Thank you for purchasing an Olympus digital camera. Before you start to use your new camera, please read these instructions carefully to enjoy optimum performance and a longer service life. Keep this manual in a safe place for future reference.

- We recommend that you take test shots to get accustomed to your camera before taking important photographs.
- In the interest of continually improving products, Olympus reserves the right to update or modify information contained in this manual.
- The screen and camera illustrations shown in this manual were produced during the development stages and may differ from the actual product.

## 5 Getting to know your camera better

### Shooting tips and information

#### Tips before you start taking pictures

- **The camera does not turn on even when a battery is loaded**
- **The battery is not fully charged**
  - Charge the battery with the charger.
- **The battery is temporarily unable to function because of the cold**
  - Battery performance declines in low temperatures, and the charge may not be sufficient to turn on the camera. Remove the battery and warm it by putting it in your pocket for a while.

- **No picture is taken when the shutter button is pressed**

1 Button operations

1 POWER button

Turning the camera on and off

<table>
<thead>
<tr>
<th>Power on:</th>
<th>Shooting mode</th>
<th>Playback mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monitor turns on</td>
<td>Lens extends</td>
<td>Monitor turns on</td>
</tr>
</tbody>
</table>

2 Shutter button

Shooting still pictures

Set the mode dial to P or SCN, and lightly press the shutter button (halfway). The green lamp lights when the focus and exposure are locked (focus lock). Now press the shutter button all the way (fully) to shoot a picture.

Locking the focus and then composing the shot (focus lock)

Compose your picture with the focus locked, and then fully press the shutter button to shoot a picture.

- When the green lamp blinks, the focus is not adjusted properly. Try locking the focus again.

Recording movies

Set the mode dial to MOVIE, and lightly press the shutter button to lock the focus, and then press the shutter button fully to start recording. Press the shutter button again to stop recording.
Set the mode dial to the desired shooting or playback mode.

The camera determines the optimum settings and shoots the picture.

You can shoot pictures by selecting a scene according to the situation.

- Press the [SCN] button to select [SCN] from the top menu, and change it to another scene.
- By switching to the other scene, most settings will be changed to the default settings of each scene.

Follow the shooting guide displayed on the screen to set the target items.

- To change the setting without using the shooting guide, set the shooting mode to another one.
- The content set using the shooting guide will change to the default setting by pressing the [SCN] button or changing the mode using the mode dial.

Audio is recorded with the movie.

This lights red during movie recording.

The remaining recording time is displayed.
When the remaining recording time reaches 0, recording stops.

The last picture taken is displayed.
- Press the arrow pad (△▽↔) to view other pictures.
- Use the zoom button to switch among close-up playback, index display and calendar display.

Movie playback “MOVIE PLAY Playing back movies” (P. 25)
Button operations

4 Arrow pad (△ ▽ ◀ ▶)

Use the arrow pad to select scenes, playback picture, and the items on the menus.

5 button (OK/FUNC)

Displays the function menu and sets the functions often used in shooting mode. This button is also used to confirm your selection.

The functions you can set with the function menu

P/AUTO .................................................. Shooting pictures with automatic settings

Select the shooting mode when you have set the mode dial to P.

- **P** (Program auto) The camera automatically sets the optimum aperture value and shutter speed for the brightness of the subject.
- **AUTO** (Full auto mode) The camera automatically sets white balance and ISO sensitivity in addition to the aperture and shutter speed.

- “WB Adjusting the color of a picture” (P. 21)
- “ISO Changing the ISO sensitivity” (P. 21)
- “DRIVE Continuous shooting” (P. 22)
- “ESP/ Changing the area for measuring the brightness of a subject” (P. 22)

Function menu

- ▲▼: Select a setting, and press .
- ◀▶: Select the setting items.
6 MENU button (MENU)

Displays the top menu.

7 Zoom button

Zooming while shooting/close-up playback

Shooting mode: Zooming in on your subject

Optical zoom: 3x

Zoom out:
Press W on the zoom button.

Zoom in:
Press T on the zoom button.

Playback mode: Switching the picture display

Single-frame playback

- Use the arrow pad (△ ▽ ◀ ▶) to browse pictures.

Index display

- Use the arrow pad (△ ▽ ◀ ▶) to select a picture for playback, and press ◀ to play back the single-frame of the picture selected.

Close-up playback

- Press T to incrementally enlarge the picture up to 10 times the original size. Press W to reduce the size.
- Press the arrow pad (△ ▽ ◀ ▶) during close-up playback to scroll the picture in the indicated direction.
- When returning to the single-frame playback, press ◀ or T on the zoom button.

Calendar display

- Use the arrow pad (△ ▽ ◀ ▶) to select the date, and press ◀ or T on the zoom button to display the pictures on the date selected.
Press the \[ \text{\textdagger} \text{\textdagger} \] button in shooting mode to select the flash mode. Press \[ \circ \] for setting.

<table>
<thead>
<tr>
<th>Flash mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AUTO (Auto-flash)</td>
<td>The flash fires automatically in low light or backlight conditions.</td>
</tr>
<tr>
<td>Red-eye reduction</td>
<td>This emits pre-flashes for red-eye reduction.</td>
</tr>
<tr>
<td>Fill-in flash</td>
<td>The flash fires regardless of the available light.</td>
</tr>
<tr>
<td>Flash off</td>
<td>The flash does not fire even in low light conditions.</td>
</tr>
</tbody>
</table>

Press the \[ \text{\textleaves} \] button in shooting mode to select the macro mode. Press \[ \circ \] for setting.

| Macro mode          | This mode lets you shoot from as close as 30cm/11.8 in. (when the zoom is set for the zoom-out angle) and as close as 50cm/19.6 in. (when the zoom is set for the zoom-in angle) to your subject. |
| Super macro mode    | This mode lets you shoot from as close as 10cm/3.9 in. to your subject.       |

Press the \[ \text{\textdiamond} \text{\textdiamond} \] button in shooting mode to select on and off of the self-timer. Press \[ \circ \] for setting.

<table>
<thead>
<tr>
<th>Self-timer shooting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>( \text{\textdiamond} \text{\textdiamond} ) ON</td>
<td>After the setting, press the shutter button fully.</td>
</tr>
<tr>
<td>( \text{\textdiamond} \text{\textdiamond} ) OFF</td>
<td>Cancel the self-timer.</td>
</tr>
</tbody>
</table>

- The self-timer lamp lights for approximately 10 seconds, blinks for approximately 2 seconds, and then the picture is taken.
- To cancel the self-timer, press the \[ \text{\textdiamond} \text{\textdiamond} \] button.
- Self-timer shooting is automatically canceled after one shot.
Button operations

11  △ button  Changing picture brightness

Press the  △ button in shooting mode to adjust the exposure.
• Adjustable from -2.0EV to +2.0 EV

Activate the setting contents.

▶: Brighten
◀: Darken

12  _FACTORY button  Erasing pictures

In playback mode, select the picture you want to erase, and press the  ★ button.
• Once erased, pictures cannot be restored. Check each picture before erasing to avoid accidentally erasing pictures you want to keep.
▶“Protecting pictures” (P. 29)

13  ( )/  button  Stabilizing digital image /Printing pictures

( )  Stabilizing digital image

Shooting mode: Shooting with digital image stabilization mode

This function stabilizes the blur caused by a moving subject or camera movement when taking pictures. To use this function, press the  ( )/  button in shooting mode.
• Shooting in a dark environment makes ISO higher, which may increase electrical noise, causing a rough image.
• By switching to the other mode, most settings will be changed to the default settings of each mode.

Playback mode: Stabilizing the recorded digital image

If the recorded digital image has any blur incurred by camera movement, the image will be stabilized and saved as a new one. Press the  ( )/  button in the playback mode and press the  ★ button.
• Pictures shot by the camera other than this camera or pictures edited by the PC cannot be fixed.

Printing pictures

When the printer is connected to the camera, display a picture to be printed out in playback mode, and press the  ( )/  button.
▶“EASY PRINT” (P. 41)
**Changing the information displays**

Press the DISP button to change the display in the following order.

**Shooting mode**

1. Normal display
2. Simple display*¹
3. FRAME ASSIST*¹*²
   (Horizontal and vertical lines or diagonal lines)
4. Histogram display*¹*²

*² Not displayed when the mode is set [OFF] in the menu.

Display the histogram” (P. 39)

“FRAME ASSIST Display the frame assist/Decide the type” (P. 39)
Displaying the menu guide

With menu items selected, hold down the \( \text{DISP} \) button to display the menu guide. Release the \( \text{DISP} \) button to close the menu guide.
2 Menu operations

About the menus

Press the MENU button to display the top menu. The items displayed on the top menu differ according to the mode.
• When the mode dial is set at GUIDE, press the MENU button to display the shooting guide screen.

Top menu in the shooting mode

Top menu in the playback mode

• When [CAMERA MENU], [PLAYBACK MENU], [EDIT], [ERASE], or [SETUP] is selected, the menu corresponding to the respective functions is displayed.

Menu displayed when [CAMERA MENU] is selected

Menu displayed when [PLAYBACK MENU] is selected
Using the menus

Use the arrow pad (△ ▼ ◀▶) and o to set menu items.
This explains how to use the menus with the [AF MODE] setting as an example.

Set the mode dial to the desired mode.
• In this case, set the mode dial to 📸.

1 Press the MENU button to display the top menu, and then press o.
• [AF MODE] is on a menu in [CAMERA MENU]. Press o.
• To display other menus, use the arrow pad (△ ▼ ◀▶) to select a menu, and press o.
• To close the top menu, press the MENU button.

2 Press △ ▼ to select a setting, and press o.
• [AF MODE] is the sixth menu item, so press ▼ five times, and then press o.
• Unavailable settings cannot be selected.

Operation guide

![Diagram of menu operations]
3 Press \(\uparrow\downarrow\) to select a setting, and press \(\text{OK}\).
   - Select the [AF MODE] from [iESP] and [SPOT] and then press \(\text{OK}\).
   - The menu item is set and the previous menu is displayed.

When there are more menu items on the next page, press \(\leftarrow\) on the procedure 2 screen to move the cursor to the page display. Press \(\uparrow\downarrow\) to change the page. To return to the previous page, press \(\rightarrow\) or \(\text{OK}\).

<tbody>
<tr>
<td>AUTO</td>
<td>Sensitivity is automatically adjusted according to the conditions of the subject.</td>
</tr>
<tr>
<td>64/100/200/400/800/1600/3200</td>
<td>A low value lowers the sensitivity for daylight shooting of clear, sharp pictures. The higher the value, the better the camera’s light sensitivity and ability to shoot with a fast shutter speed and in low light conditions. However, high sensitivity introduces noise into the resulting picture, which may give it a grainy appearance.</td>
</tr>
</tbody>
</table>

- When the camera is set to [3200], the [IMAGE QUALITY] is limited to [2048 × 1536] or less.
The camera will take pictures in sequence until you release the shutter button.
• In high speed sequential shooting, [IMAGE QUALITY] will be limited to below [2048 × 1536].

ESP/ESP ▼ ........... Changing the area for measuring the brightness of a subject

ESP Meters the brightness at the center of the monitor and the surrounding area separately to create a picture with balanced brightness. When taking pictures against strong backlight, the center of the picture may appear dark.

 Only the center of the monitor is metered. Suitable for taking a picture of the subject in the center of the monitor against backlight.

DIGITAL ZOOM ......................... Zooming in on your subject

The digital zoom can be used to take close-up pictures with stronger magnification than the optical zoom. (Optical zoom × Digital zoom: the maximum 15×)

White area: The optical zoom area
Red area: The digital zoom area
AF MODE ................................................................. Changing the focusing area

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>iESP</td>
<td>The camera determines which subject within the screen to focus on. Even when the subject is not in the center of the screen, focusing is possible.</td>
</tr>
<tr>
<td>SPOT</td>
<td>Focus selection is based on the subject within the AF target mark.</td>
</tr>
</tbody>
</table>

Recording starts about 0.5 seconds after the shutter button is released and lasts about 4 seconds. When recording, aim the camera microphone at the source of the sound you want to record.

PANORAMA .......................................................... Creating a panoramic picture

Panorama shooting lets you create a panoramic picture, using the OLYMPUS Master software from the provided CD-ROM. An Olympus xD-Picture Card is required for panorama shooting.

Use the arrow pad (△ ▽ ◄ ►) to specify at which edge you want to connect the pictures, and then compose your shots so that the edges of the pictures overlap. The part of the previous picture where it will be joined to the next picture does not remain in the frame. You have to remember what the part in the frame looked like and take the next picture so it overlaps.

Panorama shooting is possible for up to 10 pictures. Press button to exit panorama shooting.
When a still picture is selected

- [BGM] [ON] or [OFF]
- [TYPE]

When the move is selected

- [EDIT]
- [INDEX]

- [EDIT]
- [EDIT]
- [EDIT]
- [EDIT]
• Only the first frame of each movie is displayed.
• After setting [BGM] and [TYPE], press \( \text{\textcircled{}} \) to start the slideshow.
• Press \( \text{\textcircled{}} \) or \( \text{MENU} \) button to cancel the slideshow.

## 2 MOVIE PLAY

### Playing back movies

Select [MOVIE PLAY] from the top menu, and press \( \text{\textcircled{}} \) to play back the movie. Another option is to select a picture with the movie icon (\( \text{\textcircled{}} \)), and press \( \text{\textcircled{}} \) to play back the movie.

### Operations during movie playback

- \( \text{\textcircled{}} \): Increases the volume.
- \( \text{\textcircled{}} \): Reduces the volume.
- \( \text{\textcircled{}} \): Each time you press the button, the playback speed changes in the following order: 2×; 20×; and back to 1×.
- \( \text{\textcircled{}} \): Plays the movie in reverse. Each time you press the button, the playback speed changes in the following order: 2×; 20×; and back to 1×.
- \( \text{\textcircled{}} \) to pause the playback.

### Operations during pause

- \( \text{\textcircled{}} \): Displays the first frame.
- \( \text{\textcircled{}} \): Displays the last frame.
- \( \text{\textcircled{}} \): Displays the next frame.
- \( \text{\textcircled{}} \): Displays the previous frame.
- To resume the movie, press \( \text{\textcircled{}} \).
- To cancel the playback of the movie in the middle of it or during pause, press the \( \text{MENU} \) button.
3 CALENDAR Playing back the pictures in a calendar format

This function lets you play back the pictures in a calendar format by the date of recording.

“Zoom button Zooming while shooting/close-up playback” (P. 11)

4 INDEX Viewing the pictures as a thumbnail

This function lets you view the pictures in 9 frames at the same time.

“Zoom button Zooming while shooting/close-up playback” (P. 11)

5 EDIT

This function lets you edit still pictures saved on a card and store them as new pictures.

Changing the size of pictures

<table>
<thead>
<tr>
<th>Size</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>640 × 480</td>
<td>/320 × 240</td>
</tr>
</tbody>
</table>

This changes the image size of a picture and saves it as a new file.

Cropping a picture

Crop a picture, and save the cropped picture as a new picture.

- Use the arrow pad (△ ▽ ◀ ▶) or zoom button, adjust the position and size of the area-selection box and press the OK button.

REDEYE FIX Fixing the red-eye in pictures

This function corrects the red-eye look that often occurs when taking pictures with a flash.

BLACK & WHITE Changing pictures to black and white

This changes the picture to black and white and saves it as a new file.

SEPIA Changing pictures to a sepia tone

This changes the picture to sepia and saves it as a new file.
FRAME ............................................................ Synthesize the frame and the picture
This function lets you select the frame, and synthesize the frame and the picture, and store it as a new picture.

- Select a frame with ▶ and press □.
- Select the picture to be synthesized with the frame with ▶, and press □. (Press △ to turn the picture 90 degrees clockwise or 90 degrees counterclockwise.)
- Press the arrow pad (△ ◄) and the zoom button to adjust the position and size of the picture, and press □.

TITLE .............................................................. Synthesize the title and the picture
This function lets you select the title, synthesize the title and the picture, and store it as a new picture.

- Select the picture with ▶, and press □.
- Select the title with ▶, and press □. (Press △ to turn the title 90 degrees clockwise or 90 degrees counterclockwise.)
- Press the arrow pad (△ ◄) and the zoom button to adjust the position and size of the picture, and press □.
- Set the color of the title with the arrow pad (△ ◄), and press □.

CALENDAR ...................................... Synthesize the calendar using the picture
This function lets you select the calendar, synthesize the calendar and the picture, and store it as a new picture.

- Select the picture with ▶, and press □.
- Select the calendar with ▶, and press □. (Press △ to turn the picture 90 degrees clockwise or 90 degrees counterclockwise.)
- Set the date of the calendar, and press □.

LAYOUT ......................................................... Making a layout of several recorded pictures

<table>
<thead>
<tr>
<th>ALL IMAGES</th>
<th>Layout of the all pictures stored in the card will be made.</th>
</tr>
</thead>
<tbody>
<tr>
<td>ALBUM</td>
<td>The picture you want to make layout is selected from the album.</td>
</tr>
<tr>
<td>CALENDAR</td>
<td>A monthly calendar appears and the pictures you want to make layout are selected by the date.</td>
</tr>
<tr>
<td>SEL. IMAGE</td>
<td>Pictures that you want to make layout are specified one by one.</td>
</tr>
</tbody>
</table>

- Use ▶ to select a layout pattern and press □.
- Select the picture type you want to make layout and press □.
- Select the picture and press □. (When [SEL. IMAGE] is selected, press △ ◄ to turn the picture 90 degrees clockwise or 90 degrees counterclockwise.)
**BRIGHTNESS**........................................... *Change the brightness of the picture*
This function lets you adjust the brightness of the picture, and store it as a new picture.

- Select the picture with <, and press ◼.
- Adjust the brightness with ▲▼, and press ◼.

**SATURATION**............................................. *Change the vividness of the picture*
This function lets you adjust the vividness of the picture, and store it as a new picture.

- Select the picture with <, and press ◼.
- Adjust the vividness with ▲▼, and press ◼.

**INDEX**.......................................................... *Making an index picture from a movie*
This extract 9 frames from a movie and saves them as a new picture (INDEX).

- Use < to select a movie and press ◼.
- Use the arrow pad (▲▼<>) to select the head frame and press ◼. Select the last frame in the same way and press ◼.

**EDIT** ...................................................................... *Cutting a part of the movie*
Select a part of the movie you wish to save, overwrite the original file with it, or save it as a new file.

- Select [NEW FILE] or [OVERWRITE] and press ◼.
- Use the arrow pad (▲▼<>) to select the head frame and press ◼. Select the last frame in the same way and press ◼. Your selection is now saved.
This function allows you to save printing data (the number of prints and the date and time information) with the pictures stored on the card.

“Print settings (DPOF)” (P. 46)

### 7 PLAYBACK MENU

**Protecting pictures**

Protected pictures cannot be erased with [ERASE]/[SEL.IMAGE]/[ALL ERASE], but they are all erased by formatting.

- Select the picture with ‹〉, and protect it by selecting [ON] with ▲▼. You can protect several frames in succession.

**Rotating pictures**

Pictures taken with the camera held vertically are displayed horizontally. This function lets you turn such pictures so that they are displayed vertically. New picture orientations are saved even when the power is turned off.

**Adding sound to still pictures**

Sound is recorded for about 4 seconds.

- When [START] is displayed, aim the camera microphone at the source of the sound you want to record, and press ●.
- Recording starts and the [BUSY] bar is displayed during recording.
ALBUM ENTRY .............................................................................................................. Adding pictures to an album

Pictures recorded to the card can be organized by sorting them into albums. Pictures stored in the internal memory cannot be entered in albums.

“Album playback menus” (P. 32)

Select the album entry method

Select an album to add the pictures

[SEL. IMAGE]

Select one frame at a time for entry
• Use the arrow pad (△ ▽ ◀ ▶) to select a picture, and press to add ✓.
• Press (・) again to cancel the selection.
• When the selection is completed, press (・) for a while.

Add pictures taken on the same day
Use the arrow pad (△ ▽ ◀ ▶) to select the date with pictures to enter in the album, and press (・).

[SET CALENDAR]

[SET ALL]

Select all still images, all protected images, or all movies

Select the album entry method

Select an album to add the pictures

[SEL. IMAGE]
Protected pictures cannot be erased. Cancel protection before erasing protected pictures. Once erased, pictures cannot be restored. Check each picture before erasing to avoid accidentally erasing pictures you want to keep.

- When erasing the picture in the internal memory, do not insert the card into the camera.
- When erasing the picture from the card, insert a card into the camera in advance.

**SEL. IMAGE** ................................................ Erase by selecting the single-frame

- Use the arrow pad (△ ▽ ◄ ►) to select the picture, and press (✓) to put ✓.
- To cancel the selection, press (✓) again.
- When the selection is completed, press (✓) button.
- Select [YES], and press (✓).

**ALL ERASE**................. Erase all the pictures in the internal memory and the card

- Select [YES], and press (✓).

**9 ALBUM**  See the pictures registered in the album

Use the arrow pad (△ ▽ ◄ ►) to select an album, and press (✓).

Use the arrow pad (△ ▽ ◄ ►) to display picture you want.

**MEMORY FORMAT (FORMAT)**........... Formatting the internal memory or card

All existing data, including protected pictures, are erased when the internal memory or card is formatted. Make sure that you save or transfer important data to a computer before formatting the card.

- Make sure there is no card inserted in the camera when formatting the internal memory.
- When the internal memory is formatted, the data of the frames and titles downloaded with the provided OLYMPUS Master software will be deleted.
- Be sure that the card is inserted in the camera when formatting the card.
- Before using non-Olympus cards or cards which have been formatted on a computer, you must format them with this camera.

**BACKUP**.......................... Copying pictures in the internal memory to the card

Insert the optional card into the camera. Copying data does not erase the picture in the internal memory.

- It takes some time to back up data. Check if the battery is not empty before starting the copy, or use the AC adapter.
You can select a language for on-screen display. Available languages vary depending on the area where you purchased this camera. You can add other languages to your camera with the provided OLYMPUS Master software.

**PW ON SETUP**.......................... Setting the startup screen and volume

<table>
<thead>
<tr>
<th>SCREEN</th>
<th>OFF (No picture is displayed.) / 1 / 2 (The picture registered with [SCREEN SETUP] is displayed.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>VOLUME</td>
<td>OFF (No sound) / LOW / HIGH</td>
</tr>
</tbody>
</table>

You can select the volume level and the picture displayed when the camera is turned on. If [SCREEN] is set to [OFF], [VOLUME] cannot be set.

**SCREEN SETUP**....................... Registering a picture as the startup screen

Still pictures in the internal memory or the card can be registered to screen [2] for [PW ON SETUP].

If a picture is already registered, the [IMAGE EXISTING] screen is displayed asking if you want to cancel the currently registered picture and register a new one.

**COLOR**................................. Setting the color of the menu screens

| NORMAL / BLUE / BLACK / PINK |

**BEEP**................................. Adjusting the volume of beep when button is pressed

| OFF (No sound) / LOW / HIGH |

**SHUTTER SOUND**..................... Selecting the sound of the shutter button

<thead>
<tr>
<th>OFF (No sound)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 LOW / HIGH</td>
</tr>
<tr>
<td>2 LOW / HIGH</td>
</tr>
<tr>
<td>3 LOW / HIGH</td>
</tr>
</tbody>
</table>
Menu operations

VOLUME........................................... Adjusting the volume during playback

OFF (No sound) / 1 / 2 / 3 / 4 / 5

REC VIEW.................................................. Viewing pictures immediately

OFF  The picture being recorded is not displayed. This is useful when you want to prepare for your next shot while the previous picture is being recorded.

ON  The picture being recorded is displayed. This is useful for making a brief check of the picture you have just taken. You can resume shooting while the picture is still being displayed.

FILE NAME.............................................. Resetting the file names of pictures

RESET  This method is useful when grouping files on separate cards. The file number and folder number are reset every time a new card is inserted in the camera. The folder number returns to [No. 100] and the file number returns to [No. 0001].

AUTO  This method is useful when you want to manage all your files with sequential numbers. Even if a new card is inserted, the folder number and file number are retained from the previous card. This helps you to manage multiple cards.

File names and their folder names for recorded pictures are automatically generated by the camera. File names and folder names respectively include file numbers (0001 to 9999) and folder names (100 to 999), and are named as follows.

```
\D C I M \* * * O L Y M P \P m d d ** **. j p g
```

- **Folder name**
  - 
  - **File name**
  - **Month** (1 – C)
  - **File No.** (0001 – 9999)
  - **Folder No.** (100 – 999)
  - **Day** (01 – 31)

PIXEL MAPPING .................................... Adjusting the image processing function

The pixel mapping feature allows the camera to check and adjust the CCD and image processing functions. It is not necessary to operate this function frequently. Approximately once a year is recommended. Wait at least one minute after taking or viewing pictures to allow the pixel mapping function to perform properly. If you turn the camera off during pixel mapping, start again.

Select [PIXEL MAPPING]. When [START] is displayed, press 📷.
Adjusting the monitor brightness

Press \(\circ\) after setting is complete.
\(\triangle\) : Brightens the monitor. \(\triangledown\) : Darkens the monitor.

Setting the date and time

The date and time is saved with each image, and is used in the file name.

- The first two digits of the year are fixed.
- The time is displayed in the 24-hour format.
- For a more accurate setting, press \(\circ\) when the time signal hits 00 seconds.

DUALTIME ............................................ Setting the date and time in another time zone

<table>
<thead>
<tr>
<th>OFF</th>
<th>Switches to the date and time set in [(\circ)].</th>
</tr>
</thead>
<tbody>
<tr>
<td>ON</td>
<td>Switches to the date and time set in [DUALTIME]. When setting the dual time, select [ON], and then set the time.</td>
</tr>
</tbody>
</table>

\(\triangledown\) : Select the date format (Y-M-D, M-D-Y, D-M-Y).
\(\triangledown\) : Sets the date and time.

\(\triangleright\) : Moves to the previous or next setting.

- The date format is the same as that set with [\(\circ\)].
- The first two digits of the year are fixed.
- The time is displayed in the 24-hour format.
- For a more accurate setting, press \(\circ\) when the time signal hits 00 seconds.
Setting alarms

- When [ ] has not been set, [ALARM CLOCK] is not available.
- When [DUALTIME] is set to [ON], the alarm sounds according to the dual time date and time setting.

Setting an alarm

- Select [ONE TIME] or [DAILY], and set the alarm time.
- You can set snooze or alarm sounds and volume.

<table>
<thead>
<tr>
<th>ALARM CLOCK</th>
<th>OFF No alarm is set or alarm is canceled.</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>ONE TIME Alarm is activated once.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>DAILY Alarm is activated daily at the set time.</td>
<td></td>
</tr>
</tbody>
</table>

- When [SNOOZE] is set to [ON] at this time, the setting will be canceled. When [SNOOZE] is [OFF], the alarm stops automatically and the camera turns off after 1 minute of no operation.

Operating, shutting off and checking the alarm

- Operating the alarm:
  Turn off the camera. The alarm only operates when the camera is off.

- Shutting off the alarm:
  While the alarm is sounding, press any button to shut off the alarm and turn off the camera. Note that pressing the POWER button will turn the camera on.
  When [SNOOZE] is set to [ON] at this time, the setting will be canceled. When [SNOOZE] is [OFF], the alarm stops automatically and the camera turns off after 1 minute of no operation.

- Checking the alarm settings:
  While the camera is off, press the DISP button to display the set alarm time and the current time for 3 seconds.
Playing back pictures on a TV

**VIDEO OUT**

<table>
<thead>
<tr>
<th>NTSC  /  PAL</th>
</tr>
</thead>
<tbody>
<tr>
<td>The factory default settings differ according to the region where the camera is sold.</td>
</tr>
</tbody>
</table>

To play back camera images on a TV, set the video output according to your TV’s video signal type.

- **TV video signal types by country/region**
  - NTSC: North America, Taiwan, Korea, Japan
  - PAL: European countries, China

### Playing back pictures on a TV

1. Turn off the camera and the TV before connecting.
2. Connect to the TV’s video input (yellow) and audio input (white) terminals.
3. **Settings on the camera**
   - Set the mode dial to \( \mathbb{M} \), and press the **POWER** button to turn the camera on.
   - The last picture taken is displayed on the TV. Use the arrow pad (↑↓←→) to select the picture you want to display.
4. **Settings on the TV**
   - Turn the TV on, and set it to video input mode.
   - For details of switching to video input, refer to your TV’s instruction manual.

### Display the histogram

<table>
<thead>
<tr>
<th>OFF  /  ON</th>
</tr>
</thead>
<tbody>
<tr>
<td>Set the display or nondisplay of the histogram when ( \text{DISP} ) button is pressed in shooting mode.</td>

</thead>
<tbody>
<tr>
<td>Set the display or nondisplay and the type of frame assist to be displayed when ( \text{DISP} ) button is pressed in shooting mode.</td>
</tr>
</tbody>
</table>
3 Printing pictures

You can print out the pictures you have taken. If you print the pictures at home, you can either connect the camera directly to the printer or you can connect the camera to a computer and download the pictures to the computer first.

If you go to a photo store, it is a good idea to store the print reservation data on the card first. With print reservation, you can print out pictures easily either at home using a personal DPOF-compatible printer or at a photo store that supports DPOF. DPOF is a standard format used to record automatic print information from digital cameras. It allows you to store data such as which pictures you want to print and the number of prints so that you can print pictures automatically at home or at a photo store.

This chapter explains direct printing and print reservations.
Direct printing (PictBridge)

Using the direct printing function

By connecting the camera to a PictBridge-compatible printer, you can print out pictures directly. Select the pictures you want to print and the number of prints on the camera’s monitor.
To find out if your printer is compatible with PictBridge, refer to the printer’s instruction manual.

What is PictBridge?
A standard for connecting digital cameras and printers of different makers and printing out pictures directly.

- Available printing modes, paper sizes etc., vary depending on the printer you use. Refer to the instruction manual for your printer.
- For details of printing paper types, ink cassettes, etc., refer to the printer’s instruction manual.

EASY PRINT

[EASY PRINT] can be used to print out the picture displayed on the monitor. The selected picture is printed using the standard settings of your printer. The date and file name are not printed.

STANDARD
All printers that support PictBridge have standard print settings. If [STANDARD] is selected on the settings screens (P.43 to 44), pictures are printed according to these settings. Refer to the printer’s instruction manual for its standard settings or contact the printer manufacturer.

1 In playback mode, display the picture you want to print out on the LCD monitor.

2 Turn the printer on and plug the USB cable provided with the camera into the multi-connector of the camera and the printer’s USB port.

- The [EASY PRINT START] screen is displayed.
- For details of how to turn the printer on and the position of the USB port, refer to the printer’s instruction manual.
3 Press \(\text{Print/Button}\) button.

- Printing starts.

- When printing is finished, the picture selection screen is displayed. To print another picture, press \(<\) to select a picture, and press \(\text{Print/Button}\).

- When you are finished, disconnect the USB cable from the camera with the picture selection screen displayed.

4 Remove the USB cable from the camera.

5 Remove the USB cable from the printer.

You can use [EASY PRINT] even when the camera is turned off or in shooting mode. With the camera turned off or in shooting mode, connect the USB cable. The selection screen for the USB connection is displayed. Select [EASY PRINT].

- “EASY PRINT” Step 3 (P. 42), “CUSTOM PRINT” Step 2 (P. 43)
Other print modes and print settings (CUSTOM PRINT)

1. Display the screen being indicated on the right according to the procedure 1 and 2 in P. 41, and press  

2. Select [CUSTOM PRINT], and press  

3. Make the print settings according to the operation guide.

Selecting the picture to print

| ALL IMAGES | Allows you to select from all pictures in the card to print. |
| ALBUM | Select an album and the pictures in the album to print. (available only when a card is inserted) |

Selecting a print mode

| PRINT | Prints the selected picture. |
| ALL PRINT | Prints all the pictures stored in the internal memory or the card. |
| MULTI PRINT | Prints one picture in multiple layout format. |
| ALL INDEX | Prints an index of all the pictures stored in the internal memory or the card. |
| PRINT ORDER | Prints the pictures according to the print reservation data on the card. If no print reservations have been made, this option is not available. |

<td>Press the arrow pad (△□△) or zoom button, adjust the position and size of the trimming box and press (○). Then the trimmed picture will be printed out.</td>
</tr>
</tbody>
</table>
4 Select [OK], and press \(\textcircled{○}\).

- Printing starts.
- When printing is finished, the [PRINT MODE SELECT] screen is displayed.

To cancel printing

5 In the [PRINT MODE SELECT] screen, press MENU button.

- A message is displayed.

6 Disconnect the USB cable from the camera.

- The camera turns off.

7 Disconnect the USB cable from the printer.
Print settings (DPOF)

How to make print reservations

Print reservation allows you to save printing data (the number of prints and the date and time information) with the pictures stored on the card.

Only the images stored on the card can be reserved to print. Insert a card with recorded pictures into the camera before making print reservations.

Pictures with print reservations can be printed using the following procedures.

**Printing using a DPOF-compatible photo store.**

You can print the pictures using the print reservation data.

**Printing using a DPOF-compatible printer.**

Printing is possible directly from a card containing print reservation data, without using a computer. For more details, refer to the printer’s instruction manual. A PC card adapter may also be necessary.

**Note**

- DPOF reservations set by another device cannot be changed by this camera. Make changes using the original device. If a card contains DPOF reservations set by another device, entering reservations using this camera may overwrite the previous reservations.
- Not all functions may be available on all printers, or at all photo stores.

**To use print services without using DPOF**

- Pictures stored in the internal memory cannot be printed at a photo store. The pictures need to be copied to a card before taking them.
  
  “BACKUP Copying pictures in the internal memory to the card” (P. 34)
Follow the operation guide to make a print reservation for a selected picture.

1. **Press the MENU button in the playback mode and display the top menu.**

2. **Select [PRINT ORDER] \(\Rightarrow [\text{ ]}\), and press .**
   - Playing back the album: Top menu \(\Rightarrow [\text{PRINT ORDER}] \Rightarrow [\text{ ]}\)

3. **Press \(\llbracket\) to select the frames for print reservations, and then press \(\llbracket\) to set the number of prints.**

   **To trim the picture**
   - Press the zoom button to display the trimming box.
   - Press the arrow pad \((\uparrow\downarrow\leftarrow\Rightarrow)\) or zoom button, adjust the position and size of the trimming box and press .
   - You cannot make print reservations for pictures with .
   - Repeat Step 3 to make print reservations for other pictures.

4. **When you finish making print reservations, press .**

5. **Select the date and time print setting, and press .**
   - NO The pictures are printed without the date and time.
   - DATE The selected pictures are printed with the shooting date.
   - TIME The selected pictures are printed with the shooting time.

6. **Select [SET], and press .**
**All-frame reservation**

Reserves all the pictures stored on the card. The number of prints is set at one print per picture.

1. Press the MENU button in the playback mode and display the top menu.

2. Select [PRINT ORDER] ➤ [ALL], and press (OK).
   - Playing back the album: Top menu ➤ [PRINT ORDER] ➤ [ALL]

3. Select the date and time setting, and press (OK).
   - NO The pictures are printed without the date and time.
   - DATE All pictures are printed with the shooting date.
   - TIME All pictures are printed with the shooting time.

4. Select [SET], and press (OK).

**Resetting print reservation data**

You can reset all the print reservation data or just for selected pictures.

1. Select top menu ➤ [PRINT ORDER], and press (OK).
   - Playing back the album: Top menu ➤ [PRINT ORDER]

To reset the print reservation data for all the pictures

2. Select [OK] or [ALL], and press (OK).

3. Select [RESET], and press (OK).

To reset the print reservation data for a selected picture

2. Select [OK], and press (OK).

3. Select [KEEP], and press (OK).

4. Press (Up) to select the picture with the print reservations you want to cancel, and press (Down) to decrease the number of prints to 0.
   - Repeat Step 4 to cancel print reservations for other pictures.

5. When you are finished canceling print reservations, press (OK).

6. Select the date and time setting, and press (OK).
   - The setting is applied to the remaining pictures with print reservations.

7. Select [SET], and press (OK).
4 Connecting the camera to a computer

Flow

Using the USB cable provided with your camera, you can connect the camera and computer and download (transfer) the images to your computer using the OLYMPUS Master software, also provided with the camera.

Prepare the following items before starting.

- OLYMPUS Master CD-ROM
- USB cable

Install the OLYMPUS Master software  P. 50

Connect the camera to the computer using the USB cable  P. 53

Start up the OLYMPUS Master software  P. 54

Download image files to the computer  P. 55

Disconnect the camera from the computer  P. 55

Using OLYMPUS Master

What is OLYMPUS Master?

OLYMPUS Master is application software for editing images taken with a digital camera on a computer. Installing it on your computer lets you do the following:

- Download images from the camera or other media
- View images and movies
  You can run a slideshow and play back sound.
- Manage images
  You can organize your images using the calendar display. Search the image you want by date or keyword.
- Edit images
  You can rotate images, trim them and change the size.
- Edit images with the filter and correction functions

- Print images
  You can print images and make indexes, calendars and postcards.
- Make panoramic images
  You can make panoramic images using pictures taken in panorama mode.

For details of other functions and operations, refer to the “Help” guide and OLYMPUS Master reference manual.
### Install the OLYMPUS Master software

Before installing the OLYMPUS Master software, please confirm that your computer is compatible with the following system requirements. For newer operating systems, please refer to the Olympus web site as shown on the back cover of this manual.

#### Operating environment

**Windows**

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>OS</td>
<td>Windows 98SE/Me/2000 Professional/XP</td>
</tr>
<tr>
<td>CPU</td>
<td>Pentium III 500 MHz or later</td>
</tr>
<tr>
<td>RAM</td>
<td>128 MB or more (at least 256 MB is recommended)</td>
</tr>
<tr>
<td>Hard disk capacity</td>
<td>300 MB or more</td>
</tr>
<tr>
<td>Connector</td>
<td>USB port</td>
</tr>
<tr>
<td>Monitor</td>
<td>1,024 × 768 pixels, 65,536 colors or more</td>
</tr>
</tbody>
</table>

⚠️ **Note**

- Data transfer is only guaranteed on computers with a factory installed OS.
- To install the software in Windows 2000 Professional/XP, you must log on as a user with administrators’ privileges.
- Internet Explorer and QuickTime 6 or later should be installed on your computer.
- If you are using Windows 98SE, the USB driver is installed automatically.

**Macintosh**

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>OS</td>
<td>Mac OS X 10.2 or later</td>
</tr>
<tr>
<td>CPU</td>
<td>Power PC G3 500 MHz or later</td>
</tr>
<tr>
<td>RAM</td>
<td>128 MB or more (at least 256 MB is recommended)</td>
</tr>
<tr>
<td>Hard disk capacity</td>
<td>300 MB or more</td>
</tr>
<tr>
<td>Connector</td>
<td>USB port</td>
</tr>
<tr>
<td>Monitor</td>
<td>1,024 × 768 pixels, 32,000 colors or more</td>
</tr>
</tbody>
</table>

⚠️ **Note**

- Operation is only guaranteed on a Macintosh equipped with a built-in USB port.
- QuickTime 6 or later and Safari 1.0 or later must be installed.
- Be sure to remove the media (drag & drop onto the trash icon) before performing the following operations. Failure to do so could result in unstable computer operation and the need to reboot.
- Disconnect the cable connecting the camera to the computer
- Turn off the camera
- Open the camera’s battery compartment/card cover
Connecting the camera to a computer

Windows

1 Insert the CD-ROM into the CD-ROM drive.
   • The OLYMPUS Master setup screen is displayed.
   • If the screen is not displayed, double-click the “My Computer” icon and click the CD-ROM icon.

2 Click “OLYMPUS Master”.
   • The QuickTime installation screen is displayed.
   • QuickTime is required to use OLYMPUS Master. If the QuickTime screen is not displayed, QuickTime 6 or later is already installed on the computer. In this case, go to step 4.

3 Click “Next” and follow the on-screen instructions.
   • When the QuickTime licensing agreement is displayed, read the agreement and click “Agree” to proceed with the installation.
   • The OLYMPUS Master installation screen is displayed.

4 Follow the on-screen instructions.
   • When the OLYMPUS Master licensing agreement is displayed, read the agreement and click “Yes” to proceed with the installation.
   • When the “User Information” dialog box is displayed, enter your “Name” and “OLYMPUS Master Serial Number”; select your region and click “Next”. Refer to the sticker on the CD-ROM package for the serial number.
   • When the DirectX licensing agreement is displayed, read the agreement and click “Yes”.

51
• A screen asking whether or not you want to install Adobe Reader is displayed. Adobe Reader is required to read the OLYMPUS Master instruction manual. If this screen is not displayed, Adobe Reader is already installed on your computer. To install Adobe Reader, click “OK”.

5 Follow the on-screen instructions.
• The screen confirming that installation is completed is displayed. Click “Finish”.

6 Select the option to restart immediately when the screen asking you if you wish to restart the computer is displayed and click “OK”.
• The computer restarts.
• Remove the CD-ROM from the CD-ROM drive and store it.

Macintosh

1 Insert the CD-ROM into the CD-ROM drive.
• The CD-ROM window is displayed.
• If the CD-ROM window is not displayed, double-click the CD-ROM icon on the desktop.

2 Double-click on the desired language folder.

3 Double-click the “Installer” icon.
• The OLYMPUS Master installer starts up.
• Follow the on-screen instructions.
• When the OLYMPUS Master licensing agreement is displayed, read the agreement and click “Continue” and then “Agree” to proceed with the installation.
• The screen confirming that installation is completed is displayed.

4 Click “Finish”.
• The first screen is displayed.

5 Click “Restart”.
• The computer restarts.
• Remove the CD-ROM from the CD-ROM drive and store it.
Connecting the camera to a computer

1 Make sure the camera is turned off.
   • The monitor is off.
   • The lens is retracted.

2 Connect the multi-connector on the camera to the USB port on the computer using the provided USB cable.
   • Refer to your computer’s instruction manual to locate the position of the USB port.
   • The camera turns on automatically.
   • The monitor turns on and the selection screen for the USB connection is displayed.

3 Select [PC], and press "SET".

4 The camera is recognized by the computer.
   • Windows
     When you connect the camera to your computer for the first time, the computer attempts to recognize the camera. Click “OK” to exit the message that is displayed. The camera is recognized as a “Removable Disk”.
   • Macintosh
     The iPhoto program is the default application for managing digital images. When you connect your digital camera for the first time, the iPhoto application starts automatically, so close this application and start OLYMPUS Master.

Note
   • The camera functions are disabled while the camera is connected to a computer.
   • Connecting the camera to a computer via a USB hub may cause unstable operation. In this case, do not use a hub, but connect the camera directly to the computer.
Start up the OLYMPUS Master software

Windows

1 Double-click the “OLYMPUS Master” icon on the desktop.
   • The main menu is displayed.
   • When OLYMPUS Master is started up for the first time after installation, the “Registration” dialog box is displayed before the main menu. Follow the prompts and fill in the registration form.

Macintosh

1 Double-click the “OLYMPUS Master” icon in the “OLYMPUS Master” folder.
   • The main menu is displayed.
   • When OLYMPUS Master is started up for the first time, the “User Information” dialog box is displayed before the main menu. Enter your “Name” and “OLYMPUS Master Serial Number”, and select your region.
   • After the “User Information” dialog box, the “Registration” dialog box is displayed. Follow the prompts and fill in the registration form.

OLYMPUS Master main menu

1 “Transfer Images” button
   Downloads images from the camera or other media.
2 “Browse Images” button
   The “Browse” window is displayed.
3 “Online Print” button
   The online print window is displayed.
4 “Print Images at Home” button
   The print menu is displayed.
5 “Create and Share” button
   Displays the editing menu.
6 “Backup Images” button
   Creates backup images.
7 “Upgrade” button
   Displays window for optional upgrade to OLYMPUS Master Plus.

To exit OLYMPUS Master

1 Click “Exit” on the main menu.
   • OLYMPUS Master is exited.
Displaying camera images on a computer

**Downloading and saving images**

1 **Click “Transfer Images” 💼 on the OLYMPUS Master main menu.**
   - The menu for selecting the source is displayed.

2 **Click “From Camera” 📸.**
   - The window for selecting images is displayed. All the images in the camera are displayed.

3 **Select the image files and click “Transfer Images”.**
   - A window indicating that the download is complete is displayed.

4 **Click “Browse images now.”**
   - The downloaded images are displayed in the browse window.
   - To return to the main menu, click “Menu” in the “Browse” window.

**To disconnect the camera**

1 **Make sure that the card access lamp has stopped blinking.**

Card access lamp
2 Make the following preparations for disconnecting the USB cable.

**Windows 98SE**

1. Double-click the “My Computer” icon and right-click the “Removable Disk” icon to display the menu.
2. Click “Eject” on the menu.

**Windows Me/2000/XP**

1. Click the “Unplug or Eject Hardware” icon in the system tray.
2. Click the message that is displayed.
3. When a message is displayed saying that the hardware can be ejected safely, click “OK”.

**Macintosh**

1. The trash icon changes to the eject icon when the “Untitled” or “NO_NAME” icon on the desktop is dragged. Drag and drop it on the eject icon.

3 Disconnect the USB cable from the camera.

**Note**

- Windows Me/2000/XP: When you click “Unplug or Eject Hardware”, a warning message may be displayed. Make sure that image data is not being downloaded from the camera and that all applications are closed. Click the “Unplug or Eject Hardware” icon again and disconnect the cable.
Viewing still pictures and movies

1. Click “Browse Images” on the OLYMPUS Master main menu.
   - The “Browse” window is displayed.

2. Double-click the still picture thumbnail that you want to view.
   - The camera switches to view mode and the picture is enlarged.
   - To return to the main menu, click “Menu” in the “Browse” window.

To view a movie

1. Double-click the movie thumbnail that you want to see in the “Browse” window.
   - The camera switches to view mode and the first frame of the movie is displayed.

2. To play back the movie, click the playback button at the bottom of the screen.

The names and functions of the controller parts are shown below.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1  Playback slider</td>
<td>Move the slider to select a frame.</td>
</tr>
<tr>
<td>2  Time display</td>
<td>Displays the time that has elapsed during playback.</td>
</tr>
<tr>
<td>3  Playback (pause) button</td>
<td>Plays the movie. Functions as the pause button during playback.</td>
</tr>
<tr>
<td>4  Back button</td>
<td>Displays the previous frame.</td>
</tr>
<tr>
<td>5  Forward button</td>
<td>Displays the next frame.</td>
</tr>
<tr>
<td>6  Stop button</td>
<td>Stops playback and returns to the first frame.</td>
</tr>
<tr>
<td>7  Repeat button</td>
<td>Plays the movie repeatedly.</td>
</tr>
<tr>
<td>8  Volume button</td>
<td>Displays the volume adjustment slider.</td>
</tr>
</tbody>
</table>
Printing pictures

Pictures can be printed from the photo, index, postcard and calendar menus. The explanation below uses the photo menu.

1. Click “Print Images at Home” on the OLYMPUS Master main menu.
   • The print menu is displayed.

2. Click “Photo”.
   • The “Photo Print” window is displayed.

3. Click “Settings” in the “Photo Print” window.
   • The printer settings screen is displayed.
     Make the necessary printer settings.

4. Select a layout and size.
   • To print the date and time with your image, check the box next to “Print Date”, and select between “Date” and “Date & Time”.

5. Select the thumbnail image that you want to print and click “Add”.
   • A preview of the selected image is displayed on the layout.

6. Select the number of copies.
7 Click “Print”.
   • Printing starts.
   • To return to the main menu, click “Menu” in the “Photo Print” window.

To download and save images to a computer without using OLYMPUS Master

This camera is compatible with USB mass storage. You can connect the camera to your computer using the USB cable provided with the camera to download and save images without using OLYMPUS Master. The following environment is required to use the USB cable to connect the camera to your computer.

**Windows**: Windows 98SE/Me/2000 Professional/XP

**Macintosh**: Mac OS 9.0 to 9.2/X

⚠️ Note

• If your computer is running Windows 98SE, you will need to install the USB driver. Before connecting the camera to your computer with the USB cable, double-click the files from the following folders on the provided OLYMPUS Master CD-ROM.
   (Drive name): \USB\INSTALL.EXE

• Data transfer is not guaranteed in the following environments, even if your computer is equipped with a USB port.
  • Windows 95/98/NT 4.0
  • Windows 98SE upgrades from Windows 95/98
  • Mac OS 8.6 or earlier
  • Computers with a USB port added by means of an extension card, etc.
  • Computers without a factory-installed OS and home-built computers
5 Getting to know your camera better

Shooting tips and information

Tips before you start taking pictures

The camera does not turn on even when a battery is loaded

The battery is not fully charged
• Charge the battery with the charger.

The battery is temporarily unable to function because of the cold
• Battery performance declines in low temperatures, and the charge may not be sufficient to turn on the camera. Remove the battery and warm it by putting it in your pocket for a while.

No picture is taken when the shutter button is pressed

The camera is in sleep mode
• To save battery power, the camera automatically goes into sleep mode and the monitor turns off if there is no operation when the camera is turned on (when the lens is extended and the monitor is on). No picture is taken even if the shutter button is fully pressed in this mode. Operate the zoom button or other buttons to restore the camera from sleep mode before taking a picture. If the camera is left for 15 minutes, it automatically turns off (the lens retracts and the monitor turns off). Press the POWER button to turn the camera on.

The mode dial is set to 
• This is the playback mode for displaying pictures on the monitor. Set the mode dial to a shooting mode.

The mode dial is in the position of GUIDE
• No pictures can be taken when the shooting guide is being displayed. Turn the mode dial and set it to the position other than GUIDE in the shooting mode.

The flash is charging
• Wait until the (flash charge) mark stops blinking before taking the picture.

The memory gauge is full
• No pictures can be taken when the memory gauge is full. Wait until there is space in the memory gauge.

Before taking any pictures (Off)  After taking one picture (Lit)  After taking several pictures (Lit)  Maximum reached (All lit)

Shoot  Shoot  Shoot  Wait
The date and time have not been set
The camera has been used in the same conditions from the time of purchase

- No date and time have been set for the camera at the time of purchase. Set the date and time before using the camera.

“Setting the date and time” (P. 37)

The battery has been pulled out of the camera.
- The date and time settings will be returned to the factory default settings if the camera is left without batteries for approximately 1 day. Before taking important pictures, check that the date and time settings are correct.

Shooting tips

Focusing on the subject
There are several ways to focus, depending on the subject.

When the subject is not in the center of the frame
- Place the subject in the center of the frame, lock the focus on the subject, and then recompose your picture.
- Set [AF MODE] to [iESP].

“AF MODE Changing the focusing area” (P. 23)

The subject is moving quickly
- Focus the camera on a point roughly the same distance away as the subject you want to shoot (by pressing the shutter button halfway), and then recompose your picture and wait for the subject to enter the frame.
Subjects that are difficult to focus on

- Under certain types of conditions, it is difficult to focus using auto focus. The green lamp on the monitor lights, allowing you to check if the focus is locked.

In these cases, focus (focus lock) on an object with high contrast at the same distance as the intended subject, recompose your shot and then take the picture. If the subject has no vertical lines, hold the camera vertically and focus the camera using the focus lock function by pressing the shutter button halfway, and then return the camera to the horizontal position while keeping the button pressed halfway and take the picture.

To shoot a stabilized digital image

Hold the camera in a correct posture and press the shutter button slowly. In addition, pressing the ISO/ button and taking a picture in the SCN mode stabilize the digital image.

The digital images are not stabilized when:
- images are shot using a zooming function of high magnification, i.e., using both optical zoom and digital zoom functions,
- the object is dark and the shutter speed is slow, or
- the flash cannot be used or when a low shutter speed set SCN mode is selected.
Taking pictures without the flash
The flash fires automatically when there is insufficient light. If the subject is too far away, the flash may have no effect. Here is how to take pictures without the flash in this type of situation.

Set the camera to mode
• Because the sensitivity of the CCD increases automatically, you can hold the camera and take pictures in darker places with the flash off.

  “Shooting with digital image stabilization mode” (P. 13)

Increase the [ISO] setting
• Increase the value of the [ISO] setting.

  “ISO Changing the ISO sensitivity” (P. 21)

The picture is too grainy
There are several factors that can cause the picture to appear grainy.

Using the digital zoom to take close-up pictures
• With the digital zoom, part of the image is cropped and enlarged. The greater the magnification, the grainier the picture appears.

  “DIGITAL ZOOM Zooming in on your subject” (P. 22)

Increasing the ISO sensitivity
• When you increase the [ISO] setting, “noise”, which appears as spots of unwanted color or unevenness in the color, can be introduced and give the picture a grainy appearance. This camera is equipped with a function to allow shooting at high sensitivity while suppressing noise; however, increasing the ISO sensitivity creates grainier pictures than when using a lower sensitivity.

  “ISO Changing the ISO sensitivity” (P. 21)

Taking pictures with the correct color
• The reason why there are differences between the colors in a picture and the actual colors taken and the actual color is the light source illuminating the subject. [WB] is the function that allows the camera to determine the correct colors. Normally, the [AUTO] setting provides the optimal white balance, but depending on the subject, it may be better to experiment with changing the [WB] setting.

  • When the subject is in the shade on a sunny day
  • When the subject is illuminated by both natural light and indoor lighting, such as when near a window
  • When there is no white in the center of the frame

  “WB Adjusting the color of a picture” (P. 21)
Taking pictures of a white beach or snow scene

- Take pictures with \[\text{[7]}\] in \textbf{SCN} mode. Suitable for taking pictures on a sunny day at the beach or in the snow.

- Often, bright subjects (such as snow) turn out darker than their natural colors. Adjust \[\text{[\(\triangle\)]}\] toward \[\text{[+]}\] to make these subjects closer to their real shades. Conversely, when you are shooting dark subjects, it can be effective to adjust toward the \[\text{[–]}\]. Sometimes, using the flash may not produce the brightness (exposure) that was intended.

Taking pictures of a subject against backlight

- With \[\text{[ESP/\(\circ\)]}\] set to \[\text{[\(\bullet\)]}\], the picture can be taken based on the brightness at the center of the monitor without being affected by the light in the background.

- Set the flash to \[\text{[\(\hat{\circ}\)]}\] to activate fill-in-flash. You can shoot a subject against backlight without the face of the subject appearing dark. \[\text{[\(\hat{\circ}\)]}\] is effective for shooting against backlight and under fluorescent and other artificial lightening.

Additional shooting tips and information

Increasing the number of pictures that can be taken

There are two ways to record the pictures you take with this camera.

Recording pictures to the internal memory

- Pictures are recorded to the internal memory, and when the number of storable still pictures reaches 0, you must connect the camera to a computer to download the pictures, and then erase the pictures from the internal memory.

Using a card (optional)

- Pictures are recorded to the card when inserted in the camera. When the card is full, you download the pictures to a computer, and then either erase the pictures from the card or use a new card.

- Pictures are not recorded to the internal memory when a card is inserted in the camera. Pictures in the internal memory can be copied to the card using the [BACKUP] function.

- “BACKUP Copying pictures in the internal memory to the card” (P. 34)
  “The card” (P. 79)
Number of storable still pictures and recording length of movies

### Still pictures

<td>160 × 120 (15 frames/sec.)</td>
<td>5 min. 41 sec.</td>
</tr>
</tbody>
</table>

- When the [IMAGE QUALITY] is set to [SHQ], the continuously recording length of the card other than the TypeH is up to approx. 15 seconds.

### Using a new card

- If you use a non-Olympus card or a card used for another application, such as for a computer, the message [CARD ERROR] is displayed. To use this card with this camera, use the [FORMAT] function to format the card.

**Note:** “MEMORY FORMAT (FORMAT) Formatting the internal memory or card” (P. 34)
Lamp indicators

This camera uses several lamps to indicate the camera status.

<table>
<thead>
<tr>
<th>Lamp</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Self-timer lamp</td>
<td>The lamp lights for approximately 10 seconds, blinks for approximately 2 seconds, and then the picture is taken.</td>
</tr>
<tr>
<td>Card access lamp</td>
<td>Blinking: A picture is being recorded, the camera is reading a movie, or images are being downloaded (when connected to a computer).&lt;br&gt;• Do not do any of the following while the card access lamp is blinking. Doing so may prevent the image data from being saved and render the internal memory or card unusable.&lt;br&gt;  • Open the battery compartment/card cover&lt;br&gt;  • Remove the battery.&lt;br&gt;  • Connect or disconnect the AC adapter.</td>
</tr>
<tr>
<td>Green lamp of the LCD monitor</td>
<td>Lit: The focus and exposure are locked.&lt;br&gt;Blinking: The focus and exposure are not locked.&lt;br&gt;• Release your finger from the shutter button, re-position the AF target mark on the subject and press the shutter button halfway again.</td>
</tr>
</tbody>
</table>

Extending the useful life of the battery

• Performing any of the following operations when not actually taking pictures can deplete the battery power.
  • Repeatedly pressing the shutter button halfway
  • Repeatedly using the zoom
  • To save battery power, turn off the camera whenever it is not in use.

Functions that cannot be selected from menus

• Some items may not be selectable from the menus when using the arrow pad (△▽◁○).
  • Items that cannot be set with the current shooting mode
  • Items that cannot be set because of an item that has already been set: [=password], Flash Mode, etc.
  • Items that cannot be set because the pictures taken by other camera will be edited.

• Some functions cannot be used when there is no card in the camera.<br>  [PANORAMA], [PRINT ORDER], [ALBUM ENTRY], [бан], [red], [REDEYE FIX], [BLACK & WHITE], [SEPIA], [FRAME], [TITLE], [CALENDAR], [LAYOUT], [BRIGHTNESS], [SATURATION], [INDEX], [EDIT], [UNDO ENTRY], [SELECT JACKET], [FORMAT], [BACKUP]
Getting to know your camera better

A record mode expresses a combination of desired image size and compression level. Use the following examples to help determine the optimal record mode when shooting.

**To print large images on full-size paper/To edit and process images on a computer**
- [SHQ] or [HQ]

**To print postcard-size images**
- [SQ1]

**To send as an e-mail attachment or post on a web site**
- [SQ2]

“IMAGE QUALITY Changing the image quality” (P. 19)

---

**Selecting the optimal record mode**

**To return the settings of functions to default settings**
- If the settings such as [IMAGE QUALITY] or flash settings (excluding ) and SCN) are changed according to the shooting, the changed settings can be maintained even after the power is turned off. To return the settings to default settings, execute [RESET].

“RESET Change the shooting functions back to default settings” (P. 20)

**Confirming the exposure when the monitor is difficult to see outdoors**

The monitor may be difficult to see and the exposure difficult to confirm when shooting outdoors.

**Press the DISP button repeatedly to display the histogram**
- Set the exposure so that the graph is concentrated on the outer edges and the graph is balanced on both sides.

**How to read the histogram**
1. If the peak fills too much of the frame, the image will appear mostly black.
2. If the peak fills too much of the frame, the image will appear mostly white.
3. The part indicated in green in the histogram shows the luminance distribution within the AF target mark.

“DISP button Changing the information displays /Display the menu guide” (P. 14)
Playback help and troubleshooting tips

To stabilize the blurred picture
If the played back picture is blurred, press the  \(\text{H}\)/\(\text{P}\) button and the  \(\text{O}\) button in this order to stabilize the picture.

Icon

No icon: The image cannot be stabilized.

\(\text{\textbullet\textbullet\textbullet\textbullet}\): The image has already been stabilized or has no blur.

\(\text{\textbullet\textbullet\textbullet\textbullet} \text{\textbullet\textbullet\textbullet\textbullet}\): The image can be stabilized. (In some images, the proper stabilization effect may not be acquired.)

* It may take long time to display the Icon.

The blurred image cannot be stabilized

Some images cannot be stabilized or cannot acquire the proper stabilization effect even if the \(\text{H}/\text{P}\) button is pressed.

The shutter speed is low / the digital image is severely shaken: The recorded picture may not be stabilized or cannot acquire the proper stabilization effect.

Moving object: The image cannot acquire the proper stabilization effect.

In addition, the digital image stabilization mode cannot be activated when:

- the USB cable is connected to the camera,
- the internal memory capacity or the card capacity is insufficient, or
- the image edited by the movie or the PC, or the image shot by the camera other than this camera is selected.

The red-eye cannot be fixed

- Depending on the picture, the red-eye may not be fixed. Also, parts except the eye may be fixed.

The picture cannot be registered in the album

- Up to 100 pictures can be registered in each album.
- The same picture cannot be registered in several albums.
Playback tips

Playing back the picture in the internal memory

- When a card has been inserted in the camera, the picture in the internal memory cannot be played back. Pull out the card before operating the camera.

Understanding the settings and other information of pictures taken

- Play back a picture, and press the DISP button. Press the DISP button repeatedly to change the amount of information displayed.

Quickly displaying a desired picture

- Use the album function. You can create up to 12 albums and enter the pictures on a card to the albums. To view the pictures, set the mode dial to , and then select an album from the top menu to play back. The same picture cannot be entered in multiple albums.

Erasing sound recorded to still pictures

- Once sound is added to a picture, it is not possible to erase the sound. In this case, make a re-recording with silence. Sound recording is not possible if there is insufficient space in the internal memory or on the card.
Viewing pictures on a computer

Viewing the entire picture on a computer screen
The size of the picture displayed on a computer screen changes depending on the computer settings. When the monitor setting is 1,024 × 768 and you are using Internet Explorer to view a picture with an image size of 2,048 × 1,536 at 100%, the entire picture cannot be viewed without scrolling. There are several ways you can view the entire picture on the computer screen.

View the picture using image browsing software
- Install the OLYMPUS Master software from the provided CD-ROM.

Change the monitor setting
- The icons on the computer desktop may be rearranged. For details of changing the settings on your computer, refer to the computer’s instruction manual.
## When you get an error message on the camera...

*1 [] is not available.
*2 Only the picture quality below [2048 x 1536] is available.
*3 The picture quality is fixed to [640 x 480].
*4 Excluding [ ].
### Glossary of terms

**Aperture**
- The adjustable lens opening which controls the amount of light that enters the camera. The larger the aperture, the shorter the depth of field and the fuzzier the background. The smaller the aperture, the greater the depth of field and the sharper the background. Larger aperture values indicate smaller apertures, and smaller aperture values indicate larger apertures.

**CCD (Charge-Coupled Device)**
- This converts light passing through the lens into electrical signals. On this camera, light is picked up and converted into RGB signals to build a single image.

**Contrast Detection Method**
- This is used to measure the distance to the subject. The camera determines if the image is focused by the level of contrast in the subject.

**Conventional Photograph**
- This refers to recording images using silver halide (the method for recording images in conventional, non-digital photography). This system is in contrast to still video and digital photography.

**DCF (Design Rule for Camera File System)**
- A standard for image files by the Japan Electronics and Information Technology Industries Association (JEITA).

**DPOF (Digital Print Order Format)**
- This is for saving desired print settings on digital cameras. By entering which images to print and the number of copies of each, the user can easily have the desired images printed by a printer or print lab that supports the DPOF format.

**Eclipsing (Vignetting)**
- This refers to when an object obscures part of the field of view so that the whole subject is not photographed. Vignetting also refers to when the image seen through the viewfinder does not exactly match the image shot through the objective lens, so the photographed image includes objects not seen through the viewfinder. In addition, vignetting can occur when an incorrect lens hood is used, causing shadowing to appear in the corners of the image.

**ESP (Electro-Selective Pattern) Light Metering/Digital ESP Light Metering**
- This determines the exposure by metering and calculating the light levels in the center and other areas of the image separately.

**EV (Exposure Value)**
- A system for measuring exposure. EV0 is when the aperture is at F1 and the shutter speed is 1 second. The EV then increases by 1 each time the aperture increases by one F stop or the shutter speed increases by one increment. EV can also be used to indicate brightness and ISO.

**Exposure**
- The amount of light used to capture an image. The exposure is determined by the time the shutter is open (shutter speed) and the amount of light that passes through the lens (aperture).

**Image size**
- The size of an image expressed by the number of pixels that make up the image. For instance, a picture taken with an image size of 640 × 480 fills the computer screen when the monitor setting is 640 × 480. However, if the monitor setting is 1,024 × 768, the picture only takes up part of the screen.
ISO
A method for indicating film speed by the International Organization for Standardization (ISO) (ex.gISO100). Higher ISO values indicate greater sensitivity to light, so images can be exposed even in low-light conditions.

JPEG (Joint Photographic Experts Group)
A compression format for still images. Photographs (pictures) taken using this camera are recorded onto the card in JPEG format. By downloading these images to a computer, users can edit them using graphics application software or view the images using an Internet web browser.

NTSC (National Television Systems Committee) / PAL (Phase Alternating Line)
Television formats. NTSC is mainly used in Japan, North America and Korea. PAL is mainly used in Europe and China.

PictBridge
A standard for connecting digital cameras and printers of different makers and printing out pictures directly.

Pixels
A pixel is the smallest unit (dot) used to make up an image. Clear large-sized printed images require millions of pixels.

Program auto
Also called Program AE mode. The camera automatically sets the best shutter speed and aperture for the shot.

Sleep mode
A mode designed to save battery life. The camera automatically enters the sleep mode if you do not operate it for a certain time. To exit the sleep mode, use any button on the camera (shutter button, arrow pad (△▼◁▼), etc.).

TFT (Thin-Film Transistor) Color Monitor
A transistor color monitor constructed using thin-film technology.
Camera care

Cleaning the camera

Exterior:
• Wipe gently with a soft cloth. If the camera is very dirty, soak the cloth in mild soapy water and wring well. Wipe the camera with the damp cloth and then dry it with a dry cloth. If you have used the camera at the beach, use a cloth soaked in clean water and wrung well.

Monitor:
• Wipe gently with a soft cloth.

Lens:
• Blow dust off the lens with a commercial blower, then wipe gently with a lens cleaner.

Battery/Charger:
• Wipe gently with a soft, dry cloth.

⚠️ Note
• Do not use strong solvents such as benzene or alcohol, or chemically treated cloth.
• Mold may form on the lens surface if the lens is left dirty.

Storage
• When storing the camera for extended periods, remove the battery, AC adapter and card, and keep in a cool, dry place that is well ventilated.
• Periodically insert the battery and test the camera functions.

⚠️ Note
• Avoid leaving the camera in places where chemical products are handled since this may result in corrosion.
This camera uses one Olympus lithium ion battery (LI-12B). No other type of batteries can be used.

Power consumption by the camera varies depending on which functions are used. During the conditions described below, power is consumed continuously and the battery becomes exhausted quickly.

- The zoom is used repeatedly.
- The shutter button is pressed halfway repeatedly in shooting mode, activating the auto focus.
- A picture is displayed on the monitor for an extended period of time.
- The camera is connected to a computer or printer.

Using an exhausted battery may cause the camera to turn off without displaying the battery level warning.

The rechargeable battery is not fully charged at the time of purchase. Charge the battery fully with the LI-10C charger before use.

The provided rechargeable battery usually takes approximately 120 minutes to charge.

This camera uses a charger specified by Olympus. Do not use any other type of charger.

The charger can be used within the range of AC 100 V to AC 240 V (50/60 Hz). When using the charger abroad, you may need a plug adapter to convert the plug to the shape of the AC wall outlet. For details, ask at your local electrical shop or travel agent.

Do not use travel voltage converters as they could damage your charger.
Useful use of the accessories

The card

Pictures can be recorded on the optional card. The internal memory and card are the camera’s media for recording pictures, similar to film in a film camera. Pictures recorded to the internal memory or card can be easily erased on the camera or processed using a computer. Unlike portable storage media, the internal memory cannot be removed or exchanged. The number of recordable pictures can be increased by using a card with a larger capacity.

1  Index area
You can use this space to write the contents of the card.

2  Contact area
The part where the data transferred from the camera enters the card.

Compatible cards
xD-Picture Card (16MB – 1GB)

Using the internal memory or card
You can confirm on the monitor whether the internal memory or card is being used during shooting and playback operations.

Shooting mode

Playback mode

Memory indicator
Inserting and removing the card

1  Turn off the camera

2  Open the battery compartment/card cover.

Inserting the card

3  Orient the card as shown, and insert it into the card slot as shown in the illustration.
   • Insert the card straight in.
   • Insert the card until it clicks into place.

Removing the card

3  Push the card all the way in and release slowly.
   • The card protrudes slightly and stops.
   • Grasp the card and remove.

4  Close the battery compartment/card cover.
Note

- The card access lamp blinks while the camera is reading the images. Reading of images may take some time. Do not open the battery compartment/card cover while the card access lamp is blinking. Doing so may damage the data in the internal memory or the card and render the internal memory or card unusable.

AC adapter

An AC adapter is useful for time-consuming tasks such as image downloads to a computer or when running a slideshow for a long period of time. To use an AC adapter for this camera, the multi-adapter (CB-MA1/accessory) is required. Do not use any other AC adapter with this camera.

Note

- Do not remove or load the battery or connect or disconnect the AC adapter or the multi-adapter while the camera is turned on. Doing so could affect the camera’s internal settings or functions.
- The AC adapter can be used within the range of AC 100 V to AC 240 V (50/60 Hz).
- When using abroad, you may need a plug adapter to convert the plug to match the AC wall outlet. For details, ask at your local electrical shop or travel agent.
- Do not use travel voltage converters as they could damage your AC adapter.
- The camera is not water resistant during AC adapter use.
- Be sure to read the instruction manual for the AC adapter.
Safety Precautions

Caution for Usage Environment

- To protect the high-precision technology contained in this product, never leave the camera in the places listed below, no matter if in use or storage:
  - Places where temperatures and/or humidity are high or go through extreme changes. Direct sunlight, beaches, locked cars, or near other heat sources (stove, radiator, etc.) or humidifiers.
  - In sandy or dusty environments.
  - Near flammable items or explosives.
  - In wet places, such as bathrooms or in the rain. When using products with weatherproof designs, read their manuals as well.
  - In places prone to strong vibrations.
  - Never drop the camera or subject it to severe shocks or vibrations.
  - When mounted on a tripod, adjust the position of the camera with the tripod head. Do not twist the camera.
  - Do not touch electric contacts on cameras.
  - Do not leave the camera pointed directly at the sun. This may cause lens or shutter curtain damage, color failure, ghosting on the CCD, or may possibly cause fires.
  - Do not push or pull severely on the lens.
  - Before storing the camera for a long period, remove the battery. Select a cool, dry location for storage to prevent condensation or mold from forming inside the camera. After storage, test the camera by turning it on and pressing the shutter release button to make sure that it is operating normally.
  - Always observe the operating environment restrictions described in the camera’s manual.

Battery Handling Precautions

- This camera uses a lithium ion battery specified by Olympus. Do not use any other type of battery. For safe and proper use, read the battery’s instruction manual carefully before using it.
- If the battery’s terminals get wet or greasy, camera contact failure may result. Wipe the battery well with a dry cloth before use.
- Always charge a battery when using it for the first time, or if it has not been used for a long period.
- When operating the camera with battery power at low temperatures, try to keep the camera and spare battery as warm as possible. A battery that has run down at low temperatures may be restored after it is warmed at room temperature.
- The number of pictures you can take may vary depending on the shooting conditions or battery.
- Before going on a long trip, and especially before traveling abroad, purchase extra batteries. A recommended battery may be difficult to obtain while traveling.
- Please recycle batteries to help save our planet’s resources. When you throw away dead batteries, be sure to cover their terminals and always observe local laws and regulations.
**LCD Monitor**

- Do not push the monitor forcibly; otherwise the image may become vague, resulting in a playback mode failure or damage to the monitor.
- A strip of light may appear on the top/bottom of the monitor, but this is not a malfunction.
- When a subject is viewed diagonally in the camera, the edges may appear zigzagged on the monitor. This is not a malfunction; it will be less noticeable in playback mode.
- In places subject to low temperatures, the LCD monitor may take a long time to turn on or its color may change temporarily. When using the camera in extremely cold places, it is a good idea to occasionally place it in a warm place. An LCD monitor exhibiting poor performance due to low temperatures will recover in normal temperatures.
- The LCD used for the monitor is made with high-precision technology. However, black spots or bright spots of light may appear constantly on the LCD Monitor. Due to its characteristics or the angle at which you are viewing the monitor, the spot may not be uniform in color and brightness. This is not a malfunction.

**Legal and Other Notices**

- Olympus makes no representations or warranties regarding any damages, or benefit expected by using this unit lawfully, or any request from a third person, which are caused by the inappropriate use of this product.
- Olympus makes no representations or warranties regarding any damages or any benefit expected by using this unit lawfully which are caused by erasing picture data.

**Disclaimer of Warranty**

- Olympus makes no representations or warranties, either expressed or implied, by or concerning any content of these written materials or software, and in no event shall be liable for any implied warranty of merchantability or fitness for any particular purpose or for any consequential, incidental or indirect damages (including but not limited to damages for loss of business profits, business interruption and loss of business information) arising from the use or inability to use these written materials or software or equipment. Some countries do not allow the exclusion or limitation of liability for consequential or incidental damages, so the above limitations may not apply to you.
- Olympus reserves all rights to this manual.
Warning

Unauthorized photographing or use of copyrighted material may violate applicable copyright laws. Olympus assumes no responsibility for unauthorized photographing, use or other acts that infringe upon the rights of copyright owners.

FCC Notice

• Radio and Television Interference
   Changes or modifications not expressly approved by the manufacturer may void the user’s authority to operate this equipment. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.
   This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.
   However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
   - Adjust or relocate the receiving antenna.
   - Increase the distance between the camera and receiver.
   - Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
   - Consult your dealer or an experienced radio/TV technician for help. Only the OLYMPUS-supplied USB cable should be used to connect the camera to USB enabled personal computers (PC).

Any unauthorized changes or modifications to this equipment would void the user’s authority to operate.
