting.
- To set the shooting functions, cancel multiple exposure shooting first. Some functions cannot be set.
- Multiple exposure is cancelled automatically from the first picture in the following situations.
  - The camera is turned off
  - The \( \bullet \) button is pressed
  - The MENU button is pressed
  - The shooting mode is set to a mode other than P, A, S, M
  - The battery power runs out
  - Any cable is connected to the camera
- When a RAW image is selected using [Overlay], the JPEG image for the image recorded in JPEG+RAW is displayed.
- When shooting multiple exposures using bracketing, priority is given to multiple exposure shooting. While the overlay image is being saved, bracketing is reset to the factory default setting.
Varying settings over a series of photographs (bracketing)

“Bracketing” refers to the act of varying settings automatically over a series of shots or a series of images to “bracket” the current value.

2. Choose a bracketing type.
   • BKT is displayed in the monitor.

AE BKT (AE bracketing)
The camera varies exposure by 0.3 EV, 0.7 EV, or 1.0 EV over three shots. In single-frame shooting mode, one photograph is taken each time the shutter button is pressed all the way down, while in sequential shooting mode the camera continues to take shots in the following order while the shutter button is pressed all the way down: no modification, negative, positive. Number of shots: 2, 3, 5, or 7
   • The BKT indicator turns green during bracketing.
   • The camera modifies exposure by varying aperture and shutter speed (mode P), shutter speed (modes A and M), or aperture (mode S).
   • The camera brackets the value currently selected for exposure compensation.
   • The size of the bracketing increment changes with the value selected for [EV Step]. (P. 88)

WB BKT (WB bracketing)
Three images with different white balances (adjusted in specified color directions) are automatically created from one shot, starting with the value currently selected for white balance.
   • White balance can be varied by 2, 4, or 6 steps on each of the A–B (Amber–Blue) and G–M (Green–Magenta) axes.
   • The camera brackets the value currently selected for white balance compensation.
   • No pictures will be taken during WB bracketing if there is not enough memory on the card for the selected number of frames.

FL BKT (FL bracketing)
The camera varies flash level over three shots (no modification on the first shot, negative on the second, and positive on the third). In single-frame shooting, one shot is taken each time the shutter button is pressed; in sequential shooting, all shots are taken while the shutter button is pressed.
Other shooting options

- The **BKT** indicator turns green during bracketing.
- The size of the bracketing increment changes with the value selected for [EV Step]. (P. 88)

### ISO BKT (ISO bracketing)

The camera varies sensitivity by 0.3 EV, 0.7 EV, or 1.0 EV over three shots (no modification on the first shot, negative on the second, and positive on the third), bracketing the current sensitivity setting (or if auto sensitivity is selected, the optimal sensitivity setting) while keeping shutter speed and aperture fixed. In single-frame shooting, one shot is taken each time the shutter button is pressed; in sequential shooting, all shots are taken while the shutter button is pressed.

- The size of the bracketing increment does not change with the value selected for [ISO Step]. (P. 88)
- Bracketing is performed regardless of the upper limit set with [ISO-Auto Set]. (P. 88)

### ART BKT (ART bracketing)

Each time the shutter is released, the camera records multiple images, each with a different art filter setting. You can turn art filter bracketing on or off separately for each picture mode.

- Recording may take some time.
- ART BKT can not be combined with WB BKT or ISO BKT.

### Digital Zoom (Digital Tele-converter)

Digital Tele-converter is used to zoom in beyond the current zoom ratio. The camera saves the center crop. Zoom is increased by about 2×.

2. The view in the monitor will be enlarged by a factor of two.
   - The subject will be recorded as it appears in the monitor.

#### Cautions

- Digital zoom is not available with multiple exposures or when 3D, 2, 6, 4, or 5 is selected in SCN mode.
- When a RAW image is displayed, the area visible in the monitor is indicated by a frame.
The built-in flash can be set manually as required. The built-in flash can be used for flash photography in a variety of shooting conditions.

**Using a flash (flash photography)**

1. Attach the flash unit and raise the flash head.
   - “Attaching the flash unit” (P. 7)

2. Display the super control panel or live control and highlight the flash mode.

3. Use the sub dial to choose a setting.
   - The options available and the order in which they are displayed vary depending on the shooting mode. “Flash modes that can be set by shooting mode” (P. 108)

<table>
<thead>
<tr>
<th>AUTO</th>
<th>Auto flash</th>
<th>The flash fires automatically in low light or backlight conditions.</th>
</tr>
</thead>
<tbody>
<tr>
<td>🌅</td>
<td>Fill-in flash</td>
<td>The flash fires regardless of the light conditions.</td>
</tr>
<tr>
<td>🌅</td>
<td>Flash off</td>
<td>The flash does not fire.</td>
</tr>
<tr>
<td>🌅/ ogl</td>
<td>Red-eye reduction flash</td>
<td>This function allows you to reduce the red-eye phenomenon. In S and M mode, the flash always fires.</td>
</tr>
<tr>
<td>🌅 SLOW</td>
<td>Slow synchronization (1st curtain)</td>
<td>Slow shutter speeds are used to brighten dimly-lit backgrounds.</td>
</tr>
<tr>
<td>🌅 SLOW</td>
<td>Slow synchronization (1st curtain)/Red-eye reduction flash</td>
<td>Combines slow synchronization with red-eye reduction.</td>
</tr>
<tr>
<td>🌅 SLOW2/ 2nd Curtain</td>
<td>Slow synchronization (2nd curtain)</td>
<td>The flash fires just before the shutter closes to create trails of light behind moving light sources.</td>
</tr>
<tr>
<td>🌅 FULL, 🌅 1/4 etc.</td>
<td>Manual</td>
<td>For users who prefer manual operation. If you press the INFO button, you can use the dial to adjust the flash level.</td>
</tr>
</tbody>
</table>

4. Press the shutter button all the way.

**Cautions**

- In [ ogl (Red-eye reduction flash)], after the pre-flashes, it takes about 1 second before the shutter is released. Do not move the camera until shooting is complete.
- [ ogl (Red-eye reduction flash)] may not work effectively under some shooting conditions.
- When the flash fires, the shutter speed is set to 1/250 sec. or slower. When shooting a subject against a bright background with the fill-in flash, the background may be overexposed.
Adjusting flash output (Flash intensity control)

Flash output can be adjusted if you find that your subject appears overexposed, or is underexposed even though the exposure in the rest of the frame is just right.

1. Display the super control panel or live control and select the flash intensity control item.
2. Use the sub dial to choose a setting.

Tips

For information on flash bracketing: “FL BKT (FL bracketing)” (P. 63)

Cautions

- This does not work when the flash control mode on the electronic flash is set to MANUAL.
- If flash intensity is adjusted on the electronic flash, it will be combined with the camera’s flash intensity setting.
- When \[\text{ flash intensity value will be added to the exposure compensation value. (P. 89) \}

Using external flash units designated for use with this camera

Optional external flash units designated for use with this camera support a wide variety of options for flash photography, including automatic flash control, super FP, and wireless flash control (P. 97).

Other external flash units

Observe the following precautions when mounting an external flash unit not designated for use with this camera on the camera hot shoe:

- Using obsolete flash units that apply currents of more than about 24 V to the camera hot shoe X-contact will damage the camera.
- Connecting flash units with signal contacts that do not conform to Olympus specifications may damage the camera.
- Use only with the camera in shooting mode \[M\] at shutter speeds slower than \[1/180\] s and at ISO settings other than \[AUTO\].
- Flash control can only be performed by manually setting the flash to the ISO sensitivity and aperture values selected with the camera. Flash brightness can be adjusted by adjusting either ISO sensitivity or aperture.
- Use a flash with an angle of illumination suited to the lens. Angle of illumination is usually expressed using 35-mm format equivalent focal lengths.
4 Shooting and viewing movies

Use the button to record High Definition (HD) movies with sound. In movie mode, you can create movies that take advantage of the effects available in modes A and M.

Changing the settings for movie recording

Adding effects to a movie

1. After selecting mode, display the live control (P. 24) and use \( \triangle \) \( \triangledown \) to highlight the shooting mode.
2. Use \( \langle \rangle \) to choose a mode and press \( \text{OK} \).

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>P</td>
<td>Optimal aperture is set automatically according to the brightness of the subject.</td>
</tr>
<tr>
<td>A</td>
<td>Depiction of background is changed by setting the aperture. Use a dial to choose the aperture.</td>
</tr>
<tr>
<td>S</td>
<td>Shutter speed affects how the subject appears. Use a dial to select the shutter speed. Shutter speed can be set to values between 1/30 s and 1/4000 s.</td>
</tr>
<tr>
<td>M</td>
<td>You control both aperture and shutter speed. Use the sub dial to choose the aperture, the main dial to choose the shutter speed. Shutter speed can be set to values between 1/30 s and 1/4000 s. Sensitivity can be set manually to values between ISO 200 and 3200; auto ISO sensitivity control is not available.</td>
</tr>
<tr>
<td>ART1–ART11</td>
<td>Movie can be recorded with effects of art filter mode.</td>
</tr>
</tbody>
</table>

Cautions

- When recording a movie, you cannot change the settings for exposure compensation, aperture value, and shutter speed.
- If [Image Stabilizer] is activated while recording a movie, the recorded image is enlarged slightly. Even if [Vertical IS] or [Horizontal IS] is selected, the setting for [Auto] is applied.
- Stabilization is not possible when the camera shake is excessive.
- When using a lens with the image stabilizer function, turn off the image stabilizer function of either the lens or the camera.
- When the inside of the camera becomes hot, shooting is automatically stopped to protect the camera.
- With some art filters, [C-AF] operation is limited.
- Cards with an SD speed class of 6 or above are recommended for movie recording.
Movie sound options (recording sound with movies)

1 Display the live control (P. 24) and select the Movie item using △ ▽.
2 Switch ON/OFF using ◄ ► and press OK.

⚠️ Cautions
- When recording sound in a movie, the sound made by the lens and camera operating may be recorded. If desired, you can reduce these sounds by shooting with [AF Mode] set to [S-AF], or by limiting the amount of times you press the buttons.
- No sound is recorded in [ART7] (Diorama) mode.

Viewing movies

1 Display a movie in single-frame playback and press OK.
2 Select [Movie Play] using △ ▽ and press OK to begin playback.
   - The following operations can be performed during movie playback:

<table>
<thead>
<tr>
<th>Button</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>OK</td>
<td>Pause or resume playback.</td>
</tr>
<tr>
<td></td>
<td>- While playback is paused, press △ to display the first frame and press ▽ to display the last frame. Press ◄ ► to rewind or advance one frame. Press and hold the button to rewind or advance in succession.</td>
</tr>
<tr>
<td>◄ ►</td>
<td>Advance or rewind a movie.</td>
</tr>
<tr>
<td>△ ▽</td>
<td>Adjust volume.</td>
</tr>
</tbody>
</table>

⚠️ Cautions
- We recommend using the supplied PC computer software to play movies on a computer. Before launching the software for the first time, connect the camera to the computer.

💡 Tips
- Recording movies with the shutter button (“Recording movies with the shutter button” (P. 96) / Reducing wind noise. [Wind Noise Reduction] (P. 92)/ Choosing a recording level. [Recording Volume] (P. 92)
5 Playback options

Single-frame playback

Press the button to view pictures full frame. Press the shutter button halfway to return to shooting mode.

Index display/calendar display

Only items for which [On] is selected are displayed. [Info Settings] (P. 87)

Playback zoom (close-up playback)

Sub dial (Next ()/previous ()
Main dial (Zoom in ()/zoom out ()
(Movie) Select picture (selected pictures are marked with ; press again to deselect)
Fn1 View picture using zoom frame (P. 70)

<tbody>
<tr>
<td>Fn1 or INFO</td>
<td>Choose between zoom frame, zoom scroll, and zoom paging.</td>
</tr>
</tbody>
</table>

**Canceling all protections**

This function lets you cancel the protection of several images at one time.

1. Select [Reset Protect] in the (playback) menu (P. 111).
2. Select [Yes] and press OK.

**All-frame erase**

Erase all images on the memory card.

2. Select [All Erase] and press OK.
   - The [Format] option (P. 103) can be used to delete non-image data.
3. Select [Yes] and press OK.

**Rotate**

Choose whether to rotate photographs.

1. Play the photograph back and press OK.
2. Select [Rotate] and press OK.
3. Press △ to rotate the image counterclockwise, ▽ to rotate it clockwise; the image rotates each time the button is pressed.
   - Press OK to save settings and exit.
   - The rotated image is saved in its current orientation.
   - Movies, 3D photos, and protected images cannot be rotated.

**Tips**

If [On] is selected for (P. 111) in the (playback) menu, images will be displayed in the new orientation during playback.
**Slideshow**

This function displays images stored on the card one after another.

1. Press OK during playback and select the slideshow option.

2. Adjust settings.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Start</td>
<td>Start the slideshow. Images are displayed in order, starting with the current picture.</td>
</tr>
<tr>
<td>BGM</td>
<td>Set BGM (4 types) or turn BGM [Off].</td>
</tr>
<tr>
<td>Effect*</td>
<td>Choose the transition between frames.</td>
</tr>
<tr>
<td>Slide</td>
<td>Set type of slideshow to execute.</td>
</tr>
<tr>
<td>Slide Interval</td>
<td>Choose the length of time each slide is displayed from 2 to 10 seconds.</td>
</tr>
<tr>
<td>Movie Interval</td>
<td>Select [Full] to include full-length movie clips in the slideshow, [Short] to include only the opening portion of each clip.</td>
</tr>
</tbody>
</table>

* The only effect available for movies is [Fade].

3. Select [Start] and press OK.
   - The slideshow will start.
   - Press OK to stop the slideshow.

**Volume**

Press ▲▼ during the slideshow to adjust the overall volume of the camera speaker.
Press ◀▶ to adjust the balance between the background music and the sound recorded with photographs or movies.
Editing still images

Recorded images can be edited and saved as new images.

1 Display the image to be edited and press OK.
   • [RAW Data Edit] is displayed if the picture is a RAW image, [JPEG Edit] if it is a JPEG image. If the image was recorded in RAW+JPEG format, the copy that will be edited is determined by your choice of [Edit] option.

2 Select [RAW Data Edit] or [JPEG Edit] and press OK.

<table>
<thead>
<tr>
<th>RAW Data Edit</th>
<th>Create a JPEG copy of a RAW image. The JPEG copy is processed using the settings currently stored in the camera. Adjust camera settings before choosing this option.</th>
</tr>
</thead>
<tbody>
<tr>
<td>JPEG Edit</td>
<td>Choose from the following options: [Shadow Adj]: Brightens a dark backlit subject. [Redeye Fix]: Reduces the red-eye phenomenon during flash shooting. [P]: Use the main dial to choose the size of the crop and Δ γ  to position the crop. [Aspect]: Changes the aspect ratio of images from 4:3 (standard) to [3:2], [16:9], [1:1], or [3:4]. After changing the aspect ratio, use the arrow pad to specify the trimming position. [Black &amp; White]: Creates black and white images. [Sepia]: Creates sepia-toned images. [Saturation]: Sets the color depth. Adjust the color saturation checking the picture on the screen. [Q]: Converts the image file size to 1280 × 960, 640 × 480, or 320 × 240. Images with an aspect ratio other than 4:3 (standard) are converted to the closest image file size. [e-Portrait]: Makes skin look smooth and translucent. You may not be able to compensate depending on the image if face detection fails.</td>
</tr>
</tbody>
</table>

⚠️ Cautions

- Movies and 3D photos cannot be edited.
- Red-eye correction may not work depending on the image.
- Editing of a JPEG image is not possible in the following cases:
  When an image is recorded in RAW, when an image is processed on a PC, when there is not enough space in the card memory, when an image is recorded on another camera.
- When resizing ([Q]) an image, you cannot select a larger number of pixels than was originally recorded.
- [P] and [Aspect] can only be used to edit images with an aspect ratio of 4:3 (standard).
**Image overlay**

Up to 3 frames of RAW images taken with the camera can be overlaid and saved as a separate image. The image is saved with the record mode set at the time the image is saved. (If [RAW] is selected, the copy will be saved in [L N+RAW] format.)

1. With a RAW image displayed during playback, press OK and select [Image Overlay].
2. Select the number of images in the overlay and press OK.
3. Use △ ▽ ◄ ► to select the RAW images that will be used in the overlay and press OK to select.
   - When you have selected the number of images specified in Step 2, the overlay will be displayed.
4. Adjust gain.
   - Use ◄ ► to select an image and use △ ▽ to adjust gain.
   - Gain can be adjusted in the range 0.1 – 2.0. Check the results in the monitor.
5. Press OK. A confirmation dialog will be displayed; select [Yes] and press OK.

**Tips**

To overlay 4 or more frames, save the overlay image as a RAW file and use [Image Overlay] repeatedly.

**Audio recording**

Add an audio recording (up to 30 sec. long) to the current photograph.

1. Display the image to which you want to add an audio recording and press OK.
   - Audio recording is not available with protected images.
   - Audio recording is also available in the playback menu.
2. Select [ ] and press OK.
   - To exit without adding a recording, select [No].
3. Select [Start] and press OK to begin recording.
4. Press OK to end recording.
   - Images with audio recordings are indicated by a ♫ icon.
   - To delete a recording, select [Erase] in Step 2.
**Viewing camera images on TV**

Use the AV cable provided with the camera to playback recorded images on your TV. Connect the camera to an HD TV using an HDMI cable (available from third-party suppliers) to view high-quality images on a TV screen.

1. **Use the cable to connect the camera to the TV.**
   - Adjust settings on the TV before connecting the camera.
   - Choose the camera video mode before connecting the camera via an A/V cable. [Video Out] (P. 87)

2. **Choose the TV input channel.**
   - The camera monitor turns off when the cable is connected.
   - Press the button when connecting via an AV cable.

**Cautions**

- For details on changing the input source of the TV, refer to the TV’s instruction manual.
- Depending on the TV’s settings, the displayed images and information may become cropped.
- If the camera is connected using both an A/V and HDMI cable, it will assign priority to HDMI.
- If the camera is connected via an HDMI cable, you will be able to choose the digital video signal type. Choose a format that matches the input format selected with the TV. [HDMI] (P. 87)

<table>
<thead>
<tr>
<th>Format</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1080i</td>
<td>Priority is given to 1080i HDMI output.</td>
</tr>
<tr>
<td>720p</td>
<td>Priority is given to 720p HDMI output.</td>
</tr>
<tr>
<td>480p/576p</td>
<td>480p/576p HDMI output. 576p is used when [PAL] is selected for [Video Out] (P. 87).</td>
</tr>
</tbody>
</table>

- You cannot shoot pictures or movies when the HDMI cable is connected.
- Do not connect the camera to other HDMI output devices. Doing so may damage the camera.
- HDMI output is not performed while connected via USB to a computer or printer.
Using the TV remote control
The camera can be operated by a TV remote control when connected to a TV that supports HDMI control.

1 Select [HDMI] in Custom Menu (P. 87) tab.

2 Select [HDMI Control] and choose [On].

3 Operate the camera by using the TV remote control.
   • You can operate the camera by following the operation guide displayed on the TV.
   • During single-frame playback, you can display or hide the information display by pressing the “Red” button, and display or hide the index display by pressing the “Green” button.
   • Some televisions may not support all features.
Sending and receiving images

The optional OLYMPUS PENPAL can be used to upload pictures to, and receive pictures from, Bluetooth devices or other cameras connected to an OLYMPUS PENPAL. Visit the OLYMPUS website for more information on Bluetooth devices. Before sending or receiving images, select [On] for [Menu Display] > [Menu Display] to make the accessory port menu accessible.

## Sending images

Resize and upload JPEG images to another device. Before sending images, make sure that the receiving device is set to the mode for receiving data.

1. Display the picture you wish to send full frame and press OK.

2. Select [Send A Picture] and press OK.
   - Select [Search] and press OK in the next dialog. Bluetooth devices in range, or in [Address Book] will be displayed.

3. Select the destination and press OK.
   - The image will be uploaded to the receiving device.
   - If prompted to provide a PIN code, enter 0000 and press OK.

## Receiving images/adding a host

Connect to the transmitting device and download JPEG images.

1. Select [OLYMPUS PENPAL Share] in the tab of the accessory port menu (P. 95).

2. Select [Please Wait] and press OK.
   - Perform operations for sending images on the sending device.
   - Transmission will start and a [Receive Picture Request] dialog will be displayed.

3. Select [Accept] and press OK.
   - The image will be downloaded to the camera.
   - If prompted to provide a PIN code, enter 0000 and press OK.

**Tips**

To resize images to be transmitted or choose how long the camera searches for a destination. [OLYMPUS PENPAL Share] (P. 95)
Sending and receiving images

Editing the address book

The OLYMPUS PENPAL can store host information. You can assign names to hosts or delete host information.

1 Select [OLYMPUS PENPAL Share] in the A tab of the accessory port menu (P. 95).
   • Press ▸ and select [Address Book].

2 Select [Address List] and press OK.
   • The names of existing hosts are listed.

3 Select the host you wish to edit and press OK.

Deleting hosts
Select [Yes] and press OK.

Editing host information
Press OK to display host information. To change the host name, press OK again and edit the current name in the rename dialog.

Creating albums

Your favorite JPEG pictures can be resized and copied to an OLYMPUS PENPAL.

1 Display the picture you wish to copy full frame and press OK.

2 Select [SD ➔ PENPAL] and press OK.
   • To copy images from an OLYMPUS PENPAL to the memory card, select [PENPAL ➔ SD] and press OK.

Tips
Choosing the size at which images are copied. [Picture Copy Size] (P. 95)/
Copying all images from the memory card. [Copy All] (P. 95)/
Deleting or formatting albums. [Album Mem. Setup] (P. 95)/
Removing protection from all images in the album. [Reset Protect] (P. 95)/
Viewing album status (amount of memory remaining). [Album Mem. Usage] (P. 95)

Cautions
• The OLYMPUS PENPAL can be used only in the region in which it was purchased.
  Depending on the areas, the usage may infringe the wave regulations and may be subject to its penalty.
Using OLYMPUS Viewer 2

Windows

1 Insert the supplied CD in a CD-ROM drive.
   
   **Windows XP**
   • A “Setup” dialog will be displayed.
   
   **Windows Vista/Windows 7**
   • An Autorun dialog will be displayed. Click “OLYMPUS Setup” to display the “Setup” dialog.

   **Caution**
   • If the “Setup” dialog is not displayed, select “My Computer” (Windows XP) or “Computer” (Windows Vista/Windows 7) from the start menu. Double-click the CD-ROM (OLYMPUS Setup) icon to open the “OLYMPUS Setup” window and then double-click “LAUNCHER.EXE”.
   • If a “User Account Control” dialog is displayed, click “Yes” or “Continue”.

2 Follow the on-screen instructions on your computer.

   **Caution**
   • If nothing is displayed on the camera screen even after connecting the camera to the computer, the battery may be exhausted. Use a full-charged battery.

3 Register your Olympus product.
   • Click the “Registration” button and follow the on-screen instructions.

4 Install OLYMPUS Viewer 2.
   • Check the system requirements before beginning installation.
   • Click the “OLYMPUS Viewer 2” button and follow the on-screen instructions to install the software.
Using OLYMPUS Viewer 2

<table>
<thead>
<tr>
<th>Operating System</th>
<th>Windows XP (Service Pack 2 or later)/Windows Vista/ Windows 7</th>
</tr>
</thead>
<tbody>
<tr>

- Other languages can be selected from the language combo box. For information on using the software, see online help.

Copying pictures to a computer without OLYMPUS Viewer 2

Your camera supports the USB Mass Storage Class. You can transfer images to a computer by connecting the camera to the computer with the provided USB cable. The following operating systems are compatible with the USB connection:

Macintosh:  Mac OS X version 10.3 or later
1 Turn the camera off and connect it to the computer.
   • The location of the USB port varies with the computer. For details, refer to your computer’s manual.

2 Turn on the camera.
   • The selection screen for the USB connection is displayed.

4 The computer recognizes the camera as a new device.

⚠️ Cautions
   • If you are using Windows Photo Gallery for Windows Vista or Windows 7, choose [MTP] in Step 3.
   • Data transfer is not guaranteed in the following environments, even if your computer is equipped with a USB port.
     Computers with a USB port added by means of an extension card, etc.
     Computers without a factory-installed OS and home-built computers
   • Camera controls can not be used while the camera is connected to a computer.
   • If the dialog shown in Step 2 is not displayed when the camera is connected, select [Auto] for [USB Mode] (P. 88) in the camera custom menus.
Print reservation (DPOF*)

You can save digital “print orders” to the memory card listing the pictures to be printed and the number of copies of each print. You can then have the pictures printed at a print shop that supports DPOF or print the pictures yourself by connecting the camera directly to a DPOF printer. A memory card is required when creating a print order.

* DPOF (Digital Print Order Format) is a standard for recording the data that a printer or print service requires to automatically print pictures.

Creating a print order

1 Press \( \) during playback and select \([\square]\).  
2 Select \([\square]\) or \([\text{ALL}]\) and press \(\) .

**Individual pictures**  
Press \(<\text{\textgreater}>\) to select the frame that you want to set as print reservation, then press \(\Delta\  \nabla \) to set the number of prints.  
- To set print reservation for several pictures, repeat this step. Press \(\) when all the desired pictures have been selected.

**All pictures**

Select \([\text{ALL}]\) and press \(\) .

3 Select the date and time format and press \(\) .

<table>
<thead>
<tr>
<th>No</th>
<th>The pictures are printed without the date and time.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Date</td>
<td>The pictures are printed with the shooting date.</td>
</tr>
<tr>
<td>Time</td>
<td>The pictures are printed with the shooting time.</td>
</tr>
</tbody>
</table>

4 Select [Set] and press \(\) .

⚠️ **Cautions**  
- The camera can not be used to modify print orders created with other devices. Creating a new print order deletes any existing print orders created with other devices.  
- Print orders can not include 3D photos, RAW images, or movies.

Removing all or selected pictures from the print order

You can reset all print reservation data or just the data for selected pictures.

1 Press \(\) during playback and select \([\square]\).  
2 Select \([\square]\) and press \(\) .  
- To remove all pictures from the print order, select [Reset] and press \(\) .  
- To exit without removing all pictures, select [Keep] and press \(\) .
3 Press \( \leftarrow \rightarrow \) to select images you wish to remove from the print order.
   - Use \( \downarrow \) to set the number of prints to 0. Press \( \checkmark \) once you have removed all the desired pictures from the print order.

4 Select the date and time format and press \( \checkmark \).
   - This setting is applied to all frames with print reservation data.

5 Select [Set] and press \( \checkmark \).

**Direct printing (PictBridge)**

By connecting the camera to a PictBridge-compatible printer with the USB cable, you can print out recorded pictures directly.

1 Connect the camera to the computer using the supplied USB cable and turn the camera on.

   - Use a fully charged battery for printing.
   - When the camera is turned on, a dialog should be displayed in the monitor prompting you to choose a host. If it is not, select [Auto] for [USB Mode] (P. 88) in the camera custom menus.

2 Use \( \uparrow \downarrow \) to select [Print].
   - [One Moment] will be displayed, followed by a print-mode selection dialog.
   - If the screen is not displayed after a few minutes, disconnect the USB cable and start again from Step 1.

   Proceed to “Custom printing” (P. 83).

⚠️ **Cautions**
- 3D photos, RAW images, and movies can not be printed.
Easy printing

Use the camera to display the picture you wish to print before connecting the printer via the USB cable.

1 Use < or > to display the pictures you want to print on the camera.

2 Press ▶.
   • The picture selection screen appears when printing is completed. To print another picture, use < or > to select the image and press Q.
   • To exit, unplug the USB cable from the camera while the picture selection screen is displayed.

Custom printing

1 Follow the operation guide to set a print option.

Selecting the print mode
Select the type of printing (print mode). The available print modes are as shown below.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Print</td>
<td>Prints selected pictures.</td>
</tr>
<tr>
<td>All Print</td>
<td>Prints all the pictures stored in the card and makes one print for each picture.</td>
</tr>
<tr>
<td>Multi Print</td>
<td>Prints multiple copies of one image in separate frames on a single sheet.</td>
</tr>
<tr>
<td>All Index</td>
<td>Prints an index of all the pictures stored in the card.</td>
</tr>
<tr>
<td>Print Order</td>
<td>Prints according to the print reservation you made. If there is no picture with print reservation, this is not available.</td>
</tr>
</tbody>
</table>

Setting the print paper items
This setting varies with the type of printer. If only the printer’s STANDARD setting is available, you cannot change the setting.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Size</td>
<td>Sets the paper size that the printer supports.</td>
</tr>
<tr>
<td>Borderless</td>
<td>Selects whether the picture is printed on the entire page or inside a blank frame.</td>
</tr>
<tr>
<td>Pics/sheet</td>
<td>Selects the number of pictures per sheet. Displayed when you have selected [Multi Print].</td>
</tr>
</tbody>
</table>
Selecting pictures you want to print
Select pictures you want to print. The selected pictures can be printed later (single-frame reservation) or the picture you are displaying can be printed right away.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Print</strong>(OK)</td>
<td>Prints the currently displayed picture. If there is a picture that [Single Print] reservation has already been applied to, only that reserved picture will be printed.</td>
</tr>
<tr>
<td><strong>Single Print</strong></td>
<td>Applies print reservation to the currently displayed picture. If you want to apply reservation to other pictures after applying [Single Print], use &lt; &gt; to select them.</td>
</tr>
<tr>
<td><strong>More</strong>(u)</td>
<td>Sets the number of prints and other items for the currently displayed picture, and whether or not to print it. For operation, refer to “Setting printing data” in the next section.</td>
</tr>
</tbody>
</table>

Setting printing data
Select whether to print printing data such as the date and time or file name on the picture when printing. When the print mode is set to [All Print] and [Option Set] is selected, the following options appears.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>×</td>
<td>Sets the number of prints.</td>
</tr>
<tr>
<td>Date</td>
<td>Prints the date and time recorded on the picture.</td>
</tr>
<tr>
<td>File Name</td>
<td>Prints the file name recorded on the picture.</td>
</tr>
<tr>
<td>📷</td>
<td>Trims the picture for printing. Use the dial to choose the crop size and &lt; &gt; to position the crop.</td>
</tr>
</tbody>
</table>

2 Once you have set the pictures for printing and printing data, select [Print], then press (OK).
- To stop and cancel printing, press (OK). To resume printing, select [Continue].

Cancelling printing
To cancel printing, highlight [Cancel] and press (OK). Note that any changes to the print order will be lost; to cancel printing and return to the previous step, where you can make changes to the current print order, press MENU.
## Setup Menu

Use the Setup Menu to set the basic camera functions. For details on using the menu lists, see “Using the menus” (P. 26).

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>📅 (Date/time setting)</td>
<td>Set the camera clock.</td>
<td>9</td>
</tr>
<tr>
<td>🗿️ (Changing the display language)</td>
<td>You can change the language used for the on-screen display and error messages from English to another language.</td>
<td></td>
</tr>
<tr>
<td>📲 (Monitor brightness adjustment)</td>
<td>You can adjust the brightness and color temperature of the monitor. Color temperature adjustment will affect only the monitor display during playback. Use &lt;</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Press the INFO button to switch between [Natural] and [Vivid] monitor color display.</td>
<td></td>
</tr>
<tr>
<td>Rec View</td>
<td>Choose whether pictures are displayed immediately after shooting and for how long. This is useful for making a brief check of the picture you have just taken. Pressing the shutter button halfway while checking the picture lets you resume shooting immediately.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>[0.3sec]–[20sec]: Selects the number of seconds to display each picture.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>[Off]: The picture being recorded to the card is not displayed.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>[Auto]: Displays the image being recorded, and then switches to playback mode. This is useful for erasing a picture after checking it.</td>
<td></td>
</tr>
<tr>
<td>🎥/◉ Menu Display</td>
<td>Choose whether to display the custom menus or accessory port menu.</td>
<td>86</td>
</tr>
<tr>
<td>Firmware</td>
<td>Your product’s firmware version will be displayed. When you make inquiries about your camera or accessories or when you want to download software, you will need to state which version of each of the products you are using.</td>
<td></td>
</tr>
</tbody>
</table>
Camera settings can be customized using the custom and accessory menus. The Custom menu is used to fine-tune camera settings. The Accessory Port menu is used to adjust settings for accessory port devices.

### Before Using the Custom/Accessory Port Menus

The Custom and Accessory Port menus are only available when the appropriate option is selected for the [Menu Display] item in the setup menu.

**Custom Menu options**

<td>Choose the upper limit and default value used for ISO sensitivity when [Auto] is selected for [ISO]. [High Limit]: Choose the upper limit for auto ISO sensitivity selection. [Default]: Choose the default value for auto ISO sensitivity selection.</td>
</tr>
</tbody>
</table>
## Customizing camera settings

### Option | Description
--- | ---
ISO-Auto | Choose the shooting modes in which [Auto] ISO sensitivity is available. 
[P/A/S]: Auto ISO sensitivity selection is available in all modes except M. ISO sensitivity is fixed at ISO 200 in mode M. 
[All]: Auto ISO sensitivity selection is available in all modes.

BULB/TIME Timer | Choose the maximum exposure for bulb and time photography.

Live BULB | Choose the display interval during shooting. Some restrictions apply. The frequency drops at high ISO sensitivities. Choose [Off] to disable the display. Tap the monitor or press the shutter button halfway to refresh the display.

Live TIME | —

Anti-shock [1] | Choose the delay between the shutter button being pressed and the shutter being released. This diminishes camera shake caused by vibrations. This feature is useful in situations such as microscope photography and astrophotography. It is also useful for sequential shooting (P. 56) and self timer photography (P. 56).

---

### Custom

### Option | Description
--- | ---
 ¶ X-Sync. | Choose the shutter speed used when the flash fires.

¶ Slow Limit | Choose the slowest shutter speed available when a flash is used.

[±][±] | When set to [On], it will be added to the exposure compensation value and flash intensity control will be performed.

---

### Exp/ISO/Color/WB

### Option | Description
--- | ---
Noise Reduct. | This function reduces the noise that is generated during long exposures. 
[Auto]: Noise reduction is only performed at slow shutter speeds. 
[On]: Noise reduction is performed with every shot. 
[Off]: Noise reduction off. 
• Noise reduction requires about twice the time needed to record the image. 
• Noise reduction turns off automatically during sequential shooting. 
• This function may not work effectively with some shooting conditions or subjects.

Noise Filter | Choose the amount of noise reduction performed at high ISO sensitivities.

WB | Choose the white balance mode.

All [WB] | [All Set]: Use the same white balance compensation in all modes except [CWB]. 
[All Reset]: Set white balance compensation for all modes except [CWB] to 0.
### Customizing camera settings

#### Keep Warm Color
- **Option**: 
- **Description**: Select [Off] to eliminate “warm” colors from pictures taken under incandescent lighting.

#### +WB
- **Option**: 
- **Description**: Adjust white balance for use with a flash.

#### Color Space
- **Option**: 
- **Description**: You can select how colors are reproduced on the monitor or printer.

#### Shading Comp.
- **Option**: 
- **Description**: Choose [On] to correct peripheral illumination according to the type of lens. 
  - Compensation is not available for teleconverters or extension tubes.
  - Noise may be visible at the edges of photographs taken at high ISO sensitivities.

#### Set
- **Option**: 
- **Description**: The record mode for JPEG photographs can be selected from four combinations of image size and compression rate. The camera offers a choice of three sizes and four compression rates for each combination.

#### Modifying JPEG record modes

1. Use ‹ › to select a combination ([1] – [4]) and use △ ▽ to change.
2. Press OK.

#### Pixel Count
- **Option**: 
- **Description**: Choose the pixel count for [M]- and [S]-size images.

2. Select [Middle] or [Small] and press OK.
3. Choose a pixel count and press OK.

#### Quick Erase
- **Option**: 
- **Description**: If [On] is selected, pressing the button in the playback display will immediately delete the current image.

#### RAW+JPEG Erase
- **Option**: 
- **Description**: Choose the action performed when a photograph recorded at a setting of RAW+JPEG is erased in single-frame playback (P. 17).
  - [JPEG]: Only the JPEG copy is erased.
  - [RAW]: Only the RAW copy is erased.
  - [RAW+JPEG]: Both copies are erased.
  - Both the RAW and JPEG copies are deleted when selected images are deleted or when [All Erase] (P. 70) is selected.
### Customizing camera settings

<td></td>
</tr>
</tbody>
</table>
Recording movies with the shutter button

If movie recording is not assigned to any button (including the R button), the shutter button can be used to record movies.

1 Set the mode dial to  

2 Press the shutter button halfway down and focus on what you wish record.
   • When the subject is in focus, the AF confirmation mark lights up.

3 Press the shutter button all the way to begin recording.
   • ●REC lights up while both movie and sound are recorded simultaneously.

4 Press the shutter button all the way to end recording.

Taking a photograph when recording ends

Select [On] for [Movie+Still] to take a still picture when movie recording is finished. This feature is useful when you want to record a still picture as well as the movie.

1 Select [Movie+Still] (P. 92) in  Custom Menu tab  .

2 Select [On] and press .

Cautions
• This option is only available when the shutter button is used to record movies.
## Wireless remote control flash photography

External flash units that offer a remote control mode and are designated for use with this camera can be used for wireless flash photography. The camera can independently control a flash mounted on the camera and remote flash units in up to 3 groups. See the documentation provided with the external flash units for details.

1. Set the remote flash units to RC mode and place them as desired.
   - Turn each flash unit on, press the MODE button, and select RC mode.
   - Select a channel and group for each flash unit.

   - The super control panel switches to RC mode.
   - You can choose a super control panel display by repeatedly pressing the **INFO** button.
   - Select a flash mode (note that red-eye reduction is not available in RC mode).

3. Adjust the settings for each group in the super control panel.

   - Group
     - Select the flash control mode and adjust the flash intensity separately for each group. For MANUAL, select the flash intensity.

   - Flash intensity value
     - Choose the role performed by the camera flash.

   - Flash control mode
     - Normal flash/Super FP flash
       - Switch between normal flash and Super FP flash.

   - Flash intensity
     - Communication light level
       - Set the communication light level to [HI], [MID], or [LO].

   - Channel
     - Set the communication channel to the same channel used on the flash.

4. Attach the supplied flash unit and raise the flash head.
   - After confirming that the built-in and remote flash units have charged, take a test shot.

### Wireless flash control range

Position the wireless flash units with their remote sensors facing the camera. The following illustration shows the approximate ranges at which the flash units can be positioned. The actual control range varies with local conditions.

### Cautions

- We recommend using a single group of up to three remote flash units.
- Remote flash units can not be used for second curtain slow synchronization or anti-shock exposures longer than 4 seconds.
- If the subject is too close to the camera, the control flashes emitted by the camera flash may affect exposure (The effect can be moderated by reducing the output of the camera flash using a diffuser or other similar techniques).
Shooting tips and information

The camera does not turn on even when a battery is loaded

The battery is not fully charged
• Charge the battery with the charger.

The battery is temporarily unable to function because of the cold
• Battery performance drops at low temperatures. Remove the battery and warm it by putting it in your pocket for a while.

No picture is taken when the shutter button is pressed

The camera has turned off automatically
• The camera automatically enters sleep mode to reduce the drain on the battery if no operations are performed for a set period of time. [Sleep] (P. 88)
  If no operations are performed for a set time (4 hours) after the camera has entered sleep mode, the camera will turn off automatically.

The flash is charging
• On the monitor, the mark blinks when charging is in progress. Wait for the blinking to stop, then press the shutter button.

Unable to focus
• The camera can not focus on subjects that are too close to the camera or that are not suited to autofocus (the AF confirmation mark will blink in the monitor). Increase the distance to the subject or focus on a high contrast object at the same distance from the camera as your main subject, compose the shot, and shoot.

Subjects that are difficult to focus on
It may be difficult to focus with auto focus in the following situations.

AF confirmation mark is blinking. These subjects are not focused.

AF confirmation mark lights up but the subject is not focused.

Subject with low contrast
Excessively bright light in center of frame
Subject containing no vertical lines
Subjects at different distances
Fast-moving subject
Subject not inside AF area
Noise reduction is activated
• When shooting night scenes, shutter speeds are slower and noise tends to appear in images. The camera activates the noise-reduction process after shooting at slow shutter speeds. During which, shooting is not allowed. You can set [Noise Reduct.] (P. 89) to [Off].

The number of AF targets is reduced.
The number and size of AF targets varies with aspect ratio, group target settings, and the option selected for [Digital Tele-converter].

The date and time has not been set

The camera is used with the settings at the time of purchase
• The date and time of the camera is not set when purchased. Set the date and time before using the camera. “Setting the date/time” (P. 9)

The battery has been removed from the camera
• The date and time settings will be returned to the factory default settings if the camera is left without the battery for approximately 1 day. The settings will be cancelled more quickly if the battery was only loaded in the camera for a short time before being removed. Before taking important pictures, check that the date and time settings are correct.

Set functions are restored to their factory default settings
When you rotate the mode dial or turn off the power in a shooting mode other than P, A, S, or M, functions with changes made to their settings are restored to the factory default settings.

Image taken appears whitish
This may occur when the picture is taken in backlight or semi-backlight conditions. This is due to a phenomenon called flare or ghosting. As far as possible, consider a composition where strong light source is not taken in the picture. Flare may occur even when a light source is not present in the picture. Use a lens hood to shade the lens from the light source. If a lens hood does not have effect, use your hand to shade the lens from the light. “Interchangeable lenses” (P. 104)

Unknown bright dot(s) appear on the subject in the picture taken
This may be due to stuck pixel(s) on the image pickup device. Perform [Pixel Mapping]. If the problem persists, repeat pixel mapping a few times. “Pixel mapping - Checking the image processing functions” (P. 102)

Functions that cannot be selected from menus
Some items may not be selectable from the menus when using the arrow pad.
• Items that cannot be set with the current shooting mode
• Items that cannot be set because of an item that has already been set: Combination of [ ] and [Noise Reduct.], etc.
## Error codes

Cleaning and storing the camera

Cleaning the camera

Turn off the camera and remove the battery before cleaning the camera.

Exterior:
• Wipe gently with a soft cloth. If the camera is very dirty, soak the cloth in mild soapy water and wring well. Wipe the camera with the damp cloth and then dry it with a dry cloth. If you have used the camera at the beach, use a cloth soaked in clean water and well wrung.

Monitor and viewfinder:
• Wipe gently with a soft cloth.

Lens:
• Blow dust off the lens with a commercially available blower. For the lens, wipe gently with a lens cleaning paper.

Storage
• When not using the camera for a prolonged period, remove the battery and card. Store the camera in a cool, dry place that is well ventilated.
• Insert the battery periodically and test the camera's functions.
• Remove dust and other foreign matter from the body and rear caps before attaching them.
• Attach the body cap to the camera to prevent dust from getting inside when no lens is attached. Be sure to replace the front and rear lens caps before putting the lens away.
• Clean the camera after use.
• Do not store with insect repellent.

Cleaning and checking the image pickup device

This camera incorporates a dust reduction function to keep dust from getting on the image pickup device and to remove any dust or dirt from the image pickup device surface with ultrasonic vibrations. The dust reduction function operates when the camera is turned on.

The dust reduction function operates at the same time as the pixel mapping, which checks the image pickup device and image processing circuitry. Since dust reduction is activated every time the camera's power is turned on, the camera should be held upright for the dust reduction function to be effective.

Cautions
• Do not use strong solvents such as benzene or alcohol, or a chemically treated cloth.
• Avoid storing the camera in places where chemicals are treated, in order to protect the camera from corrosion.
• Mold may form on the lens surface if the lens is left dirty.
• Check each part of the camera before use if it has not been used for a long time. Before taking important pictures, be sure to take a test shot and check that the camera works properly.

Pixel mapping - Checking the image processing functions

The pixel mapping feature allows the camera to check and adjust the image pickup device and image processing functions. After using the monitor or taking continuous shots, wait for at least one minute before using the pixel mapping function to ensure that it operates correctly.
1 Select [Pixel Mapping] (P. 92) in Custom Menu tab.

2 Press , then press .
   • The [Busy] bar is displayed when pixel mapping is in progress. When pixel mapping is finished, the menu is restored.

⚠️ Cautions
   • If you accidentally turn the camera off during pixel mapping, start again from Step 1.

---

## Card basics

### Usable cards

In this manual, all storage devices are referred to as “cards.” The following types of SD memory card (commercially available) can be used with this camera: SD, SDHC, SDXC, and Eye-Fi. For the latest information, please visit the Olympus website.

![SD card](image)

### SD card write protect switch

The SD card body has a write protect switch. If you set the switch to the “LOCK” side, you will not be able to write to the card, delete data or format. Return the switch to the unlock position to enable writing.

⚠️ Cautions
   • The data in the card will not be erased completely even after formatting the card or deleting the data. When discarding, destroy the card to prevent leakage of personal information.
   • Use the Eye-Fi card in compliance with the laws and regulations of the country where the camera is used.
   • In locations such as on an airplane, where the Eye-Fi communication is prohibited, remove the Eye-Fi card from the camera, or set [Eye-Fi] (P. 93) to [Off].
   • The Eye-Fi card may become hot during use.
   • When using an Eye-Fi card, the battery may run out faster.
   • When using an Eye-Fi card, the camera may function more slowly.

### Formatting the card

Cards formatted on a computer or other camera must be formatted with the camera before they can be used.

All data stored on the card, including protected images, is erased when the card is formatted. When formatting a used card, confirm there are no images that you still want to keep on the card.

1 Select [Card Setup] in shooting menu (P. 111).

2 Select [Format].

3 Select [Yes] and press .
   • Formatting is performed.
Battery and charger

- Use the single Olympus lithium-ion battery. Use only genuine OLYMPUS rechargeable batteries.
- The camera’s power consumption varies widely with usage and other conditions.
- As the following consume a lot of power even without shooting, the battery will be drained quickly.
  - Performing auto focus repeatedly by pressing the shutter button halfway in shooting mode.
  - Displaying images on the monitor for a prolonged period.
  - When connected to a computer or printer.
- When using a drained battery, the camera may turn off without the low battery warning being displayed.
- The battery will not be fully charged at the time of purchase. Charge the battery using the provided charger before use.
- The normal charging time using the provided charger is approximately 4 hours (estimated).
- Do not attempt to use chargers not specifically designated for use with the supplied battery, or to use batteries not specifically designated for use with the supplied charger.

Cautions

- There is a risk of explosion if the battery is replaced with the incorrect battery type. Dispose of the used battery following the instructions. “Battery Handling Precautions” (P. 119)

Using an optional AC adapter

The camera can be connected to an optional AC-3 AC adapter via a power battery holder (HLD-6). Other adapters cannot be used. The power cable supplied with the AC adapter cannot be used with other products.

Using your charger abroad

- The charger can be used in most home electrical sources within the range of 100 V to 240 V AC (50/60 Hz) around the world. However, depending on the country or area you are in, the AC wall outlet may be shaped differently and the charger may require a plug adapter to match the wall outlet. For details, ask at your local electrical shop or travel agent.
- Do not use commercially available travel adapters as the charger may malfunction.

Interchangeable lenses

Choose a lens according to the scene and your creative intent. Use lenses designed exclusively for the Micro Four Thirds system and bearing the M. ZUIKO label or the symbol shown at right. With an adapter, you can also use Four Thirds System and OM System lenses.

Cautions

- When you attach or remove the body cap and lens from the camera, keep the lens mount on the camera pointed downward. This helps prevent dust and other foreign matter from getting inside the camera.
- Do not remove the body cap or attach the lens in dusty places.
• Do not point the lens attached to the camera toward the sun. This may cause the camera to malfunction or even ignite due to the magnifying effect of sunlight focusing through the lens.
• Be careful not to lose the body cap and rear cap.

**M.ZUIKO DIGITAL lens specifications**

### Names of parts
1. Filter mount thread
2. Zoom ring (zoom lenses only)
3. Focus ring
4. Mount index
5. Electrical contacts
6. Front cap
7. Rear cap

If the hood is attached to a lens with a decorative ring, rotate the ring to the left.

### MF (manual focus) control
(17mm f1.8, ED12mm f2.0 (Snapshot focus), ED12-40mm f2.8PRO)

Slide the focus ring in the direction of the arrow to change the focus method.

With snapshot focus, a distance is set using the focus ring based on the shooting distance. The camera focuses over a depth of field corresponding to the set aperture value.
• We recommend setting the aperture to F5.6 or above with a 17mm f1.8 or an ED12mm f2.0.
• You can shoot at the selected distance irrespective of the AF mode on the camera.
• Use the distance scale only as a guide.

### Cautions
- Edges of pictures may be cut off if more than one filter is used or if a thick filter is used.

## Principal Accessories

### Mount adapter
Mount adapter allows the camera to be used with lenses that do not conform to the Micro Four Thirds System standard.

### Four Thirds lens adapter (MMF–3)
The camera requires MMF-3 Four Thirds lens adapter to attach Four Thirds lenses. Some features, such as autofocus, may not be available.

### OM adapter (MF–2)
Use with existing OLYMPUS OM System lenses. Focus and aperture must be adjusted manually. Image stabilization can be used. Input the focal length of the lens being used in the camera image stabilization settings.

### Remote cable (RM–UC1)
Use to reduce camera movement caused by the shutter button during macro or bulb photography. The remote cable attaches via the camera USB connector.
Converter lenses

Converter lenses attach to the camera lens for quick and easy fish-eye or macro photography. See the OLYMPUS website for information on the lenses that can be used.

- Use the appropriate lens attachment for **SCN** mode (fish-eye, wide, or macro).

Macro arm light (MAL–1)

Use to illuminate subjects for macro photography, even at ranges at which vignetting would occur with the flash.

Microphone set (SEMA–1)

The microphone can be placed at a distance from the camera to avoid recording ambient sounds or wind noise. Third-party commercial microphones can also be used depending on your creative intent. We recommend that you use the supplied extension cord. (power supplied via ø3.5 mm stereo mini-plug)

Power Battery Holder (HLD-6 (HLD-6G/HLD-6P))

The power battery holder includes grip and power components. The power component supplements the camera battery. It is equipped with a shutter button, a dial, and function buttons for use when the camera is rotated to take pictures in portrait orientation. It can also be used with a dedicated AC adapter (AC-3).

Exposure warning display

If the optimum exposure cannot be obtained when pressing the shutter button halfway, the display will blink on the monitor.

</tbody>
</table>

* When the flash is set to the Super FP mode, it detects backlight and fires with a longer duration than for normal flash before emitting light.

- AUTO, can be set in AUTO mode.

### Minimum range (FL-LM2)

The lens may cast shadows over objects close to the camera, causing vignetting, or be too bright even at minimum output.

<table>
<thead>
<tr>
<th>Lens</th>
<th>Approximate distance at which vignetting occurs</th>
</tr>
</thead>
<tbody>
<tr>
<td>14–42mm</td>
<td>0.2m</td>
</tr>
<tr>
<td>17 mm</td>
<td>0.2m</td>
</tr>
<tr>
<td>40–150mm</td>
<td>0.65m</td>
</tr>
<tr>
<td>12–40mm</td>
<td>1.6 m (12mm) 0.34 m (more than 17 mm)</td>
</tr>
</tbody>
</table>

- Use optional off-camera flash units to prevent vignetting. To prevent photographs from being overexposed, select mode A or M and choose a high f-number, or reduce ISO sensitivity.
Flash synchronization and shutter speed

<table>
<thead>
<tr>
<th>Shooting mode</th>
<th>Flash timing</th>
<th>Upper limit of synchronization timing*1</th>
<th>Fixed timing when flash fires*2</th>
</tr>
</thead>
<tbody>
<tr>

<td></td>
<td></td>
</tr>
</tbody>
</table>

*1 Can be changed using menu: 1/60 – 1/250 [Ⅺ X-Sync.] (P. 89)
*2 Can be changed using menu: 30 – 1/250 [Ⅺ Slow Limit] (P. 89)

External flash shooting

With this camera, you can use one of the separately sold external flash units to achieve a flash suited to your needs. The external flashes communicate with the camera, allowing you to control the camera’s flash modes with various available flash control modes, such as TTL-AUTO and Super FP flash.

An external flash unit specified for use with this camera can be mounted on the camera by attaching it to the camera’s hot shoe. You can also attach the flash to the flash bracket on the camera using the bracket cable (optional). Refer to the documentation provided with the external flash units as well.

Functions available with external flash units

</table>

*1 Assumes a 1GB SD card.

**Cautions**

- The number of remaining pictures may change according to the subject, whether or not print reservations have been made, and other factors. In certain instances, the number of remaining pictures displayed on the monitor will not change even when you take pictures or erase stored images.
- The actual file size varies according to the subject.
- The maximum number of storable still pictures displayed on the monitor is 9999.
- For the available recording time for movies, see the Olympus website.

SAFETY PRECAUTIONS

CAUTION

RISK OF ELECTRIC SHOCK
DO NOT OPEN

CAUTION: TO REDUCE THE RISK OF ELECTRICAL SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED OLYMPUS SERVICE PERSONNEL.

An exclamation mark enclosed in a triangle alerts you to important operating and maintenance instructions in the documentation provided with the product.

DANGER
If the product is used without observing the information given under this symbol, serious injury or death may result.

WARNING
If the product is used without observing the information given under this symbol, injury or death may result.

CAUTION
If the product is used without observing the information given under this symbol, minor personal injury, damage to the equipment, or loss of valuable data may result.

WARNING!
TO AVOID THE RISK OF FIRE OR ELECTRICAL SHOCK, NEVER DISASSEMBLE, EXPOSE THIS PRODUCT TO WATER OR OPERATE IN A HIGH HUMIDITY ENVIRONMENT.

General Precautions

Read All Instructions — Before you use the product, read all operating instructions. Save all manuals and documentation for future reference.

Cleaning — Always unplug this product from the wall outlet before cleaning. Use only a damp cloth for cleaning. Never use any type of liquid or aerosol cleaner, or any type of organic solvent to clean this product.

Attachments — For your safety, and to avoid damaging the product, use only accessories recommended by Olympus.

Water and Moisture — For precautions on products with weatherproof designs, read the weatherproofing sections.

Location — To avoid damage to the product, mount the product securely on a stable tripod, stand, or bracket.

Power Source — Connect this product only to the power source described on the product label.

Foreign Objects — To avoid personal injury, never insert a metal object into the product.

Heat — Never use or store this product near any heat source such as a radiator, heat register, stove, or any type of equipment or appliance that generates heat, including stereo amplifiers.

Product Handling Precautions

⚠️ WARNING

• Do not use the camera near flammable or explosive gases.

• Do not use the flash and LED on people (infants, small children, etc.) at close range.

You must be at least 1 m (3 ft.) away from the faces of your subjects. Firing the flash too close to the subject’s eyes could cause a momentary loss of vision.

• Keep young children and infants away from the camera.

Always use and store the camera out of the reach of young children and infants to prevent the following dangerous situations which could cause serious injury:

• Becoming entangled in the camera strap, causing strangulation.

• Accidentally swallowing the battery, cards or other small parts.
• Accidentally firing the flash into their own eyes or those of another child.
• Accidentally being injured by the moving parts of the camera.
• Do not look at the sun or strong lights with the camera.
• Do not use or store the camera in dusty or humid places.
• Do not cover the flash with a hand while firing.

⚠️ CAUTION

- Stop using the camera immediately if you notice any unusual odors, noise, or smoke around it.
  Never remove the batteries with bare hands, which may cause a fire or burn your hands.
- Never hold or operate the camera with wet hands.
- Do not leave the camera in places where it may be subject to extremely high temperatures.
  Doing so may cause parts to deteriorate and, in some circumstances, cause the camera to catch fire.
  Do not use the charger if it is covered (such as a blanket). This could cause overheating, resulting in fire.
- Handle the camera with care to avoid getting a low-temperature burn.
  When the camera contains metal parts, overheating can result in a low-temperature burn. Pay attention to the following:
  • When used for a long period, the camera will get hot. If you hold on to the camera in this state, a low temperature burn may be caused.
  • In places subject to extremely cold temperatures, the temperature of the camera’s body may be lower than the environmental temperature. If possible, wear gloves when handling the camera in cold temperatures.
- Be careful with the strap.
  Be careful with the strap when you carry the camera. It could easily catch on stray objects - and cause serious damage.

Battery Handling Precautions

Follow these important guidelines to prevent batteries from leaking, overheating, burning, exploding, or causing electrical shocks or burns.

⚠️ DANGER

- The camera uses a lithium ion battery specified by Olympus. Charge the battery with the specified charger. Do not use any other chargers.
- Never heat or incinerate batteries.
- Take precautions when carrying or storing batteries to prevent them from coming into contact with any metal objects such as jewelry, pins, fasteners, etc.
- Never store batteries where they will be exposed to direct sunlight, or subjected to high temperatures in a hot vehicle, near a heat source, etc.
- To prevent causing battery leaks or damaging their terminals, carefully follow all instructions regarding the use of batteries. Never attempt to disassemble a battery or modify it in any way, by soldering, etc.
- If battery fluid gets into your eyes, flush your eyes immediately with clear, cold running water and seek medical attention immediately.
- Always store batteries out of the reach of small children. If a child accidentally swallows a battery, seek medical attention immediately.
- Should you notice that the charger is emitting smoke, heat, or an unusual noise or smell, immediately cease use and unplug the charger from the power outlet, and then contact an authorized distributor or service center.

⚠️ WARNING

- Keep batteries dry at all times.
- To prevent batteries from leaking, overheating, or causing a fire or explosion, use only batteries recommended for use with this product.
- Insert the battery carefully as described in the operating instructions.
- If rechargeable batteries have not been recharged within the specified time, stop charging them and do not use them.
- Do not use a battery if it is cracked or broken.
- If a battery leaks, becomes discolored or deformed, or becomes abnormal in any other way during operation, stop using the camera.
- If a battery leaks fluid onto your clothing or skin, remove the clothing and flush the affected area with clean, running cold water immediately. If the fluid burns your skin, seek medical attention immediately.
- Never subject batteries to strong shocks or continuous vibration.

⚠️ CAUTION

- Before loading, always inspect the battery carefully for leaks, discoloration, warping, or any other abnormality.
- The battery may become hot during prolonged use. To avoid minor burns, do not remove it immediately after using the camera.
- Always unload the battery from the camera before storing the camera for a long period.
• This camera uses a lithium ion battery specified by Olympus. Do not use any other type of battery. For safe and proper use, read the battery’s instruction manual carefully before using it.
• If the battery’s terminals get wet or greasy, camera contact failure may result. Wipe the battery well with a dry cloth before use.
• Always charge a battery when using it for the first time, or if it has not been used for a long period.
• When operating the camera with battery power at low temperatures, try to keep the camera and spare battery as warm as possible. A battery that has run down at low temperatures may be restored after it is warmed at room temperature.
• The number of pictures you can take may vary depending on the shooting conditions or battery.
• Before going on a long trip, and especially before traveling abroad, purchase extra batteries. A recommended battery may be difficult to obtain while traveling.
• When the camera will not be used for an extended period, store it in a cool place.
• Please recycle batteries to help save our planet’s resources. When you throw away dead batteries, be sure to cover their terminals and always observe local laws and regulations.

Caution for Usage Environment

• To protect the high-precision technology contained in this product, never leave the camera in the places listed below, no matter if in use or storage:
  • Places where temperatures and/or humidity are high or go through extreme changes. Direct sunlight, beaches, locked cars, or near other heat sources (stove, radiator, etc.) or humidifiers.
  • In sandy or dusty environments.
  • Near flammable items or explosives.
  • In wet places, such as bathrooms or in the rain. When using products with weatherproof designs, read their manuals as well.
  • In places prone to strong vibrations.
  • Never drop the camera or subject it to severe shocks or vibrations.
  • When mounted on a tripod, adjust the position of the camera with the tripod head. Do not twist the camera.
  • Do not leave the camera pointed directly at the sun. This may cause lens or shutter curtain damage, color failure, ghosting on the image pickup device, or may possibly cause fires.
• Do not allow direct sunlight into the viewfinder. Failure to observe this precaution may result in image burn-in.
• Do not touch electric contacts on cameras and interchangeable lenses. Remember to attach the body cap when removing the lens.
• Before storing the camera for a long period, remove the battery. Select a cool, dry location for storage to prevent condensation or mold from forming inside the camera. After storage, test the camera by turning it on and pressing the shutter release button to make sure that it is operating normally.
• The camera may malfunction if it is used in a location where it is subject to a magnetic/ electromagnetic field, radio waves, or high voltage, such as near a TV set, microwave, video game, loud speakers, large monitor unit, TV/radio tower, or transmission towers. In such cases, turn the camera off and on again before further operation.
• Always observe the operating environment restrictions described in the camera’s manual.
• Do not directly touch or wipe the image pickup device of the camera.

Monitor

An organic electro-luminescent display is used on the rear of the camera.

• Prolonged display of a single image may burn the image into the display, resulting in decreased brightness or mottling in some areas of the monitor. In some cases this effect may be permanent. Image data are not affected.
• In the unlikely event of the monitor breaking, do not put the organic substance into your mouth. Any of the material adhering to your hands, feet, or clothing should be rinsed off immediately.
• A strip of light may appear on the top/bottom of the monitor, but this is not a malfunction.
• When a subject is viewed diagonally in the camera, the edges may appear zigzagged on the monitor. This is not a malfunction; it will be less noticeable in playback mode.
• In places subject to low temperatures, the monitor may take a long time to turn on or its color may change temporarily. When using the camera in extremely cold places, it is a good idea to occasionally place it in a warm place. An monitor exhibiting poor performance due to low temperatures will recover in normal temperatures.
• The monitor is made with high-precision technology. However, black spots or bright spots of light may appear constantly on the monitor.
Due to its characteristics or the angle at which you are viewing the monitor, the spot may not be uniform in color and brightness. This is not a malfunction.

**Lens**
- Do not immerse in water or splash with water.
- Do not drop or exert strong force on the lens.
- Do not hold at the moving part of the lens.
- Do not touch the lens surface directly.
- Do not touch the contact points directly.
- Do not subject to abrupt temperature changes.
- The operating temperature range is −10 °C - 40 °C (14 °F - 104 °F). Always use within this temperature range.

**Legal and Other Notices**
- Olympus makes no representations or warranties regarding any damages, or benefit expected by using this unit lawfully, or any request from a third person, which are caused by the inappropriate use of this product.
- Olympus makes no representations or warranties regarding any damages or any benefit expected by using this unit lawfully which are caused by erasing picture data.

**Disclaimer of Warranty**
- Olympus makes no representations or warranties, either expressed or implied, by or concerning any content of these written materials or software, and in no event shall be liable for any implied warranty of merchantability or fitness for any particular purpose or for any consequential, incidental or direct damages (including but not limited to damages for loss of business profits, business interruption and loss of business information) arising from the use or inability to use these written materials or software or equipment. Some countries do not allow the exclusion of liability for consequential or incidental damages, so the above limitations may not apply to you.
- Olympus reserves all rights to this manual.

**Warning**
Unauthorized photographing or use of copyrighted material may violate applicable copyright laws. Olympus assumes no responsibility for unauthorized photographing, use or other acts that infringe upon the rights of copyright owners.

**Copyright Notice**
All rights reserved. No part of these written materials or this software may be reproduced or used in any form or by any means, electronic or mechanical, including photocopying and recording or the use of any type of information storage and retrieval system, without the prior written permission of Olympus. No liability is assumed with respect to the use of the information contained in these written materials or software, or for damages resulting from the use of the information contained therein. Olympus reserves the right to alter the features and contents of this publication or software without obligation or advance notice.

**FCC Notice**
- **Radio and Television Interference**
Changes or modifications not expressly approved by the manufacturer may void the user's authority to operate this equipment. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
  - Adjust or relocate the receiving antenna.
  - Increase the distance between the camera and receiver.
  - Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
  - Consult your dealer or an experienced radio/TV technician for help. Only the OLYMPUS-supplied USB cable should be used to connect the camera to USB enabled personal computers (PC).

Any unauthorized changes or modifications to this equipment would void the user's authority to operate it.
Use Only Dedicated Rechargeable Battery and Battery Charger

We strongly recommend that you use only the genuine Olympus dedicated rechargeable battery and battery charger with this camera. Using a non-genuine rechargeable battery and/or battery charger may result in fire or personal injury due to leakage, heating, ignition or damage to the battery. Olympus does not assume any liability for accidents or damage that may result from the use of a battery and/or battery charger that are not genuine Olympus accessories.

This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference.
(2) This device must accept any interference received, including interference that may cause undesired operation.

For customers in Canada

This Class B digital apparatus complies with Canadian ICES-003.

OLYMPUS WORLDWIDE LIMITED WARRANTY
- IMAGING PRODUCTS

Olympus warrants that the enclosed Olympus® imaging product(s) and related Olympus® accessories (individually a “Product” and collectively the “Products”) will be free from defects in materials and workmanship under normal use and service for a period of one (1) year from the date of purchase.

If any Product proves to be defective within the one-year warranty period, the customer must return the defective Product to any of Olympus Service Centers, following the procedure set forth below (See “WHAT TO DO WHEN SERVICE IS NEEDED”).

Olympus, at its sole discretion, will repair, replace, or adjust the defective Product, provided that Olympus investigation and factory inspection disclose that (a) such defect developed under normal and proper use and (b) the Product is covered under this limited warranty.

Repair, replacement, or adjustment of defective Products shall be Olympus’s sole obligation and the customer’s sole remedy hereunder.

The customer is liable and shall pay for shipment of the Products to the Olympus Service Center. Olympus shall not be obligated to perform preventive maintenance, installation, deinstallation, or maintenance.

Olympus reserves the right to (i) use reconditioned, refurbished, and/or serviceable used parts (that meet Olympus’s quality assurance standards) for warranty or any other repairs and (ii) make any internal or external design and/or feature changes on or to its products without any liability to incorporate such changes on or to the Products.

WHAT IS NOT COVERED BY THIS LIMITED WARRANTY

Excluded from this limited warranty and not warranted by Olympus in any fashion, either express, implied, or by statute, are:

(a) products and accessories not manufactured by Olympus and/or not bearing the “OLYMPUS” brand label (the warranty coverage for products and accessories of other manufacturers, which may be distributed by Olympus, is the responsibility of the manufacturers of such products and accessories in accordance with the terms and duration of such manufacturers’ warranties);

(b) any Product which has been disassembled, repaired, tampered with, altered, changed, or modified by persons other than Olympus’s own authorized service personnel unless repair by others is made with the written consent of Olympus;
(c) defects or damage to the Products resulting from wear, tear, misuse, abuse, negligence, sand, liquids, impact, improper storage, nonperformance of scheduled operator and maintenance items, battery leakage, use of non-"OLYMPUS" brand accessories, consumables, or supplies, or use of the Products in combination with non-compatible devices;

(d) software programs;

(e) supplies and consumables (including but not limited to lamps, ink, paper, film, prints, negatives, cables and batteries); and/or

(f) Products which do not contain a validly placed and recorded Olympus serial number, unless they are a model on which Olympus does not place and record serial numbers.

EXCEPT FOR THE LIMITED WARRANTY SET FORTH ABOVE, OLYMPUS MAKES NO AND DISCLAIMS ALL OTHER REPRESENTATIONS, GUARANTIES, CONDITIONS, AND WARRANTIES CONCERNING THE PRODUCTS, WHETHER DIRECT OR INDIRECT, EXPRESS OR IMPLIED, OR ARISING UNDER ANY STATUTE, ORDINANCE, COMMERCIAL USAGE OR OTHERWISE, INCLUDING BUT NOT LIMITED TO ANY WARRANTY OR REPRESENTATION AS TO THE SUITABILITY, DURABILITY, DESIGN, OPERATION, OR CONDITION OF THE PRODUCTS (OR ANY PART THEREOF) OR THE MERCHANTABILITY OF THE PRODUCTS OR THEIR FITNESS FOR A PARTICULAR PURPOSE, OR RELATING TO THE INFRINGEMENT OF ANY PATENT, COPYRIGHT, OR OTHER PROPRIETARY RIGHT USED OR INCLUDED THEREIN.

IF ANY IMPLIED WARRANTIES APPLY AS A MATTER OF LAW, THEY ARE LIMITED IN DURATION TO THE LENGTH OF THIS LIMITED WARRANTY.

SOME STATES MAY NOT RECOGNIZE A DISCLAIMER OR LIMITATION OF WARRANTIES AND/OR LIMITATION OF LIABILITY SO THE ABOVE DISCLAIMERS AND EXCLUSIONS MAY NOT APPLY.

THE CUSTOMER MAY ALSO HAVE DIFFERENT AND/OR ADDITIONAL RIGHTS AND REMEDIES THAT VARY FROM STATE TO STATE.

THE CUSTOMER ACKNOWLEDGES AND AGREES THAT OLYMPUS SHALL NOT BE RESPONSIBLE FOR ANY DAMAGES THAT THE CUSTOMER MAY INCUR FROM DELAYED SHIPMENT, PRODUCT FAILURE, PRODUCT DESIGN, SELECTION, OR PRODUCTION, IMAGE OR DATA LOSS OR IMPAIRMENT OR FROM ANY OTHER CAUSE, WHETHER LIABILITY IS ASSERTED IN CONTRACT, TORT (INCLUDING NEGLIGENCE AND STRICT LIABILITY) OR OTHERWISE. IN NO EVENT SHALL OLYMPUS BE LIABLE FOR ANY INDIRECT, INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES OF ANY KIND (INCLUDING WITHOUT LIMITATION LOSS OF PROFITS OR LOSS OF USE), WHETHER OR NOT OLYMPUS SHALL BE OR SHOULD BE AWARE OF THE POSSIBILITY OF SUCH POTENTIAL LOSS OR DAMAGE.

Representations and warranties made by any person, including but not limited to dealers, representatives, salespersons, or agents of Olympus, which are inconsistent or in conflict with or in addition to the terms of this limited warranty, shall not be binding upon Olympus unless reduced to writing and approved by an expressly authorized officer of Olympus.

This limited warranty is the complete and exclusive statement of warranty which Olympus agrees to provide with respect to the Products and it shall supersede all prior and contemporaneous oral or written agreements, understandings, proposals, and communications pertaining to the subject matter hereof.

This limited warranty is exclusively for the benefit of the original customer and cannot be transferred or assigned.

WHAT TO DO WHEN SERVICE IS NEEDED

The customer must transfer any image or other data saved on a Product to another image or data storage medium and/or remove any film from the Product prior to sending the Product to Olympus for service.

IN NO EVENT SHALL OLYMPUS BE RESPONSIBLE FOR SAVING, KEEPING OR MAINTAINING ANY IMAGE OR DATA SAVED ON A PRODUCT RECEIVED BY IT FOR SERVICE, OR ON ANY FILM CONTAINED WITHIN A PRODUCT RECEIVED BY IT FOR SERVICE, NOR SHALL OLYMPUS BE RESPONSIBLE FOR ANY DAMAGES IN THE EVENT ANY IMAGE OR DATA IS LOST OR IMPAIRED WHILE SERVICE IS BEING PERFORMED (INCLUDING, WITHOUT LIMITATION, DIRECT, INDIRECT, INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES, LOSS OF PROFITS OR LOSS OF USE), WHETHER OR NOT OLYMPUS SHALL BE OR SHOULD BE AWARE OF THE POSSIBILITY OF SUCH POTENTIAL LOSS OR IMPAIRMENT.

Package the Product carefully using ample padding material to prevent damage in transit and either deliver it to the Authorized Olympus Dealer that sold you the Product or ship it postage prepaid and insured to any of our Olympus Service Centers.
When returning Products for service, your package should include the following:
1. Sales receipt showing date and place of purchase.
2. Copy of this limited warranty bearing the Product serial number corresponding to the serial number on the Product (unless it is a model on which Olympus does not place and record serial numbers).
3. A detailed description of the problem.
4. Sample prints, negatives, digital prints (or files on disk) if available and related to the problem.

When service is completed, the Product will be returned to you postage prepaid.

WHERE TO SEND PRODUCT FOR SERVICE
See “WORLDWIDE WARRANTY” for the nearest service center.

INTERNATIONAL WARRANTY SERVICE
International warranty service is available under this warranty.

For customers in Europe
“CE” mark indicates that this product complies with the European requirements for safety, health, environment and customer protection. “CE” mark cameras are intended for sales in Europe.
This symbol [crossed-out wheeled bin WEEE Annex IV] indicates separate collection of waste electrical and electronic equipment in the EU countries.
Please do not throw the equipment into the domestic refuse.
Please use the return and collection systems available in your country for the disposal of this product.
This symbol [crossed-out wheeled bin Directive 2006/66/EC Annex II] indicates separate collection of waste batteries in the EU countries.
Please do not throw the batteries into the domestic refuse.
Please use the return and collection systems available in your country for the disposal of the waste batteries.

Provisions of warranty
1. If this product proves to be defective, although it has been used properly (in accordance with the written Handling Care and Operating instructions supplied with it), during the applicable national warranty period and has been purchased from an authorized Olympus distributor within the business area of Olympus Europa SE & Co. KG as stipulated on the website: http://www.olympus.com this product will be repaired, or at Olympus’s option replaced, free of charge. To claim under this warranty the customer must take the product before the end of the applicable national warranty period to the dealer where the product was purchased or any other Olympus service station within the business area of Olympus Europa SE & Co. KG as stipulated on the website: http://www.olympus.com.
During the one year period of the World Wide Guarantee the customer may turn the product in at any Olympus service station. Please notice that not in all countries such Olympus service station exists.

2. The customer shall transport the product to the dealer or Olympus authorized service station at his own risk and shall be responsible for any costs incurred in transporting the product.

Provisions of Guarantee
1. “OLYMPUS IMAGING CORP.” grants a one year World Wide Guarantee. This worldwide Guarantee must be presented at an Olympus authorized repair service station before any repair can be made under conditions of this Guarantee. This Guarantee is valid only if the Guarantee Certificate and proof of purchase are presented at the Olympus repair service station. Please note that this Guarantee is in addition to and does not affect the customer’s legal warranty rights under the applicable national legislation governing the sale of consumer goods mentioned above.

2. This Guarantee does not cover the following and the customer will be required to pay repair charge, even for defects occurring within the Guarantee period referred to above.
(a) Any defect that occurs due to mishandling (such as an operation performed that is not mentioned in the Handling Care or other sections of the instructions, etc.)
(b) Any defect that occurs due to repair, modification, cleaning, etc. performed by anyone other than Olympus or an Olympus authorized service station.
SAFETY PRECAUTIONS

(c) Any defect or damage that occurs due to transport, a fall, shock, etc. after purchase of the product.
(d) Any defect or damage that occurs due to fire, earthquake, flood damage, thunderbolt, other natural disasters, environmental pollution and irregular voltage sources.
(e) Any defect that occurs due to careless or improper storage (such as keeping the product under conditions of high temperature and humidity, near insect repellents such as naphthalene or harmful drugs, etc.), improper maintenance, etc.
(f) Any defect that occurs due to exhausted batteries, etc.
(g) Any defect that occurs due to sand, mud, etc. entering the inside of the product casing.
(h) When the Guarantee Certificate is not returned with the product.
(i) When any alterations whatsoever are made to the Guarantee Certificate regarding the year, month and date of purchase, the customer's name, the dealer's name, and the serial number.
(j) When proof of purchase is not presented with this Guarantee Certificate.

Olympus reserves the right to refuse free-of-charge service if neither Guarantee Certificate is completed nor the above document is attached or if the information contained in it is incomplete or illegible.

2 Since this Guarantee Certificate will not be re-issued, keep it in a safe place.
   • Please refer to the list on the web site: http://www.olympus.com for the authorized international Olympus service network.

Trademarks

• IBM is a registered trademark of International Business Machines Corporation.
• Microsoft and Windows are registered trademarks of Microsoft Corporation.

• “PENPAL” is used in reference to the OLYMPUS PENPAL.
• The standards for camera file systems referred to in this manual are the “Design Rule for Camera File System/DCF” standards stipulated by the Japan Electronics and Information Technology Industries Association (JEITA).

Notes regarding Guarantee maintenance

1 This Guarantee will only be valid if the Guarantee Certificate is duly completed by Olympus or an authorized dealer or other documents contain sufficient proof. Therefore, please make sure that your name, the name of the dealer, the serial number and the year, month and date of purchase are all completed or the original invoice or the sales receipt (indicating the dealer's name, the date of purchase and product type) is attached to this Guarantee Certificate.

Olympus reserves the right to refuse free-of-charge service if neither Guarantee Certificate is completed nor the above document is attached or if the information contained in it is incomplete or illegible.

2 Since this Guarantee Certificate will not be re-issued, keep it in a safe place.
   • Please refer to the list on the web site: http://www.olympus.com for the authorized international Olympus service network.
