Printing pictures

Direct printing (PictBridge)

By connecting the camera to a PictBridge-compatible printer, you can print out pictures directly. Select the pictures you want to print and the number of prints on the camera’s monitor.

To find out if your printer is compatible with PictBridge, refer to the printer’s instruction manual.

What is PictBridge?
A standard for connecting digital cameras and printers of different makers and printing out pictures directly.

- Available printing modes, paper sizes etc., vary depending on the printer you use. Refer to the instruction manual for your printer.
- For details of printing paper types, ink cassettes, etc., refer to the printer’s instruction manual.

Printing pictures

[EASY PRINT] can be used to print out the picture displayed on the monitor. Your printer’s standard settings are used. The date and file name are not printed.

STANDARD

All printers that support PictBridge have standard print settings. If [STANDARD] is selected on the settings screens (P.31), pictures are printed according to these settings. Refer to the printer’s instruction manual for its standard settings or contact the printer manufacturer.

1. Display the picture you want to print out on the monitor in playback mode.
2 Turn the printer on and plug the USB cable provided with the camera into the USB connector of the camera and the printer’s USB port.

Print settings (DPOF)

How to make print reservations
Print reservation allows you to save printing data (the number of prints and the date and time information) with the pictures stored on the card. With print reservation, you can print out pictures easily either at home using a personal DPOF-compatible printer or at a photo store that supports DPOF. DPOF is a standard format used to record automatic print information from digital cameras.

Only the images stored on the card can be reserved to print. Insert a card with recorded pictures into the camera before making print reservations.

Pictures with print reservations can be printed using the following procedures.

Printing using a DPOF-compatible photo store.
The pictures are printed according to the reserved information.

Printing using a DPOF-compatible printer.
Printing is possible directly from a card containing print reservation data, without using a computer. For more details, refer to the printer’s instruction manual. A PC card adapter may also be necessary.
Note
• DPOF reservations set by another device cannot be changed by this camera. Make changes using the original device. If a card contains DPOF reservations set by another device, entering reservations using this camera may overwrite the previous reservations.
• You can make DPOF print reservations for up to 999 images per card.
• Not all functions may be available on all printers, or at all photo stores.

To use print services without using DPOF
• Pictures stored in the internal memory cannot be printed at a photo store. The pictures need to be copied to a card before taking them to the photo store. “BACKUP Copying pictures in the internal memory to the card” (P.25)

Using OLYMPUS Master

Flow

Using the USB cable provided with your camera, you can connect the camera and computer and download (transfer) the images to your computer using the OLYMPUS Master software, also provided with the camera.

Prepare the following items before starting.

- Install the OLYMPUS Master software
- Connect the camera to the computer using the USB cable
- Start up the OLYMPUS Master software
- Download image files to the computer
- Disconnect the camera from the computer

What is OLYMPUS Master?

OLYMPUS Master is application software for editing images taken with a digital camera on a computer. Installing it on your computer lets you do the following:

- Download images from the camera or other media
- View images and movies
  - You can run a slideshow and play back movies.
- Manage images
  - You can organize your images using the calendar display. Search the image you want by date or keyword.
- Edit images
  - You can rotate images, trim them and change the size.
- Edit images with the filter and correction functions

- Print images
  - You can print images and make indexes, calendars and postcards.
- Make panoramic images

5 Select the thumbnail image that you want to print and click “Add”.
   • A preview of the selected image is displayed on the layout.

6 Select the number of copies.

7 Click “Print”.
   • Printing starts.
   • To return to the main menu, click “Menu” in the “Photo Print” window.
To download and save images to a computer without using OLYMPUS Master

This camera is compatible with USB mass storage. You can connect the camera to your computer using the USB cable provided with the camera to download and save images without using OLYMPUS Master. The following environment is required to use the USB cable to connect the camera to your computer.

Windows: Windows 98SE/Me/2000 Professional/XP

Macintosh: Mac OS 9.0 to 9.2/X

Note

- If your computer is running Windows 98SE, you will need to install the USB driver. Before connecting the camera to your computer with the USB cable, double-click the files from the following folders on the provided OLYMPUS Master CD-ROM.
  (Drive name): \USB\INSTALL.EXE
- Data transfer is not guaranteed in the following environments, even if your computer is equipped with a USB port.
  - Windows 95/98/NT 4.0
  - Windows 98SE upgrades from Windows 95/98
  - Mac OS 8.6 or earlier
  - Computers with a USB port added by means of an extension card, etc.
  - Computers without a factory-installed OS and home-built computers
To increase the number of languages

Please take care that your battery is fully charged!

1. Make sure that your PC is connected to the Internet. Click “Update Camera” on the OLYMPUS Master main menu.
   - After selecting the Update Camera function, OLYMPUS Master shows a Window with security advices.

2. Plug the USB cable into the USB port on the computer.

3. Plug the other end of the USB cable into the camera’s USB connector.
   - The camera turns on automatically.
   - The monitor turns on and the selection screen for the USB connection is displayed.

4. Select [PC], and press OK.

5. Click “OK”.
   - OLYMPUS Master will recognize the actual version of your camera now.
   - Click “Check for latest version” and the Software is searching at the Olympus Homepage for new Camera firmware versions and for additional languages. Then you can select an additional language.

6. After click “Update” is now downloading the new language to your camera. Please do not remove any cable or the battery while the camera is processing.

7. After the download procedure the camera display will show “OK”. You can remove the cables and turn power off. After restarting the camera you will be able to choose the new language from [SET UP].

Shooting tips and information

Tips before you start taking pictures

The camera does not turn on even when a battery is loaded

The battery is inserted incorrectly
• Remove the batteries and insert them correctly.

There is not enough power left in the battery
• Insert new batteries. Or, charge the battery.

The battery is temporarily unable to function because of the cold
• Battery performance declines in low temperatures, and the charge may not be sufficient to turn on the camera. Remove the battery and warm it by putting it in your pocket for a while.

No picture is taken when the shutter button is pressed

The camera is in sleep mode
• To save battery power, the camera automatically goes into sleep mode and the monitor turns off if there is no operation when the camera is turned on (when the lens is extended and the monitor is on). No picture is taken even if the shutter button is fully pressed in this mode. Operate the zoom button or other buttons to restore the camera from sleep mode before taking a picture. If the camera is left for 15 minutes, it automatically turns off (the lens retracts and the monitor turns off). When the power is turned on in the playback mode, the camera does not enter the sleep mode but just turns off automatically after about three minutes. Press POWER to turn the camera on.

The mode dial is in the position of GUIDE
• No pictures can be taken when the guide is being displayed. Do the settings according to the guide and then shoot a picture or set the mode dial to something other than GUIDE and shoot a picture.

The flash is charging
• Wait until the (flash charge) mark stops blinking before pushing the shutter button again.

The date and time have not been set

The camera has been used in the same conditions from the time of purchase
• No date and time have been set for the camera at the time of purchase. Set the date and time before using the camera.

“Set date and time” (P.6), “Setting the date and time” (P.26)

The battery has been pulled out of the camera
• The date and time settings will be returned to the factory default settings if the camera is left without batteries for approximately 1 day. Before taking important pictures, check that the date and time settings are correct.
Shooting tips

Focusing on the subject
There are several ways to focus, depending on the subject.

When the subject is not in the center of the frame
- Place the subject in the center of the frame, lock the focus on the subject, and then recompose your picture.

"Shutter button Shooting pictures" (P.10)

The subject is moving quickly
- Focus the camera on a point roughly the same distance away as the subject you want to shoot (by pressing the shutter button halfway), and then recompose your picture and wait for the subject to enter the frame.
- Select from SCENE to shoot pictures.

"SCENE Shooting pictures by selecting a scene mode according to the situation" (P.11)

Subjects that are difficult to focus on
- Under certain types of conditions, it is difficult to focus using auto focus. The green lamp on the monitor lights, allowing you to check if the focus is locked.

The green lamp blinks. The subject cannot be brought into focus.

Subject with low contrast
Subject with an extremely bright area in the center of the frame
Subject without vertical lines

The green lamp lights, but the subject cannot be brought into focus.

Subjects at different distances
Fast-moving subject
The subject is not in the center of the frame

In these cases, focus (focus lock) on an object with high contrast at the same distance as the intended subject, recompose your shot and then take the picture. If the subject has no vertical lines, hold the camera vertically and focus the camera using the focus lock function by pressing the shutter button halfway, and then return the camera to the horizontal position while keeping the button pressed halfway and take the picture.

Taking pictures without blurring
Hold the camera in a correct posture and press the shutter button slowly. You can reduce the blurring by shooting the picture in mode.

The factors that can cause the picture to blur are as follows:
- Images are shot using a zooming function of high magnification.
- The object is dark and the shutter speed is slow.
- The flash cannot be used or when a low shutter speed shooting mode is selected.
Taking pictures without the flash

The flash is activated automatically when there is insufficient light and the camera is shaken. To take pictures without using the flash even when it is dark, first set the flash mode to [3] and then do the following setting.

Set the camera to ([]) mode
- Because the sensitivity of the CCD increases automatically, you can hold the camera and take pictures in darker places with the flash off.
  “Shooting pictures using digital image stabilization” (P.11)

The picture is too grainy

There are several factors that can cause the picture to appear grainy.

Using the digital zoom to take close-up pictures
- With the digital zoom, part of the image is cropped and enlarged. The greater the magnification, the grainier the picture appears.

Shooting pictures with the mode dial set to ( ), or SCENE mode set to ( )
- When shooting pictures in the above modes, the picture may appear grainy if the subject is dark.
  “Shooting pictures according to the situation” (P.11)

Taking pictures of a white beach or snow scene
- Often, bright subjects (such as snow) turn out darker than their natural colors. Adjust [EXPOSURE COMP.] toward [+] to make these subjects closer to their real shades. Conversely, when you are shooting dark subjects, it can be effective to adjust toward the [-]. Sometimes, using the flash may not produce the brightness (exposure) that was intended.
  “EXPOSURE COMP. Changing the brightness of the picture” (P.20)

Taking pictures of a subject against backlight
- Set the flash to [ ] to activate fill-in-flash. You can shoot a subject against backlight without the face of the subject appearing dark. [ ] is effective for shooting against backlight and under fluorescent and other artificial lighting as well as backlit subjects.
  “Flash shooting” (P.15)
Getting to know your camera better

There are two ways to record the pictures you take with this camera.

Recording pictures to the internal memory
- Pictures are recorded to the internal memory, and when the number of storable still pictures reaches 0, you must connect the camera to a computer to download the pictures, and then erase the pictures from the internal memory.

Using an xD-Picture Card (optional)
- Pictures are recorded to the card when inserted in the camera. When the card is full, you download the pictures to a computer, and then either erase the pictures from the card or use a new card.
- Pictures are not recorded to the internal memory when a card is inserted in the camera. Pictures in the internal memory can be copied to the card using the [BACKUP] function.

Extending the useful life of the battery
- Performing any of the following operations when not actually taking pictures can deplete the battery power.
  - Repeatedly pressing the shutter button halfway
  - Repeatedly using the zoom
  - To save battery power, turn off the camera whenever it is not in use.

Functions that cannot be selected from menus
- Some items may not be selectable from the menus when using the arrow pad.
  - Items that cannot be set with the current shooting mode
  - Items that cannot be set because of an item that has already been set: [��要], [設定], etc.
- Some functions cannot be used when there is no card in the camera.

Playback tips

Playing back the pictures in the internal memory

A card is inserted in the camera

• When a card has been inserted in the camera, the pictures in the internal memory cannot be played back. Pull out the card before operating the camera.

Quickly displaying a desired picture

• Press W on the zoom button to view the pictures as thumbnails (index display).
  “Zoom button Zooming in and out while shooting or playing back pictures” (P.13)

Viewing pictures on a computer

Viewing the entire picture on a computer screen

The size of the picture displayed on a computer screen changes depending on the computer settings. When the monitor setting is 1,024 × 768 and you are using Internet Explorer to view a picture with an image size of 2,048 × 1,536 at 100%, the entire picture cannot be viewed without scrolling. There are several ways you can view the entire picture on the computer screen.

View the picture using image browsing software

• Install the OLYMPUS Master software from the provided CD-ROM.

Change the monitor setting

• The icons on the computer desktop may be rearranged. For details on changing the settings on your computer, refer to the computer’s instruction manual.

Camera care

Cleaning the camera

Exterior:
• Wipe gently with a soft cloth. If the camera is very dirty, soak the cloth in mild soapy water and wring well. Wipe the camera with the damp cloth and then dry it with a dry cloth. If you have used the camera at the beach, use a cloth soaked in clean water and wrung well.

Monitor:
• Wipe gently with a soft cloth.

Lens:
• Blow dust off the lens with a commercial blower, then wipe gently with a lens cleaner.

⚠️ Note
• Do not use strong solvents such as benzene or alcohol, or chemically treated cloth.
• Mold may form on the lens surface if the lens is left dirty.

Storage
• When storing the camera for extended periods, remove the battery, AC adapter and card, and keep in a cool, dry place that is well ventilated.
• Periodically insert the battery and test the camera functions.

⚠️ Note
• Avoid leaving the camera in places where chemical products are handled since this may result in corrosion.

The battery

In addition to the batteries provided with the camera, the following types of battery can be used. Choose the power source best suited to the situation.

**AA alkaline batteries/ Oxyride batteries**
The number of pictures that you can take may vary considerably depending on the battery manufacturer and shooting conditions.

**AA NiMH batteries (rechargeable batteries)**
Olympus NiMH batteries are rechargeable and economical. For details, refer to the instruction manual for your charger.

**Lithium battery packs (CR-V3) and AA manganese (zinc-carbon) batteries cannot be used.**

Power consumption by the camera varies depending on which functions are used.

Power is consumed continuously during the conditions described below causing batteries to become exhausted quickly.
• The zoom is used repeatedly.
• The shutter button is pressed halfway repeatedly in shooting mode, activating the auto focus.
• The monitor is left on for an extended period of time.
• The camera is connected to a computer or printer.
The battery life varies widely depending on the type of battery, manufacturer, shooting conditions, etc. Because of this, there may be cases where the camera turns itself off without displaying the battery level warning, or displays the battery level warning sooner than usual.

**Useful use of the accessories**

**The card**

Pictures can be recorded on the optional card. The internal memory and card are the camera’s media for recording pictures, similar to film in a film camera. Pictures recorded to the internal memory or card can be easily erased on the camera or processed using a computer. Unlike portable storage media, the internal memory cannot be removed or exchanged. The number of recordable pictures can be increased by using a card with a larger capacity.

1. **Index area**
   You can use this space to write the contents of the card.

2. **Contact area**
   The part where the data transferred from the camera enters the card.

**Compatible cards**
xD-Picture Card (16MB – 1GB)

**Using the internal memory or card**

You can confirm on the monitor whether the internal memory or card is being used during shooting and playback operations.

Memory indicator
[IN]: Internal memory
[xD]: Card
Inserting and removing the card

1. Turn off the camera.

2. Open the battery/card compartment cover.

Inserting the card

3. Orient the card as shown, and insert it into the card slot as shown in the illustration.
   - Insert the card straight in.
   - Insert the card until it clicks into place.

Removing the card

4. Push the card all the way in and release slowly.
   - The card protrudes slightly and stops.
   - Grasp the card and remove it.
5 Close the battery/card compartment cover.

Note
- The card access lamp blinks while the camera is reading the images. Reading of images may take some time. Do not open the battery compartment/card cover while the card access lamp is blinking. Doing so may damage the data in the internal memory or the card and render the internal memory or card unusable.

AC adapter
An AC adapter is useful for time-consuming tasks such as image downloads to a computer or when running a slideshow for a long period of time. To use the AC adapter (optional) with this camera. Do not use any other AC adapter with this camera.

Note
- Do not remove or load the battery or connect or disconnect the AC adapter while the camera is on or the camera is connected to the other equipment. Doing so could affect the camera’s internal settings or functions.
- The AC adapter can be used within the range of AC 100 V to AC 240 V (50/60 Hz). When using the shape of abroad, you may need a plug adapter to convert the plug to match the AC wall outlet. For details, ask at your local electrical shop or travel agent.
- Do not use travel voltage converters as they could damage the AC adapter.
- Be sure to read the instruction manual for the AC adapter.
SAFETY PRECAUTIONS

General Precautions

Read All Instructions — Before you use the product, read all operating instructions. Save all manuals and documentation for future reference.

Cleaning — Always unplug this product from the wall outlet before cleaning. Use only a damp cloth for cleaning. Never use any type of liquid or aerosol cleaner, or any type of organic solvent to clean this product.

Attachments — For your safety, and to avoid damaging the product, use only accessories recommended by Olympus.

Water and Moisture — For precautions on products with weatherproof designs, read the weatherproofing sections.

Location — To avoid damage to the product, mount the product securely on a stable tripod, stand, or bracket.

Power Source — Connect this product only to the power source described on the product label.

Lightning — If a lightning storm occurs while using an AC adapter, remove it from the wall outlet immediately.

Foreign Objects — To avoid personal injury, never insert a metal object into the product.

Heat — Never use or store this product near any heat source such as a radiator, heat register, stove, or any type of equipment or appliance that generates heat, including stereo amplifiers.

WARNING!
TO AVOID THE RISK OF FIRE OR ELECTRICAL SHOCK, NEVER DISASSEMBLE, EXPOSE THIS PRODUCT TO WATER OR OPERATE IN A HIGH HUMIDITY ENVIRONMENT.
Product Handling Precautions

⚠️ WARNING

- Do not use the camera near flammable or explosive gases.
- Do not use the flash on people (infants, small children, etc.) at close range.
  - You must be at least 1 m (3 ft.) away from the faces of your subjects. Firing the flash too close to the subject’s eyes could cause a momentary loss of vision.
- Keep young children and infants away from the camera.
  - Always use and store the camera out of the reach of young children and infants to prevent the following dangerous situations which could cause serious injury:
    - Becoming entangled in the camera strap, causing strangulation.
    - Accidentally swallowing the battery, cards or other small parts.
    - Accidentally firing the flash into their own eyes or those of another child.
    - Accidentally being injured by the moving parts of the camera.
- Do not look at the sun or strong lights with the camera.
- Do not use or store the camera in dusty or humid places.
- Do not cover the flash with a hand while firing.

⚠️ CAUTION

- Stop using the camera immediately if you notice any unusual odors, noise, or smoke around it.
  - Never remove the batteries with bare hands, which may cause a fire or burn your hands.
- Never hold or operate the camera with wet hands.
- Do not leave the camera in places where it may be subject to extremely high temperatures.
  - Doing so may cause parts to deteriorate and, in some circumstances, cause the camera to catch fire. Do not use the charger or AC adapter if it is covered (such as a blanket). This could cause overheating, resulting in fire.
- Handle the camera with care to avoid getting a low-temperature burn.
  - When the camera contains metal parts, overheating can result in a low-temperature burn. Pay attention to the following:
    - When used for a long period, the camera will get hot. If you hold on to the camera in this state, a low-temperature burn may be caused.
    - In places subject to extremely cold temperatures, the temperature of the camera’s body may be lower than the environmental temperature. If possible, wear gloves when handling the camera in cold temperatures.
- Be careful with the strap.
  - Be careful with the strap when you carry the camera. It could easily catch on stray objects - and cause serious damage.

Battery Handling Precautions

Follow these important guidelines to prevent batteries from leaking, overheating, burning, exploding, or causing electrical shocks or burns.

⚠️ DANGER

- Use only the Olympus brand NiMH batteries and fitting charger.
- Never heat or incinerate batteries.
- Take precautions when carrying or storing batteries to prevent them from coming into contact with any metal objects such as jewelry, pins, fasteners, etc.
- Never store batteries where they will be exposed to direct sunlight, or subjected to high temperatures in a hot vehicle, near a heat source, etc.
- To prevent causing battery leaks or damaging their terminals, carefully follow all instructions regarding the use of batteries. Never attempt to disassemble a battery or modify it in any way, by soldering, etc.
- If battery fluid gets into your eyes, flush your eyes immediately with clear, cold running water and seek medical attention immediately.
- Always store batteries out of the reach of small children. If a child accidentally swallows a battery, seek medical attention immediately.

⚠️ WARNING

- Keep batteries dry at all times.
- To prevent batteries from leaking, overheating, or causing a fire or explosion, use only batteries recommended for use with this product.
- Never mix batteries (old and new batteries, charged and uncharged batteries, batteries of different manufacture or capacity, etc.).
- Do not charge alkaline or lithium batteries if they are not rechargeable.
- Insert the battery carefully as described in the operating instructions.
• Do not use batteries if their body is not covered by the insulating sheet or if the sheet is torn, as this may cause fluid leaks, fire, or injury.

**CAUTION**

• Do not remove batteries immediately after using the camera. Batteries may become hot during prolonged use.
• Always unload the battery from the camera before storing the camera for a long period.

**The following AA batteries cannot be used.**

- Batteries whose bodies are only partially or not at all covered by an insulating sheet.
- Batteries whose terminals are raised, but not covered by an insulating sheet.
- Batteries whose terminals are flat and not completely covered by an insulating sheet. (Such batteries cannot be used even if the terminals are partially covered.)

• If NiMH batteries are not charged within the specified time, stop charging them and do not use them.
• Do not use a battery if it is cracked or broken.
• If a battery leaks, becomes discolored or deformed, or becomes abnormal in any other way during operation, stop using the camera.
• If a battery leaks fluid onto your clothing or skin, remove the clothing and flush the affected area with clean, running cold water immediately. If the fluid burns your skin, seek medical attention immediately.
• Never subject batteries to strong shocks or continuous vibration.
• Olympus NiMH batteries (included in some areas) are intended for use only with Olympus digital cameras. Never use these batteries with any other device.
• Always charge NiMH batteries (included in some areas) before using them for the first time, or if they have not been used for a long period.
• Always charge sets of batteries (included in some areas) (2 or 4) together.
• Do not use alkaline batteries unless it is absolutely necessary. In some cases, alkaline batteries may have a shorter service life than NiMH battery packs. Alkaline battery performance is limited, especially at low temperatures. The use of NiMH batteries is recommended.
• CR-V3 lithium battery packs and AA manganese (Zinc-Carbon) batteries cannot be used with this camera.
• When operating the camera with battery power at low temperatures, try to keep the camera and spare batteries as warm as possible. Batteries which run down at low temperatures may be restored after they are warmed at room temperature.
• Recommended temperature ranges for NiMH batteries:
  - Operation: 0°C to 40°C (32°F to 104°F)
  - Charge: 0°C to 40°C (32°F to 104°F)
  - Storage: -20°C to 30°C (–4°F to 86°F)
• Using, charging, or storing the batteries outside these ranges could shorten battery life or affect battery performance. Always unload the batteries from the camera before storing the camera for a long period.
• Before using NiMH or NiCd batteries, always read the provided instructions.
• The number of pictures you can take may vary depending on the shooting conditions or batteries.
• Before going on a long trip, and especially before traveling abroad, purchase an ample supply of extra batteries. The recommended batteries may be difficult to obtain while traveling.

### Caution for Usage Environment

• To protect the high-precision technology contained in this product, never leave the camera in the places listed below, no matter if in use or storage:
  - Places where temperatures and/or humidity are high or go through extreme changes. Direct sunlight, beaches, locked cars, or near other heat sources (stove, radiator, etc.) or humidifiers.
  - Near flammable items or explosives.
  - In wet places, such as bathrooms or in the rain. When using products with weatherproof designs, read their manuals as well.
  - In places prone to strong vibrations.
  - Never drop the camera or subject it to severe shocks or vibrations.
  - When mounted on a tripod, adjust the position of the camera with the tripod head. Do not twist the camera.
  - Do not touch electric contacts on cameras.
• Do not leave the camera pointed directly at the sun. This may cause lens or shutter curtain damage, color failure, ghosting on the CCD, or may possibly cause fires.
• Do not push or pull severely on the lens.
• Before storing the camera for a long period, remove the battery. Select a cool, dry location for storage to prevent condensation or mold from forming inside the camera. After storage, test the camera by turning it on and pressing the shutter release button to make sure that it is operating normally.
• Always observe the operating environment restrictions described in the camera’s manual.

**LCD Monitor**

• Do not push the monitor forcibly; otherwise the image may become vague, resulting in a playback mode failure or damage to the monitor.
• A strip of light may appear on the top/bottom of the monitor, but this is not a malfunction.
• When a subject is viewed diagonally in the camera, the edges may appear zigzagged on the monitor. This is not a malfunction; it will be less noticeable in playback mode.
• In places subject to low temperatures, the LCD monitor may take a long time to turn on or its color may change temporarily. When using the camera in extremely cold places, it is a good idea to occasionally place it in a warm place. An LCD monitor exhibiting poor performance due to low temperatures will recover in normal temperatures.
• The LCD used for the monitor is made with high-precision technology. However, black spots or bright spots of light may appear constantly on the LCD Monitor. Due to its characteristics or the angle at which you are viewing the monitor, the spot may not be uniform in color and brightness. This is not a malfunction.

**FCC Notice**

• Radio and Television Interference
  Changes or modifications not expressly approved by the manufacturer may void the user’s authority to operate this equipment. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined
by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- Adjust or relocate the receiving antenna.
- Increase the distance between the camera and receiver.
- Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- Consult your dealer or an experienced radio/TV technician for help. Only the OLYMPUS-supplied USB cable should be used to connect the camera to USB enabled personal computers (PC).

Any unauthorized changes or modifications to this equipment would void the user’s authority to operate it.

Please do not throw the equipment into the domestic refuse. Please use the return and collection systems available in your country for the disposal of this product.
Use Only Dedicated Rechargeable Battery and Battery Charger
We strongly recommend that you use only the genuine Olympus dedicated rechargeable battery and battery charger with this camera.
Using a non-genuine rechargeable battery and/or battery charger may result in fire or personal injury due to leakage, heating, ignition or damage to the battery. Olympus does not assume any liability for accidents or damage that may result from the use of a battery and/or battery charger that are not genuine Olympus accessories.

Provisions of warranty
1. If this product proves to be defective, although it has been used properly (in accordance with the written Handling Care and Operating instructions supplied with it), during a period of two years from the date of purchase from an authorized Olympus distributor within the business area of Olympus Imaging Europa Gmbh as stipulated on the web site: http://www.olympus.com this product will be repaired, or at Olympus’s option replaced, free of charge. To claim under this warranty the customer must take the product and this Warranty Certificate before the end of the two year warranty period to the dealer where the product was purchased or any other Olympus service station within the business area of Olympus Imaging Europa Gmbh as stipulated on the web site: http://www.olympus.com. During the one year period of the World Wide Warranty the customer may turn the product in at any Olympus service station. Please notice that not in all countries such Olympus service station exists.
2. The customer shall transport the product to the dealer or Olympus authorized service station at his own risk and shall be responsible for any costs incurred in transporting the product.
3. This warranty does not cover the following and the customer will be required to pay repair charge, even for defects occurring within the warranty period referred to above.
   (a) Any defect that occurs due to mishandling (such as an operation performed that is not mentioned in the Handling Care or other sections of the instructions, etc.)
   (b) Any defect that occurs due to repair, modification, cleaning, etc. performed by anyone other than Olympus or an Olympus authorized service station.
   (c) Any defect or damage that occurs due to transport, a fall, shock, etc. after purchase of the product.
   (d) Any defect or damage that occurs due to fire, earthquake, flood damage, thunderbolt, other natural disasters, environmental pollution and irregular voltage sources.
   (e) Any defect that occurs due to careless or improper storage (such as keeping the product under conditions of high temperature and humidity, near insect repellents such as naphthalene or harmful drugs, etc.), improper maintenance, etc.
   (f) Any defect that occurs due to exhausted batteries, etc.
   (g) Any defect that occurs due to sand, mud, etc. entering the inside of the product casing.
   (h) When this Warranty Certificate is not returned with the product.
   (i) When any alterations whatsoever are made to the Warranty Certificate regarding the year, month and date of purchase, the customer’s name, the dealer’s name, and the serial number.
   (j) When proof of purchase is not presented with this Warranty Certificate.
4. This Warranty applies to the product only; the Warranty does not apply to any other accessory equipment, such as the case, strap, lens cap and batteries.
5. Olympus’s sole liability under this warranty shall be limited to repairing or replacing the product. Any liability for indirect or consequential loss or damage of any kind incurred or suffered by the customer due to a defect of the product, and in particular any loss or damage caused to any lenses, films, other equipment or accessories used with the product or for any loss resulting from a delay in repair or loss of data, is excluded. Compelling regulations by law remain unaffected by this.

Notes regarding warranty maintenance
1. This warranty will only be valid if the Warranty Certificate is duly completed by Olympus or an authorized dealer or other documents contain sufficient proof. Therefore, please make sure that your name, the name of the dealer, the serial number and the year, month and date of purchase are all completed or the original invoice or the sales receipt (indicating the dealer’s name, the date of purchase and product type) is attached to this Warranty Certificate. Olympus reserves the right to refuse free-of-charge service if neither Warranty Certificate is completed nor the above document is attached or if the information contained in it is incomplete or illegible.
2. Since this Warranty Certificate will not be re-issued, keep it in a safe place.
   * Please refer to the list on the web site: http://www.olympus.com for the authorized international Olympus service network.

Specifications

**Camera**

Product type: Digital camera (for shooting and displaying)

Recording system
- Still pictures: Digital recording, JPEG (DCF compatible)
- Applicable standards: Exif 2.2, DPOF, PRINT Image Matching III, PictBridge
- Movie: QuickTime Motion JPEG compatible

Memory: Internal memory
- xD-Picture Card (16 MB to 1 GB)

No. of effective pixels: 6,000,000 pixels

Image pickup device: 1/2.5" CCD (primary color filter), 6,200,000 pixels (gross)

Lens: Olympus lens 6.3 to 18.9 mm, F3.1 to 5.9
- (equivalent to 38 to 114 mm on 35 mm film)

Photometric system: Center-weighted metering

Shutter speed: 2 to 1/2,000 sec.

Shooting range: 0.1 m (0.3 ft.) to ∞ (W), 0.6 m (2.0 ft.) to ∞ (T) (normal/macro mode)
- 0.05 m (2.0 in.) to ∞ (super macro mode)

Monitor: 2.5" TFT color LCD display, 153,600 pixels

Outer connector: DC-IN jack, USB connector, VIDEO OUT jack

Automatic calendar system: Automatic update from 2000 to 2099

Operating environment
- Temperature: 0 to 40°C (32°F to 104°F) (operation)/-20 to 60°C (-4°F to 140°F) (storage)
- Humidity: 30 to 90% (operation)/10 to 90% (storage)

Power supply: AA batteries 2 each (Oxyride batteries/Alkaline battery/NiMH battery) or specified AC adapter

Dimensions: 90 mm (W) × 62.5 mm (H) × 22.5 mm (D) (3.5 × 2.5 × 0.9 in.) (excluding protrusions)

Weight: 124 g (4.4 oz) (without battery and card)
